Holiday Inn Hotel Elk Grove Village
1000 Busse Road
Elk Grove Village, IL 60007
Phone: (847) 437-6010
Fax: (847) 806-9369
Internet: http://www.hielkgrove.com

Transportation
The nearest airport is the Chicago O'Hare International Airport (ORD). The Holiday Inn Hotel Elk Grove Village provides a complimentary airport shuttle service. Contact the hotel front desk for availability and scheduling.

Call for Papers
Technical papers are solicited for presentation at the 27th Annual ARRL and TAPR Digital Communications Conference to be held September 26-28, 2008 in Chicago, Illinois and publication in the Conference Proceedings. Annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication.
Submission of papers are due by July 31st, 2008 and should be submitted to:
Maty Weinberg, ARRL
225 Main Street
Newington, CT 06111
or via the Internet to maty@...

Details on Call for Papers

Technical papers are solicited for presentation at the ARRL and TAPR Digital Communications Conference for publication in the Conference Proceedings.
Annual conference proceedings are published by the ARRL. Presentation at the conference is not required for publication.
The ARRL and TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work, and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. Topics include, but are not limited to:
* Software defined radio (SDR)
* Digital voice (D-Star, P25, WinDRM, FDMDV, DRMDV, G4GUO)
* Digital satellite communications
* Global position system
* Precise Timing
* Automatic Position Reporting System (APRS)
* Short messaging (a mode of APRS)

* Digital Signal Processing (DSP)
* HF digital modes
* Internet interoperability with Amateur Radio networks
* Spread spectrum
* IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio
* Using TCP/IP networking over Amateur Radio
* Mesh and peer to peer wireless networking
* Emergency and Homeland Defense backup digital communications in Amateur Radio
* Updates on AX.25 and other wireless networking protocols
* Topics that advanced the amateur radio art

1444. DV Dongle Now Available at AES

Yahoo group: IndyHamRadio
Date: 2008-06-09 16:19:43 UTC
From: Mark Thompson
Topic: 1444 Message: 1444

I heard from the AES National Sales Manager today that AES is now selling the DV Dongle and has them in stock. You can reach AES at: 800-558-0411 or www.aeshamcom

More information about the DV Dongle that allows you to use your PC to connect to D-STAR repeaters over
the internet is available at: http://www.dvdongle.com/DV_Dongle/Home.html73, Mark, WB9QZB Chicago, IL

1445. Seymour Red Cross Emergency Communications Center

Yahoo group: IndyHamRadio
Date: 2008-06-10 02:43:28 UTC
From: Shawn Tovey
Topic: 1445 Message: 1445

I want to first thank everyone that has supported, helped, or spent time working with others during this disaster. We have provided and maintained auxiliary communications for the Seymour Red Cross since 9 AM yesterday (Sunday June 08).

On Saturday night at 7PM, Rick Rigsby KC9MVK and I drove to Columbus to set up communications for the Eastside school shelter. Our communications to the EOC helped them evacuate the shelter site. Unfortunately, Eastside school took on water and the gymnasium flooded. We arranged transportation for them to North High School where we went and set up communications after Eastside was evacuated. We were relieved at 6AM and headed back south to Jackson County just prior to the water rising there. We contacted the Seymour Red Cross and they welcomed our presence at Seymour High School. Just after communications was set up there, the "powers that be" realized that they chose a school too close to high waters and relocated the shelter to Seymour Middle School.

As of 4PM today, the shelter was shut down due to inactivity. The last resident left and the Red Cross decided to shut down until another need may arise. We relocated the communications center to the Red Cross office in Seymour and was back online with communications. At that site, we have 2 meter, 70 CM, scanners, cellular, and 2 wireless internet options. The two-way communication equipment is on backup power.

Cellular service has been somewhat overwhelmed and at times not usable. I have received reports that Columbus and Lawrence counties have already experienced cellular outages. There may be more counties. We are also aware of more rain over parts of the state at this time. Due to these reasons, I am recommending that we please maintain the Seymour Red Cross Emergency Communications Center until after this series of storms past. At that time, I believe that we can reassess the need for our center. At that time we will have more information and be able to confidently shut down the center if we have an all clear.

Unfortunately, we have not had much contact from Jackson County EMA or Sheriff's department. All contact required our initiation. We have requested from many different emergency departments to send us updates regarding road closings, evacuation areas, utility service issues, and many other important information. We found out more information online and on TV then from our local county.

I must say that the communications in Bartholomew County has impressed me. They are extremely well organized and most operations are running

smoothly. Many important updates are getting to the community and shelters quickly. I was very impressed that the within 1 hour of our communications to the EOC, they had and evacuation process in play and on site! CARC and others in the area are doing an amazing job! Thank you all for the training that helped us get our operations started here in Jackson County.

We are currently looking for volunteers to keep the center open and manned 24/7. We currently have Matt Pierce from Bloomington on site. He volunteered to drive and take over tonight from 8-4. I am somewhat overwhelmed with family responsibilities and can not stay at the center a full shift at this time. If anyone can volunteer to man the Seymour Red Cross Emergency Communications Center, please call the communications desk phone and have that person schedule you. Our contact information is as follows:

Communications Desk: 502-727-2740
Tactical Cell: 502-727-1631
Shawn's Cell: 502-649-4156
Repeater in use: 147.135+ PL103.5 (KI9G)
Simplex 146.550

Be well, be safe, and thank you all!
Shawn Tovey KC9LII

1447. eLORAN: Inside the Government's Backup Plan for GPS Failure

Yahoo group: IndyHamRadio
Date: 2008-06-10 16:05:47 UTC
From: Dean, Gregory A SSG RES USAR USARC
Topic: 1447 Message: 1447

Lets look at what we have here. Currently we have the Global Navigation Satellite System (GNSS or GPS). Most of us are now familiar with this technology. But are you aware of WAAS (wide area augmentation system)? This is a system on the satellite that makes corrections so that the data is more accurate on your GPS receiver. Differential GPS (DGPS) is a system that is similar to LORAN (ran by the Coast Guard) that provides data correction in parallel with your GPS. What all of these systems (WAAS, DGPS) do is take a known location, compare that to the GPS data then transmit the corrections.

We see survey equipment that provides localized DGPS for survey teams (and centimeter accuracy).

Aviation is moving to LAAS (local area augmentation system) that would provide very accurate data so that aircraft can land under poor visibility.

The Navy has systems in development for ships and this technology is moving towards the civilian market as a replacement for ILS (IFR Cat I, II, III landings).

VORTAC is going away, along with ILS. They are scheduled to be replaced by a GPS/LAAS (local area augmentation system) combination. LORAN-C was scheduled to go away however this new eLORAN looks to merge DGPS and a ground based version of GPS (eLORAN) that could augment GPS. We use old LORAN-C frequencies now for DGPS (100 KHz system coupled with 1500 MHz GPS).

From what I have been able to read, eLORAN will be somewhat different than LORAN-C. Instead of a master and several slaves, the new system will be like GPS in that several stations are used by measuring the time difference from each. Instead of a master-slave in a chain, eLORAN uses all stations that your receiver can hear (like GPS can use all satellites in view). It appears that it will provide DGPS services as well.

Europe is pushing eLORAN due to the control of the GNSS by the US military.

It is a cheaper, land based system that is in the control of many nations.

Harder for terrorists to jam or destroy. Frequencies are between 90-110 KHz with transmitters at 1000 Watts to 1 MW. GPS is about 1500 MHz and milliwatts.

Here are some links that might provide more information. The Coast Guard site has pages on GPS, DGPS and eLORAN.

Inside the Government's Backup Plan for GPS Failure

With the threat of everything from antisatellite weapons to solar flares, the Department of Homeland Security is upgrading an old navigation system to eLORAN to track signals across the country, Lost-style.

LORAN Station, Attu, Alaska: This is the view from the 600-ft. LORAN tower.

By Joe Pappalardo

Published on: June 3, 2008

Satellite-based navigation has become a ubiquitous tool for business, military and personal use. The downside is that any disruption in the Global Positioning System could wreak havoc down on Earth.

This year, the Department of Homeland Security decided that a 30- year-old navigation system used by mariners will be upgraded to back up GPS. The decision preserves the Long-Range Aids to Navigation

(LORAN) network, which has been teetering on the verge of forced retirement since the 1980s, according to the Coast Guard's Navigation Center.

The backbone of LORAN is a network of transmission stations, many located in remote regions, staffed with Coast Guard personnel, and equipped with antennas as tall as 900 ft.

The 2009 DHS budget allocates $34.5 million for the Coast Guard to start upgrading the LORAN system with modern electronics and solid- state transmitters. Users of the enhanced system, called eLORAN, will acquire and track signals from ground stations in much the same way they triangulate signals from multiple satellite feeds.

LORAN also adds a data channel that can handle more detailed information.

The system won't just wait for GPS to fail: eLORAN stations will continually transmit time-keeping data needed for navigation and warnings about coming disruptions.

Why GPS Needs a Backup Plan

Intentional Jamming

Threat: GPS signals use low-powered, high-frequency signals that are easy to block.

eLORAN Fix: Uses high-powered transmitters that send stronger signals requiring more power to disrupt.

Environmental Interference

Threat: Signals from GPS sats need to be in the line of sight of receivers and are blocked by metal, mountains and reinforced concrete.

eLORAN Fix: Terrestrial signals bend around the Earth's curvature and can penetrate urban canyons and dense foliage.

Cosmic Radiation

Threat: Unusually large solar flares can produce radio bursts over the same frequency bands as GPS satellite transmissions.

eLORAN Fix: Cosmic radio waves cannot penetrate the ionosphere, so LORAN signals are immune to interference.

Antisatellite Weapons

Threat: Future ground-based missiles could target and knock out GPS satellites.

eLORAN Fix:Ground stations can be more easily guarded from attacks, including those by missiles.

1448. old ham gear available

Yahoo group: IndyHamRadio
Date: 2008-06-10 20:22:03 UTC
From: Ken Bandy
Topic: 1448 Message: 1448

I received this email today, and thought I would pass it on to as many folks as possible. My apologies if you get multiple copies.

73,
Ken
KC9GLQ

I am trying to find a good home for a bunch of old Ham gear from a grandfather, and long time Ham (W9TXL, Ed Irwin), who recently died.

I am not sure what most of it is but what I have identified are lots of parts and pieces, tubes, switches, capacitors, POTs, etc. A few complete pieces of equipment like an SWR/Power meter, osiliscope calibrator, RF osilator, etc. Antenna parts, a balun, miscellaneous lengths of wire and coax.

My name is Dana Bradbury, I be can reached at 317 972 1755. We are located downtown Indy. Please feel free to pass this on to anyone at your ham club that might find use for this old equipment.

Thanks,

Dana

1450. Support your local repeaters: Marion County.

Yahoo group: IndyHamRadio
Date: 2008-06-12 15:03:49 UTC
From: kc9brz
Topic: 1450 Message: 1450

I live in Marion County, and regularly use several repeaters.

I've sent in contributions and membership fees for a couple groups
that ask for or allow donations/memberships.

I urge other hams to financially support the repeaters they use.

If you use any of these repeaters, "it would be nice" to send in
a donation (to ICE group) or membership (to IRA, or Mid-State).

==========
Indianapolis Carmel Experimenters, W9ICE:
==========

ICE website: http://www.w9ice.com/
ICE membership form: http://www.w9ice.com/donation__form.htm
ICE repeater list: http://www.w9ice.com/repeater1.htm
(Unfortunately, you have to turn on Java to see the info.)

ICE's repeaters:

--- 53.110
--- 146.97
--- 147.39 (d-star)
--- 224.92
--- 224.98
--- 442.65
--- 443.90
--- 444.125 (d-star)
--- 927.9875
--- 1293.50
--- GMRS (not sure which freq/channel)

==========
Indianapolis Repeater Association, W9IRA:
==========

IRA web site: http://www.w9ira.org.
IRA membership form: http://www.w9ira.org/meminfo.htm
IRA repeater info: http://www.w9ira.org/repinfo.htm

IRA's repeaters:
--- 146.70 (located 96th & Ditch, 720' up)
--- 147.12 (with autopatch, located 36th & Arlington)
--- 146.625 (located on top of Lugar Towers downtown)

--- 443.850

==========
Mid-State Amateur Radio Club:

Quoting kc9brz <kc9brz@...>:

> 147.015 + Avon

Actually, Belleville. Repeater is owned by the Hendricks County
Amateur Radio Society.

To your list:

147.165 + Danville
442.900 + Danville
145.130 - 88.5 PL Danville

Also, KC9CTQ has a 440 repeater in Brownsburg, but I can't remember
the frequency. I think it's 444.200 + with either 88.5 or 100.0 PL.

Bob...

1453. "We Do That" with Amateur Radio!

Yahoo group: IndyHamRadio
Date: 2008-06-15 20:40:14 UTC
From: Mark Thompson
Topic: 1453 Message: 1453

http://www.arrl.org/news/stories/2008/06/10/10151/?nc=1
"We Do That" with Amateur Radio!

The third ARRL Public Relations campaign -- We Do That - with Amateur Radio -- celebrates the technology side of ham radio. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, Amateur Radio means many things to many people. "What is it about Amateur Radio that arouses the interest of people?" Pitts asked. "You have the fun, friendship and hobby side. We showcased this side in 2006 with our Hello campaign. You have the emergency service side. We brought this valuable part of Amateur Radio to the public's eye in 2007 with Emergency Radio - Getting the Message through for Your Family and Community. And now you have the technology and creative side. In 2008, we are capitalizing on this third prong, getting word out to the public that there is tons of stuff you can do with Amateur Radio."
Unveiled at the 2008 Dayton Hamvention® this past May, this new coordinated public relations effort shows the world the technological activities and creative imaginations that Amateur Radio's people love. Like the previous public relations campaigns, Pitts said, this is a campaign with several interlocking parts:
Public Service Announcements
There are Public Service Announcements (PSAs) that can be played on commercial radio stations. Check these out on the ARRL Public Information Officer Web site; more will be coming out as the year unfolds. These mp3 files are easily downloaded and can be taken to local radio stations. "Many radio stations have a public service obligation they need to fulfill, and these PSAs are a great way for them to do so, while showcasing the neat things we do as hams," Pitts said.
Brochures
ARRL has created an attractive brochure http://www.arrl.org/brochures/ that celebrates ham technology. This brochure shows hams doing many exciting activities, from Green Radio -- Amateur Radio using renewable energy sources -- to the search for extraterrestrial intelligence (SETI) through time and space itself. These brochures, in packs of 25, are available at no cost except for a small shipping fee.
WeDoThat-Radio.org
A new special Web site has been created just for this campaign. "Maximizing the strong points of the
Hello-Radio http://www.hello-radio.org/hello/ and Emergency-Radio
http://emergency-radio.org/ Web sites before it, WeDoThat-Radio.org uses some of the newer technologies similar to the blog format, allowing for easy topic additions and changes, even providing a place for and visitors to ask questions," Pitts said.
Stickers
Let's admit it, hams and kids like free things and stickers are fun. So we made up a bunch to share. If you happen to have a presentation to students, it's a nice touch. These are "free while the supply lasts," Pitts said.
Talk on a Disk
What began as an experiment in 2007 has since become a major success. The ARRL's Talk on a Disk was quickly snatched up and used by people making presentations to groups. This CD contains all the materials you need to make a good PowerPoint presentation before a non-ham

group, including slides and supportive audio and video. "For 2008, we created a brand new Talk on a Disk highlighting the technology campaign and coordinated with the brochures. It can make almost anyone look good in front of a group. Just follow the script! Or, you can modify it to meet local needs," said Pitts. If you have a presentation to make and want to talk about the technology of ham radio, please e-mail Pitts about it.

Swiss Army Knife for PIOs

The 2008 Knife, Pitts said, is actually a CD with all the basic forms and information a Public Information Officer (PIO) should need -- all in one place. "Last year, we produced more than 1000 of these and they were all snatched up," Pitts said. With audio and video files, documents in computer forms that PIOs can modify to meet local needs, as well as hundreds of pointers and ideas, the Swiss Army Knife for PIOs has become a mainstay for public relations work. Disks are available for PIOs by sending Pitts an e-mail.

Every Ham is a PIO

"There is a saying," Pitts said, "that all news is local -- and it is true. If there is not a local or personal 'hook' to a story, it does not make it into the news. Because of this, the Public Information Officers in your area are critical to the local perception of Amateur Radio." When PIOs take these materials and modify them for local use, it affects everything from antenna regulations to club membership levels.

But it is not just up to the PIOs to achieve positive publicity for hams, Pitts said: "There is another saying, 'Every ham is a PIO.' When people become curious about Amateur Radio they turn to the first ham operator they find and that conversation is crucial to the future. All the brochures, TV ads, radio and news stories are of no benefit if that initial conversation with a potential recruit is not positive. PIOs can only 'bring the fish to the boat.' It is up to every ham to be ready to bring them in by taking the time and effort to make the initial one-on-one contact a positive experience. In the end, 'It takes a ham to make a ham.'"

Need Help?

There is a wealth of materials available http://www.arrl.org/pio for anyone to use. Here you can find background information handouts for media, as well as all sorts of helpful files and tips. Each month, Pitts puts out CONTACT!, an e-zine for ARRL PIOs that contains ideas, information and timely materials. The ARRL Public Relations Committee is also able to aid groups facing unusual problems or situations. These PR veterans have a wealth of knowledge you can draw upon. There is a public relations email reflector where PIOs from around the country share their problems, ideas and successes with other PIOs.

It's Up to You

The energies that your club -- and you as an individual -- put into positive PR work will pay off for your radio future in many ways, Pitts said. "Go show the world that 'It's not just your grandfather's radio anymore.'"

> Gary > KC9GEQ

IRA responded to my membership and sent me the code for the
auto-patch repeater within a couple weeks. Did your friend
let them know she hadn't rec'd a response?

There are plenty of opportunities for mail to get lost,
misdirected, or misplaced without having to blame the sender.

Two stories about how my mail gets lost:

My mail falls about 2 feet from the mail slot in my front door to
the floor, then momentum carries it a couple more feet, and it's
then pushed aside as I open my door to enter. That process seems
to shuffle the items so that envelopes sometimes get inserted
into advertising flyers. I've learned I have to carefully
sift through everything or I'll throw out my real mail with
the advertising flyers.

At my post office, there is a postal worker who hasn't quite
grasped how PO Boxes work. This person fills in for the regular
PO Box stuffer. In the pigeon-hole matrix of the boxes, the box
number is indicated on the edge of the lattice, and indicates
the box number of the pigeon-hole _below_ it. This worker
seems to forget that, and thinks the number corresponds
to the pigeon-hole above it. I can tell when this worker
fills in for the regular person, because I receive the mail
intended for the box below me. The first time I merely
shoved the items back so they fell on the floor inside. The
second time I complained in person, and the counter person
knowingly rolled their eyes and explained.

1455. Announcing D-STAR at Field Day

Yahoo group: IndyHamRadio

Subject: [illinoisdigitalham] Announcing D-STAR at Field Day

D-STAR Field Day!
If you or your club is planning on participating in Field Day this year, then think about also setting up a D-STAR Field Day station and participating in D-STAR Field Day. The rules are similar to Field Day in that is to demonstrate capabilities to others such as Amateur Radio Operators, Public Officials, and even your own Club Officials.
Setting up a D-STAR Field Day Station doesn't take much, a handheld and a log book may be all that is required. Or go all out and setup a Voice, Low Speed Data, and High Speed Data Station.
The rules and more information may be seen at DSTARINFO

 http://www.dstarinfo.com/news/DSTAR_Field_Day.html

We look forward to hearing you during D-STAR Field Day!

Is anyone besides ICOM currently making D-Star equipment?

If not, will ICOM be releasing the technology or the
specs into public domain so others can make D-star equipment?

From: Mark Thompson
Topic: 1455 Message: 1459

D-STAR is an Open Protocol created by the JARL. The specifications
for D-STAR are published & available. Anyone can make radios based on the D-STAR protocol.

Icom happened to be the first manufacturer to make radios & repeaters
to support D-STAR. Icom extended the protocol by designing
& producing an internet gateway connecting D-STAR repeaters together
in a network.

In Japan Kenwood sells a D-STAR radio under the Kenwood
name that is apparently built by Icom.

There is a great deal of innovation occuring in the D-STAR environment.

The DV-Dongle allows a PC user to connect to D-STAR repeaters over the
internet by utilizing the internet gateways.

At Dayton 2007 a ham demonstrated a prototype of a 2m D-STAR radio
he had designed.

At Dayton 2008 a Japanese ham demonstrated an adapter that allows
"narrow-band" FM ham transceivers with a 9600-baud port to be used on D-STAR.

There will be more innovations occuring in the coming years which will
extend the capabilities of the D-STAR environment.

Subject: D-STAR Field Day Update

The days are dwindling. D-STAR Field Day is just about here.

If you haven't heard about it, take a visit to www.DSTARINFO.com for more information.

First, there will be rewards! Icom America has generously offered to donate plaques to the winners of the event. The following plaques will be presented:

- 1st place Overall
- 2nd place Overall
- 1st Place Data Contacts
- 1st Place Bonus Points

So get out this weekend and see if you can get one of these for your club!

We've added some updated information about some suggestions for operating and logging. Please visit www.DSTARINFO.com to download the updated information, as well as the rules.

The goals for D-STAR Field Day is to have fun, show others how to have fun J, and to see just what it is like when we get a lot of people on the air.

A little secret, look at the rules, do a bunch of demonstrations, easiest way to gain points.

Ed Woodrick WA4YIH

Hello,

Having just joined I wanted to send a get acquainted message.

I was first licensed in 1979 as KA4HWX, and currently hold an Extra Class License. I also held KA2JP, while stationed in Japan. I am a Certified W5YI VE, the RACES Officer for Starke County, have held appointments as an Assistant Emergency Coordinator, past President of Wabash Valley Amateur Radio Association, and I re-established the Starke County Amateur Club; and for the past three years was President of the Starke County Club.

Personal Information: I grew up in West Terre Haute, Indiana and married my high school sweetheart in 1970 and then entered the Air Force in 1972. I am a former Special Agent with the Air Force Office of Special Investigations, a graduate of Indiana State University, and currently teach High School English in Knox.

Amateur Radio Operating Activities: DXCC; active DX chaser; HF contester; active in public service communications; and an early packet radio user; enjoys BPSK 31 and RTTY; manages the W9JOZ.org web site and is the Newsletter Editor for the Starke County Amateur Radio Club.

I am also running for the Indiana Section Manager position and look forward to helping out anyone that may have questions about what is going on up here in nothern Indiana.

Hi John

Nice to meet you. Are you a CW operator by any chance? How about QRP?

If you are elected as state section manager, how will you plan on communicating with hams in the central and southern part of the state?

Will you be at the Indy hamfest on July 12th?

See: http://www.indyhamfest.com/SHOW_MAILER.pdf

From: Ray, K9DUR
Topic: 4 Message: 1472

Brian,

I also am running for Indiana Section Manager. It is interesting that both candidates so far are past presidents of the Wabash Valley Amateur Radio Association (WVARA), although I have never had the pleasure of meeting John. He left the Terre Haute area before I moved here.

A little about me:

I have been continuously licensed since 1960, and have held an Amateur Extra class license since February 2000. I am life member of the ARRL, the QCWA, and the WVARA. I am a member of the Hoosier DX and Contest Club, Fists, and the Amateur Radio Lighthouse Society. Along with my late wife, Natalie, K9CAT, I was honored as the Indiana Amateur of the Year by the Indiana Radio Club Council in 2003.

I have previously served as president of both the WVARA and QCWA Chapter #204 and am currently the Treasurer of the Indiana Radio Club Council, the Secretary-Treasurer of QCWA Chapter #204, and serve as the trustee for 2 local clubs. I was appointed an Assistant Division Director by Central Division Director, Dick Eisley, W9GIG, in January, 2004.

I am the VE Team Liaison for the WVARA, overseeing monthly ARRL?VEC-coordinated VE test sessions in Terre Haute, IN, and in Paris, IL. I also assist with the WVARA license classes as an instructor.
My wife Pam, K9JMA, & I are both active with Vigo County ARES and with Illiana Skywarn.

An avid DX'er and contester, I have earned DXCC, WAS, & WAC, and go on several camping trips a year to activate counties for various state QSO parties.

I am a retired software engineer with a BSEE degree from Purdue University and currently reside in West Terre Haute, IN.

To answer your questions to John: If elected, I intend to maintain contact with ARRL members all over the state by participating in e-mail lists such as this one, through monthly e-mail letters, and with special bulletins when warranted. In addition, the fact that I am retired will give me the freedom to attend club meetings and hamfests across the state.

I will be at the Indianapolis Hamfest on July 12th. Look for me at the FlexRadio Systems booth.

73, Ray, K9DUR

1474. RE: [IndyHamRadio] Hello

Yahoo group: IndyHamRadio
Date: 2008-07-02 01:45:13 UTC
From: Ray, K9DUR
Topic: 4 Message: 1474

Dan,

I am already subscribed to the InHam list. Actually, Brian is not the other candidate for Section Manager. The other candidate is John Poindexter, W3ML, from Knox, IN.

Brian and Ray,

And everyone else, for that matter...

I would like to invite you to also subscribe to The Indiana Ham email reflector. There are a lot of subscribers there I'm sure would like to learn about you guys. And I would like to see a lot more traffic about issues relating to Indiana Hams.

You can subscribe here:
http://mailman.qth.net/mailman/listinfo/inham

If anyone has any trouble, I would be more than happy to help.

Good luck to you both,

73

From: John Poindexter
Topic: 4 Message: 1475

Hello Brian,

I plan on keeping in contact through email, bulletins and keeping the web pages up to date; also I will be available via telephone to assist anyone with questions or concerns.

I still work a little CW, but as my hearing is going it gets harder.

I am trying to arrange time to be at the Indy Hamfest.

If elected I plan on working on the following areas and will publish more later on each of these:

Emergency Communication Capabilities
Recruitment of young people
Amateur Radio Education
Expansion of PRB-1 to lift restrictive covenants
Support FCC rules enforcement

From: KB9BVN
Topic: 1477 Message: 1477

IN-ARRL BULLETIN 12-2008
01:55PM EDT 2 JULY 2008 de KB9BVN

Many thanks to John Poindexter W3ML, and Ray Andrews K9DUR, for running for the job of Indiana Section Manager. According to what I have read on the ARRL website, since we have more than one person running for the job, we will have an election this fall. Nominations for this position are closed after September 5th, 2008.

As election time gets closer I will try to get the information out as soon as I get it.

You must be an ARRL member to vote in this election. You can join the ARRL or renew your membership by going to the ARRL website at http://www.arrl.org and signing up there.

From: Mark Thompson
Topic: 1478 Message: 1478

****
U.S. Consumer Product Safety Commission
Office of Information and Public Affairs
Washington, DC 20207

FOR IMMEDIATE RELEASE
July 2, 2008
Release #08-319

Firm's Recall Hotline: (800) 843-7422
CPSC Recall Hotline: (800) 638-2772
CPSC Media Contact: (301) 504-7908

RadioShack Recalls Power Supplies Due to Electrocution and Fire Hazards

WASHINGTON, D.C. - The U.S. Consumer Product Safety Commission, in cooperation with the firm named below, today announced a voluntary recall of the following consumer product. Consumers should stop using recalled products immediately unless otherwise instructed.

Name of Product: 13.8V DC Power Supplies

Units: About 160,000

Importer: RadioShack Corp., of Fort Worth, Texas

Hazard: The recalled power supplies are wired incorrectly, posing electrocution and fire hazards.

Incidents/Injuries: None reported.

Description: The recall involves RadioShack 13.8V DC Power Supplies, catalog numbers 22-507 and 22-508 with date codes from 08A04 through 01A08.

Date code format is MMAYY where MM is the month and YY is the year. The catalog number and date code are located on the back of the power supply. Power Supplies with a green dot on the product and the product's packaging have already been repaired and are not included in the recall.

Sold at: RadioShack stores nationwide from October 2004 through January 2008 for between $50 and $85.

Manufactured in: China

Remedy: Consumers should unplug the recalled power supply immediately and take it to any RadioShack store for a free repair. Registered owners of the recalled power supplies

will be mailed a notice.

Consumer Contact: For additional information, contact RadioShack at 800-843-7422 anytime,
or visit the firm's website at:

http://www.radioshack.com/recall

To see this recall on CPSC's web site, including pictures of the recalled products, please go to:

1479. Question to the canadiates running for Indiana Section Manager about the NTS

Yahoo group: IndyHamRadio
Date: 2008-07-03 19:25:36 UTC
From: Ivin Flint
Topic: 1479 Message: 1479

John and Ray

Thanks for indroducing yourselves on this group. I enjoyed reading a little about both of you and am excited that you're both running.

I am involed in the National Traffic System NTS and participate mainly in QIN which is the Indiana CW ARRL traffic net. I am an ORS and vol. as net control.

I know the Section Manager supports the traffic nets and I was wondering if either of you plan to check into QIN monthy to receive monthy ORS reports? I enjoy hearing our current section manager check in fairly reguarly and accepting traffic and I am hoping it will continue.

Ivin W9ILF

Irvin,

Guess I have not heard you because of being absent

from the former ICN & QIN for some time. I used to

do the net control on both and we even attempted a

newsletter for a short spell.

I am a net control for the Monday evening and Friday

morning ITN sessions.

Feel free to check in if possible on 3910 khz.

Guess I may possibly of most of this was VHF+

or maybe contesters hi...

From: Ray, K9DUR
Topic: 1479 Message: 1481

Ivin,

I definitely plan to check into ITN on a regular basis to send/receive traffic. As for QIN, although I fully support CW, I have never been a good CW operator. Therefore, my participation in QIN will be more limited.

Ivin,

I am glad you brought this up. The 80m QIN net tonight was sounding really great, I think we got a real break on the condx this evening. Although I had no traffic to pass, I did check in and let the guys know I was here. :-) That was probably the first time in 4 or 5 months for me. Can you post the net schedule here sometime? There might be some others that would be interested in joining in.

73 de KB9BVN

BTW...40m is open to the north right now. 7058 was hopping with FISTS members.

Hi Ivin,

Like I said in a private message to you, my hearing is not good enough anymore to get all the CW characters. I used to use CW quie abit when I could hear as I had to know CW to get my license back in the old days.

I do support the traffic nets even though I may not check in regularly.

Update: Koko Upgrades,
by CW2HRD on June 20, 2008
San Diego Zoo officials today revealed that Koko, the chimpanzee who several weeks ago became amateur radio's first alternate species codeless technician, has successfully upgraded and is now a codeless general.

Koko's joy, however, was dampened somewhat when he learned that his favorite vanity callsign, K0KO, was unavailable. Handlers advised Koko that his codeless general license did not qualify for a 1X2 callsign, and that the callsign K0KO is already held by an amateur in Minnesota. On learning this, Koko reportedly went into a short lived rampage in which he screeched and threw objects around his primate house QTH. He has since filed a vanity callsign application for N6APE

1. 2007 & 2008 June Es Comparison
    Posted by: "Art Jackson" ka5dwi@sbcglobal.net ka5dwi
    Date: Sat Jul 5, 2008 9:31 am ((PDT))

Hi all,

I keep threatening to retire from PropNET, but Ev and Dave keep feeding me carrots (horse and buggy analogy) to keep me going.

Most of the hassle with doing propagation analysis is pulling the data together. Dave KF6XA, with the encouragement of Ev, has come up with an excellent routine to extract and calculate LiveX capture data.

Now I can analyze data much more correctly and quickly than I have in the past. I have updated in the "PropNET Studies Blog" a link to a June 2007 and 2008 Es Comparison. Although 10-Meter capture volumes are down, the simularity and consistency in the trends of year to year are not that different overall.

The blog link or use "Research" on the PropNET Homepage.
http://propnet-studies.blogspot.com/

The link to the report (for you Dave):
http://www.swotrc.net/PropNET/June07&08EsPropagation.pdf

Enjoy.. I really appreciate any comments.

If I can get back good feedback and consistent participation on 10 Meters I may do similar work for someone elses data.

Hi John,
Welcome to the greatest hobby in the world;-)

Unfortunately, 2m SSB tends to be a bit slow except during contests.
But hang in there, the July CQ-VHF contest is coming in a couple of weeks.

http://www.cq-amateur-radio.com/VHF%20Contest%20Rules%20200843008.pdf

I hope to work you then! I'll be putting on a few nice hilltops down
here in southern Indiana.

Welcome, John. There used to be an informal 2m SSB net in Indy on Sunday evenings. It was headed up by KB9RDS. It might be a stretch from Logansport, but he may be able to tell you of other nets in your area.

73,
Ken

Hello

My name is John KC9MVQ. I just got my ticket early this year and am enjoying the field of ham radio. I live near Logansport, IN. I belong to the Cass County Amateur Radio Club. Had a fun time at field day. So far I am into 2 meter fm and now just getting into 2 meter ssb. I was wondering if anyone knows of a group or net here in Indaina that is into 2 meter ssb. Any info would be great and any QSO would be wonderful. Hope everyone had a great 4th of July.

I'll be a Hilltopper, most likely in EN50rl in Illinois. I'm looking at Saturday evening (6 pm to midnight) for my 6-hour stint from there. I hope 6m is open!

Hey John,

Welcome to Ham Radio, I hope you really enjoy it as much as I do. It's been a very fun and rewarding hobby for me for about 20 years. I don't have any 2m gear here other than my HT and 2m mobile. So I don't know of any 2m SSB nets or 2M CW nets....but I bet if you look hard enough you might find some. Heck, don't be afraid to start your own and mention it here. You never know what you might get started.

Looking forward to meeting you on the air sometime.

1502. 2m CW nets

Yahoo group: IndyHamRadio
Date: 2008-07-07 22:53:17 UTC
From: kc9brz
Topic: 1502 Message: 1502

Last time I asked the folks at ICE (w9ice.com), RCA (w9rca.org)
and IRA (w9ira.org) they said they didn't mind if people
used their repeaters for modulated CW, as long as all other
rules/conventions were adhered to. (Would need to watch for
the repeater-time-out factor, too.)

So if anyone has an oscillator (beeper thingee) and a 2m-anything,
there could be a 2m MCW net (when there is no other net scheduled)
on any of those club's repeaters.
ICE - 146.97
IRA - 147.12, and 146.625.
RCA - 146.88

IRA's 146.70 gets used during drive time, and sporadically at other
times, so one might use that too.

A 2m modulated CW net on a repeater might be a cool thing to
do, and also to promote CW.

1503. Don ask me to post platform

Yahoo group: IndyHamRadio
Date: 2008-07-08 00:04:54 UTC
From: John Poindexter
Topic: 1503 Message: 1503

If elected as Indiana Section Manager, I plan on working on the
following areas:

Emergency Communication Capabilities
Recruitment of young people
Amateur Radio Education
Expansion of PRB-1 to lift restrictive covenants
Support FCC rules enforcement

Emergency Communication Capabilities

EmComm has become the number one activity in amateur Radio today.
More and more community leaders are recognizing that Amateur Radio
Operators are not just amateurs, but experts in the field of
emergency communications.
This has to be our main issue in Indiana. Just this past spring, the
flooding showed that we are needed to assist local governments with
their communication needs.
I will work with Tony, W9AL, the SEC to assign ECs in every county
that want to work Emergency Communications, not just hold the title.
We need an EC in each and every county to develop the ARES program.
We also need a communication network to where each county can
communicate with every county, be it SSB, PSK, or even Packet Radio
as ARES is trying to get going.

Recruitment of young people

The average age of ham operators is nearing 60 years old. We need
to find ways to introduce and recruit young people into Amateur
Radio. Digital communication should be the key element to draw in
the younger Indiana youths. I will work toward active recruitment of
our youth. As a school teacher, I push Amateur Radio to my students
all the time and I know that this is a hard task trying to convince
them to give up their cell phone texting and use Amateur Radio. We
can't stop trying, so I will be asking all Hams to talk to the youth
and show them your station. Maybe this way we can start dropping
that average age here in Indiana.

Amateur Radio Education

This does not stop when the individual passes the Technician test.
They need an Elmer to show them all there is in Ham Radio. Help them
to build antennas, program their radios, and even interface a
computer. Just getting them through the exam is not enough; too many
become discouraged because they don't understand how to accomplish
some facet of our hobby. As recently stated in an ARRL letter, there
are a lot hams that can not program their radios to quickly change

frequencies or set a tone access. In an emergency they need to have this knowledge.

Expansion of PRB-1 to lift restrictive covenants

More communities are putting a stop to towers and antennas. If this continues there will be large areas where only HTs will be allowed to transmit. This makes all areas of Amateur Radio suffer. I plan on supporting David Spoelstra, N9KT, the SGL, and his idea of expanding the Marion County law on tower height to the whole state. We all need to help with lobbing for the expansion of PRB-1 here in Indiana to lift all covenants.

Support FCC rules enforcement

If you read my Bio, then you noticed that I am a former Special Agent. I strongly believe in our self-enforcement program as well as the support the FCC in rules enforcement. I believe it is our duty to inform the FCC when blatant violations are occurring in order that we can have Ham Bands that are not being abused.

John, thanks for posting your platform. I have some comments and questions.

>EmComm has become the number one activity in amateur Radio today.
>More and more community leaders are recognizing that Amateur Radio
>Operators are not just amateurs, but experts in the field of
>emergency communications.

True enough, but I see amateur radio emcomm going many different directions and, consequently, pulling our amateur radio population in different directions. It's hard enough for an amateur radio operator to figure out who is in charge of emcomm, so how do we expect "community leaders" to figure it out? We have ARES, RACES, SKYWARN, SATERN, and who knows what else. All have different leadership and different hoops to jump through. We need some unification.

>I will work with Tony, W9AL, the SEC to assign ECs in every county
>that want to work Emergency Communications, not just hold the title.

Good move as I think we have some county ECs who simply hold the title and do nothing else. Even filing a monthly report with the SEC seems to be too much for them. Of course, if they aren't doing anything at the local level, a monthly report that says "I did nothing" is a waste of time.

>We also need a communication network to where each county can
>communicate with every county, be it SSB, PSK, or even Packet Radio
>as ARES is trying to get going.

Plays into my earlier comment. The state DHS ham team is trying to develop a similar network. Why the parallel effort?

One thing you didn't mention was emcomm preparedness and training. I'm talking about NIMS courses, weather spotter courses, basic first aid, ARRL emcomm courses, etc. Yes, it's a fine line. If we require our people to be trained, we'll drive some of them away. But without the documented training, many agencies won't accept us.

>Expansion of PRB-1 to lift restrictive covenants

Frankly, I think this is tilting at windmills. Restrictive covenants are private contracts that home owners accept when they move into a neighborhood. From the perspective of a home owner association, I really don't want the Federal government meddling in the HOA's

affairs. And amateur radio simply does not have the clout that the broadcast television and direct broadcast satellite people have. That's why those industries were able to get Federal preemption of CCRs with regard to television antennas and satellite dishes. I'm not sure it's worth amateur radio's time and effort to pursue this.

>More communities are putting a stop to towers and antennas. If this
>continues there will be large areas where only HTs will be allowed to transmit.

Fear mongering, John. I have no towers or outside antennas. Yet, I communicate quite effectively on VHF and UHF. I've even done a little HF work. All with attic antennas.

The couple who wants to raise a family will look for a house in a community that has good schools. Likewise, the amateur radio operator who wants to contest or work DX on HF will look for a house in a community that doesn't restrict antennas. It's a choice that has to be made while house shopping.

>I plan on supporting David Spoelstra, N9KT, the SGL, and his idea of
>expanding the Marion County law on tower height to the whole state.
>We all need to help with lobbing for the expansion of PRB-1 here in
>Indiana to lift all covenants.

I'm confused. Are you talking about local zoning ordinances or CCRs? They are two different things.

>We have ARES, RACES, SKYWARN,
> SATERN, and who knows what else. All have different leadership and
> different hoops to jump through. We need some unification.

I agree and hopefully we can have that unification through the INDHS ham team. We just have to get all those different entities to work together with INDHS. That will be the work that I hope to accomplish.

> >We also need a communication network to where each county can
> >communicate with every county, be it SSB, PSK, or even Packet
>Radio as ARES is trying to get going.
>
> Plays into my earlier comment. The state DHS ham team is trying to
> develop a similar network. Why the parallel effort?

Yes, I believe that ARES took their lead to develop a packet network from the DHS team's lead. I will work toward supporting what the DHS team comes up with and press to get all ARRL affiliated groups, and other groups as well, to work with the plan that is develop by DHS. Thye should be the leader of our communications plans and actions.

>
> One thing you didn't mention was emcomm preparedness and training.

first > aid, ARRL emcomm courses, etc. Yes, it's a fine line. If we
require our people to be trained, we'll drive some of them away. But
without the documented training, many agencies won't accept us.
>

This will be the deal breaker. We have lost some here in this county from my RACES team because they do not want to do the courses.
Most are willing to sit through a two hour weather class, and I admit some of these do it to win the door prize which is usually a weather radio, but others do it because they want to learn about storms.

When it comes to a point where it hits the fan and all that is left is ham radio, then those that will work in the EOC most likely will be the ones that are trained. But, out in the field, we will have individuals who are not trained but still can tell us what is going

on and what needs to be done by relaying messages to the EOC.

Hams are a funny people. They don't always go for the ARRL emcomm or the NIMS courses, but when a disaster happens you can count on them showing up and willing to work.

> I'm confused. Are you talking about local zoning ordinances or CCRs?
> They are two different things.
>

First, let me say that I happy to see that you can work some HF. Not all people who live with ccrs can do that.

I guess I am spoiled because here we don't even need a building permit to install a tower.

I believe what I was referring to was the local ordinances restricting tower height. According to what I was told, Marion County's is 70 feet in height without a special permit.

I would like to see us get something through the state house that allows us all here in Indiana to have at least a 70 foot tower, if we want, without having to jump through the hoops of local government.

I think I have covered everything you asked, if not please ask again and I will try again. Thanks very much for the questions. Your points are very valid and will be filed in my folder so that I may refer back to them when I plan my actions.

Which begs the question...are we working for IN-DHS or are we working for our local served agencies? I think there might be some push-back from local ARES and RACES groups if it appears that IN-DHS is running the show from Indianapolis without regard for local resources or needs.

>Hams are a funny people. They don't always go for the ARRL emcomm or
>the NIMS courses, but when a disaster happens you can count on them
>showing up and willing to work.

I don't disagree. However, the question of having a half dozen trained people vs. two dozen untrained people will, I think, cause us some grief. It will be up to the local coordinators to keep track of the training levels that the individuals on their teams have achieved. However, we can't just rely on the handful of people who bother to get the training. We have to stress the importance of the training to all of our people even if we don't actually require the training. And we will have to be honest with our served agencies when they ask us about our training programs. "We don't have a training program," will probably not be an acceptable answer.

>I believe what I was referring to was the local ordinances
>restricting tower height.

OK. That's much different from CCRs. Elected governmental officials are determining the zoning ordinances and we should all take a careful look at how those ordinances are developed.

I don't think INDHS will have any disregard for local resources or
needs. From the experience I have had with them they seem to be
quite aware of what is going on across the state and don't come
across as Big Brother and you'll do as I say.

In a major disaster local resources could be gone. When I was
stationed in Florida, it was known that a hurricane could wipe out
those resources and outside agencies have to step up to support the
area affect. We could have a disaster here (not the hurricane) and
someone will have to step in and help support an area that has been
wipe out due to some disaster.

1516. Re: [IndyHamRadio] IN-ARRL Bulletin 12-2008 (INDIANA SECTION MANAGER POSITION)

Yahoo group: IndyHamRadio
Date: 2008-07-10 16:17:52 UTC
From: Don Evilsizor
Topic: 1477 Message: 1516

ALL,

First Brian, thanks for your post via the IN-ARRL Bulletin
on the candidates who so far have thrown their hats in the
ring for the Indiana Section Manager position.

And a big thank you to both John Poindexter W3ML and
Ray Andrews K9DUR in regards to stepping forward as
candidates. I want you to know for my part that step is
appreciated by me.

Good Luck,

Don Evilsizor /KA9QWC

==========

IN-ARRL BULLETIN 12-2008

01:55PM EDT 2 JULY 2008 de KB9BVN

Many thanks to John Poindexter W3ML, and Ray Andrews K9DUR, for running for

the job of Indiana Section Manager. According to what I have read on the

ARRL website, since we have more than one person running for the job, we

will have an election this fall. Nominations for this position are closed

after September 5th, 2008.

As election time gets closer I will try to get the information out as soon

as I get it.

You must be an ARRL member to vote in this election. You can join the ARRL

or renew your membership by going to the ARRL website at http://www.arrl. org

and signing up there.

1517. Heads Up - Who needs Alaska?

Yahoo group: IndyHamRadio
Date: 2008-07-10 18:24:14 UTC
From: KB9BVN
Topic: 1517 Message: 1517

This is not a bulletin...just a heads up:

W1AW/KL7 to Operate from Arctic Circle -- Just 300 miles south of the Alaskan Arctic Ocean -- where the Arctic Circle crosses the Dalton Highway (66 degrees, 33 minutes north) -- W1AW/KL7 will be on the air (grid square BP56) July 26-August 10 on all bands from 160-6 meters.

This ARRL 2008 Alaska State Convention Special Event Station plans to run two HF stations operating CW, SSB and digital, one satellite station and one station devoted to 146.52 MHz. The Alaskan summer skies are ablaze with gray line-enhanced propagation effects, providing six to eight hour spurts of activity to most of the ham radio world. W1AW/KL7 plans to be active from 0600 UTC-1400 UTC to maximize gray line propagation.

From Alaska, signals will take off in both directions at the same time: Europe to the East on one side, with Asia to the West on the other side. For an illustration of how Arctic gray line propagation works, see page 21 in the August 2008 issue of QST. The 2008 Alaska ARRL Convention will run from August 1-4, 2008 in Anchorage.

1518. Beware of DTV Box Scam

Yahoo group: IndyHamRadio
Date: 2008-07-10 22:50:13 UTC
From: Don
Topic: 1518 Message: 1518

I know some of us have discussed The Switchover to Digital TV Soon and the Boxes and Coupons , Some also already got some Boxes and did some testing.

Well on the Back Page of the Hammond Times My local Newspaper is a FULL Page ad that Cost Thousands a Company called Universal Techtronics they took out Nationwide about their offering the Quote below

New Miracle TV Box allows you to receive FREE Broadcast channels: No Cable or Sat Bills

Wow FREE just pays Shipping and 5 Yrs Insurance at $ 50.00 Dollars

Well I looked into this Crap and misleading to the uninformed public, The Add Unfortunately they will make a lot of Money for Something We already can get coupons for at a reduced rate.

So please don't anyone Fall for this and Spread the word to Family and Friends about the Scam

This is the Same Co that ran the Full Page add about the Miracle Stove

More info at

http://tinyurl.com/6s8wv9

http://tinyurl.com/59jtlv

What they are offering for Free We already get with Digital TV And Will with the New DTV Box

Just in case Someone actually dos not know about this Here is the Info http://www.dtv.gov/

Now as a Radio Communications Hobbyist Some of us Would like to use a Box that will Pass Analogue Signals Such at ATV And Low Power TV Stations such as University Etc. they will not be required to switch yet , also one With 12 Volt Input would be nice

1521. K9DUR, ARRL Section Manager Nominee

Yahoo group: IndyHamRadio
Date: 2008-07-13 13:52:45 UTC
From: Ray Andrews
Topic: 1521 Message: 1521

Greetings,

I am Ray Andrews, K9DUR, and am a nominee for the position of ARRL Section Manager for Indiana.

As a starting point, please visit my web site to learn a little more about me. On the main page is a link to a campaign flyer that I have put together which not only gives some biographical information but also lists what my goals and objectives would be as Section Manager, if elected.

The URL is: http://www.qsl.net/k9dur

I am not the type of person who goes into a position like this with my own agenda. I believe that it is the responsibility of the Section Manager to serve the amateur radio operators in his section, whether ARRL members or not. His agenda should be that of the amateurs he serves; and therefore he should listen to the amateur community as a whole and work to improve those areas where they are not being served adequately.

If you go to the ARRL By-Laws and read the section about the position of Section Manager, you will find that the SM does not make ARRL policy, that is the job of the Division Directors. The primary responsibility of the SM is to manage the ARRL Field Organization in his section. Consequently, first and foremost the SM must ensure that the section staff and their appointees are efficiently serving the needs of the amateur community in their respective areas of responsibility. This does not mean however, that the SM has no role in the ARRL policy-making process. It the duty of the SM to maintain a close working relationship with the Division Director and to make certain that the Division Director is aware of the concerns of the amateurs in his section so that the Division Director can make informed decisions.

One of the areas needing to be addressed that is not adequately covered by the ARRL Field Organization is in the area of recruitment of new amateurs. The ARRL Field Organization guidelines state that recruitment is the responsibility of all ARRL appointees. I would take that one step further: recruitment is the responsibility of all amateurs. However, the ARRL Field Organization does not include a specific position tasked with providing leadership to and coordinating recruitment efforts throughout the section. It would be my intention to appoint an Assistant Section Manager with the specific responsibility of performing that task. Without a single person to coordinate the recruiting efforts throughout the section,

those efforts, while not necessarily doomed to failure, would definitely not be as successful as they could be.

One thing I have learned in 40 years of working in industry, first as an electronic design engineer and later as a software engineer, is that you must determine who your customers are and work to meet the needs of those customers. The customers of the Section Manager are the amateur radio operators throughout the section. I will work to meet the needs of ALL amateur radio operators in Indiana, both directly and through the ARRL appointees across the state. I dislike leaders who have "tunnel-vision" and concentrate on their pet projects to the detriment of other areas which also need attention. I promise, I will not do this.

Can one person personally perform all of the tasks required to support and enhance amateur radio across Indiana? Of course not! That is why maintaining an efficiently functioning Field Organization is and must be the primary task of the Section Manager.

Looking forward to hearing your comments.

73, Ray, K9DUR

1524. K9ZF/R CQWW-VHF Plans

Yahoo group: IndyHamRadio
Date: 2008-07-16 10:18:23 UTC
From: Dan Evans
Topic: 1524 Message: 1524

Group,

I've got the gear all together and ready to roll once again. I will be doing a "mini-Rover" trip for the CQWW-VHF contest this weekend.

http://www.cqww-vhf.com/

Begins: 1800 UTC Saturday, July 19, 2008

Ends: 2100 UTC Sunday, July 20, 2008

I plan to spend Saturday afternoon and evening in EM68wo, in Salem, Indiana. The city park here is around 900' elevation. Very good for Indiana:-)

Sunday I'll get an early start in EM78cn, from a hilltop near Henryville, Indiana. This hilltop is over 1000' and one of the best sites I've found. I'll stay here as long as activity holds out, or the end of the contest.

I know 2 grids isn't much of a Rover trip, but at $4.16/gallon it will have to do for now. I'm tentatively planning to do EM67/EM77/EM68/EM78 in September.

6m will be 100 watts to 3 elements at 25'.
2m will be 160 watts to 10 elements at 18'.

432 is 100 watts to 18 elements at 21'. Not good for contest points, but I will have it along if anyone would like a 432 QSO anyway.

Have fun!

Hi Dan,

I'll be looking for you! I plan on being a QRP-Hilltopper on Saturday evening. Probably start somewhere between 4 and 6 pm and go till my 6 hours are up. I'll most likely be on a hill in EN50rl west of Gibson City, IL.

Have fun!

-------- Original Message --------
Subject: [SMC] Wed. nite 144.240 & 144.250 USB nets on tonight
Date: Wed, 23 Jul 2008 14:19:56 -0500
From: Todd Sprinkmann <sprinkies@...>
To: badgercontesters@..., nlrs@..., CVVHF
<cvvhf@...>, smc@...

Hello,

Beautiful weather tonight so the nets are definitely a go
tonight.

I will start at 8pm central on 144.240 and spend a half hour
looking only west thru north (my location being 40 miles north
of Milwaukee). This is to stir up activity in W and N WIS,
along with adjacent portions of IA/MN and UP of MICH.
Areas that are often overlooked but I enjoy being able to
work into.

At 8:30, I will start looking south on 144.250, and run the
customary Badger Contesters net. The bulk of our check-ins
tend to be from the Milwaukee and Illinois region, but I do
also swing the beams in all directions from about 8:35 until
about 8:45, give or take.

The purpose of these nets or activity periods is to stir up
activity on 144.

After I have gone around the compass and checked
everyone in, I will come back to each participant at least
once (in check-in order, hopefully) for any comments or
traffic they may have for the net. If you'd like to be "in and
out", that's fine; let me know and I'll make a note of it.

Also, once stations have made contact with the net, they are
perfectly free to QSY and try to establish contact with others.
In fact, I encourage it.

Far better to have multiple QSO's on multiple frequencies,
than have everybody tethered to the net frequencies. This is
especially true if the band is open like it was last week, and
stations want to try and work some DX.

We had 10 stations on 144.240 last week and 23 of them
on 144.250. It was both exciting and busy. If you'd rather
stay with the net the whole time, it's fine by me. But again,
don't feel as though you have to stick around the whole time.
This is a very informal net and the only purpose is to get 144
busy.

73,
Todd KC9BQA EN63ao 40 miles north of Milwaukee

1530. Reminder of Northern Indiana VHF Packet Net Tonight

Yahoo group: IndyHamRadio
Date: 2008-07-23 23:08:04 UTC
From: Mark Thompson
Topic: 1530 Message: 1530

Reminder of Northern Indiana VHF Packet Net Tonight
    Posted by: "Dan" n9wnh@... n9wnh
    Date: Wed Jul 23, 2008 8:46 am ((PDT))

Don't forget the Net tonight on 145.010 at 8 PM. Unconnected converse mode.

Have your tnc or software MONITOR settings so you can see all the stations that you can receive.

Then set your UNPROTO settings to digi through your nearest and highest station. Then other stations will be able to see your signal if they can receive the digi's signal.

You could use the following as an example: UNPROTO VIA KC9ANF,N9BAV. This shows you digi'ing your signal in unconnected mode only through KC9ANF in Columbia City and N9BAV in Goshen, if either can receive you that is. You can leave this command on as it will only work when in unconnected mode. It will also digi your ID and Beacon if you have then on, which is a good idea anyway so people can see your station even when it isn't manned. You can still connect to another station at anytime using your connect command procedures as you would normally.

You can add others if you need to in addition to these by simply adding a comma for most software and tnc's after each digi callsign. But if not needed then don't. As it only adds more transmissions to the network.

Whitley Co. EOC/RACES Station KC9ANF is being used here locally in Columbia City presently 50W at 140', normally 50W at 85'. N9BAV is at Goshen ARC at Goshen College around 85'. KC9ANF does not have set in it's unproto command to digi to N9BAV nor is N9BAV set to digi through KC9ANF. Be nice if each of these would make this change in their settings? How about it folks?

There is no need to connect to any station when doing unconnected converse mode then as it will digi your signal if you have a digi station set in your unproto command.

Muncie Area Amateur Radio Club special event Saturday
    Posted by: "Gary Lee" kb9zuv@... electricguineapig
    Date: Fri Jul 25, 2008 7:36 pm ((PDT))

Myself and kb9lei will be operating my k2 in an emergency type demonstration from the delaware co. fairgrounds in Muncie Indiana.
The station will consist of a k2, 17 ah jump starter, and 5/8 wave helically wound vertical on a black widow poll.
Listen for wb9hxg on or around 14.340 from 10:00 am to 4:00 pm edt, or 14:00 to 20:00 utc.
This is a demonstration of emergency amateur radio for the Delaware Co. preparedness fair.

Hope to make some contacts tomorrow.
This will be my first try at a special event kind of thing.

Rules – 2008 ARRL August UHF Contest
1. Object: To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
2. Date and Contest Period: First full weekend of August. Begins 1800 UTC Saturday, ends 1800 UTC Sunday (August 2-3, 2008). Entrants may use as much of this time as they wish.
3. Entry Categories:
1. 3.1 Single Operator – Low Power
2. 3.2 Single Operator – High Power
3. 3.3. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1.A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Same as the “Rover” class above, but competes with no more than any four bands of their own choosing. Output power limits shall be the same as those defined for the Single Operator Low Power category (3.1.1)
5. 3.5. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
6. 3.4. Multioperator.
4. Exchange: Grid-square locator (see April 1994 QST, page 86 or www.arrl.org/locate/gridinto.html).
1. 4.1 Exchange of signal report is optional.

5. Scoring:
1. 5.1 QSO points:
1. 5.1.1 Count three points for each complete 222- or 432-MHz QSO.
2. 5.1.2 Count six points for each complete 902- or 1296-MHz QSO.
3. 5.1.3 Count 12 points for each 2.3-GHz (or higher) QSO.
2. 5.2 Multiplier: The total number of different grid squares worked per band. Each 2 degree by 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3 Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. Example: W1AW works W3CCX in FN20 on 222, 432 and 1296 MHz. This gives W1AW 12 QSO points (3 + 3 + 6) and also three grid-square multipliers. Final score is 12 QSO points X 3 multipliers, or 36.
4. 5.4 Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1 Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Miscellaneous:
1. 6.1 Partial QSOs do not count. Both callsigns, full exchanges and acknowledgment must be sent and received.
2. 6.2 A transmitter, receiver or antenna used to contact one or more stations under one call sign may not be used subsequently during the contest period under any other call sign (with the exception of family stations). The intent of this rule is to accommodate family members who must share a rig, not to manufacture artificial contacts.
3. 6.3 All equipment and antennas used by entrants must be owned and operated by amateurs. Use of non-amateur owned gear is not prohibited, but use of such equipment places the entrant in a separate category, ineligible for awards.
4. 6.4 Contacts made by re-transmitting either or both stations, whether by satellite or terrestrial means, are prohibited. Frequencies regularly occupied by a repeater in a locality may not be used for contest work, even if the repeater is turned off.
7. Awards: Certificates will be awarded in the following categories:
1. 7.1 Top single-operator High and Low power score in each ARRL Division.
2. 7.2 Top single operator High and Low power score on each band (222, 432, 902, 1296 and 2304-and-up categories) in each ARRL Division where significant effort or competition is evidenced. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band achievement stickers.) For example, if W1AW has the highest single-operator multi-band score in the Atlantic Division and his 432-MHz score is higher than any other Atlantic Division single-operator’s, he will earn both a certificate for being the single-operator Division leader and an endorsement sticker for 432 MHz.
3. 7.3 Top multi-operator score in each ARRL Division where significant effort or competition is evidenced. (Multioperator entries are not eligible for single-band awards.) Additional certificates may be awarded where significant effort or competition is evidenced.
8. Submission: Deadline for submission of entries for this contest is 1800z Tuesday, September 6, 2008.
1. 8.1 Paper logs and properly completed summary sheets should be mailed to: August UHF Contest, ARRL. 225 Main Street, Newington, CT 06111.
2. 8.2 Cabrillo formatter logs should be emailed to AugustUHF@arrl.org
3. 8.3 Participants may submit using the Web Applet at www.b4h.net/cabforms .

4. 8.4 Entries postmarked or email dated after the deadline may only be considered checklogs.
9. Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST. These are also available at the Contest Branch Website at: http://www.arrl.org/contests .Questions regarding this contest should be emailed to contests@... . Only use the contest-name email for submission of entries. All contest forms and rules may be downloaded at: http://www.arrl.org/contests/forms/

Greg -- Hopefully someone will send you better (more accurate) directions, but here goes (went 2 years ago):
I-65 South to I-465 East (across north part of city) to the Meridian Street exit, and head south to 86th Street; turn LEFT on 86th and go to Westfield Blvd (in the Nora area) and head south. I think the site is about 71st Street (but not sure), will be able to see everything set up.
Hope this helps, Greg

IN-ARRL BULLETIN 13-2008
10:43AM EDT 4 AUGUST 2008 de KB9BVN

Just a reminder that the nominations for the position of Indiana ARRL Section Manager will be open until September 5th, 2008. If you are interested in making a nomination and/or running for this position, please visit the ARRL website and submit your nomination. The new SM will be installeed in January 2009 and will serve for 18 months. The next SM election will then be held in June of 2010.

Remember, you must be a current ARRL member to run for any ARRL position, and you must be an ARRL member to be eligible to vote in this, and all ARRL elections.

More information on the SM nomination/election process and procedures are found at this link:

http://www.arrl.org/FandES/field/org/smterms.html

So far to the best of my knowledge we only have two candidates running:

John Poindexter W3ML - Knox Indiana
http://www.w3ml.com/

Ray Andrews K9DUR - West Terre Haute Indiana
http://www.qsl.net/k9dur/

Brian Murrey - KB9BVN
IN-ARRL Bulletin Manager

From: kc9mhb
Topic: 1542 Message: 1542

To Whom It May Concern;
I am looking for a random wire tuner that someone would be willing to loan to me to use. The Hendrick County ARES group was kind enough to loan me a Kenwood 120. I live in an apartment complex and am VERY limited as to what I can use so a friend of mine "tapped" the rain gutters of the building I am in and that will give me approximately 100-150 feet of gutters that I can use. I just need to find a tuner that will work with my wire and be able to tune it. I am attempting to get disablilty so monies are tight and I cant pay for one. If someone can help please call me at 381-0788
Thanks and God Bless

Rapidly approaching!

Unfortunately, it is the weekend before the ARRL September VHF QSO Party this year. In the past it has been the same weekend, and I would bring my Rover setup to start the contest in the tail-gate area. Oh well, I guess I could bring the Rover setup anyway just for the fun of it:-)

Check out the web page for more details:

1545. N9LV Repeater Damage and Tower for sale

Yahoo group: IndyHamRadio
Date: 2008-08-06 21:12:23 UTC
From: Dan
Topic: 1545 Message: 1545

I got word that N9LV Mathew lost part of the N. Judson 145.410 Repeater from the last round of storms. At this time I do not know how much. Just to pass along also that N9LV has a 100' tower for sale and surely needs to sell this to help out in his repairs now. He has an ad on http://www.qth.com under towers. So check it out and get with him if anyone is interested. As far as that goes he may need further help to get the Starke County VHF Repeater back on the air so please keep that in mind.

1554. Digital Communication Conference, 9/26-28, Chicago - Register by 9/1 & Save

Yahoo group: IndyHamRadio
Date: 2008-08-19 03:41:50 UTC
From: Mark Thompson
Topic: 1554 Message: 1554
Attachments: 1 described; binary payloads are missing from this source WARC

The ARRL/TAPR DCC (Digital Communications Conference) is being held in Chicago on September 26 - 28, 2008.

The DCC will be at the Elk Grove Village Holiday Inn located in Chicago's northwest suburbs near O'Hare airport with a free airport to hotel shuttle and easily accessible from major interstate highways.

The DCC is the premiere, national, annual digital ham radio conference covering ALL the Digital Voice & Data technologies from HF to Microwaves.

There will be BOTH Technical & Introductory presentations covering all levels of experience with the digital modes and also an ARRL forum.

This year for the first time at the DCC there will be a D-STAR Friday Night event. We plan to have innovators, pioneers & leaders in D-STAR digital voice & data technology available to present and take your questions.

Icom will be at the DCC and TAPR plans to have it's 70cm & 23cm D-STAR digital voice & data repeaters operating at the DCC connected to the internet gateway.

You can get more information about the DCC at: http://www.tapr.org/dcc.html
A DCC advertisement is attached that can be published in your local club newsletters.

Reigster before September 1st & save $10 on your registration fee.

You can register at:
https://www.tapr.org/dccregistration.php
Look forward to seeing everyone at the DCC.

1555. Learn CW online!

Yahoo group: IndyHamRadio
Date: 2008-08-19 13:43:39 UTC
From: Brian Murrey
Topic: 1555 Message: 1555

A new website to learn and practice Morse telegraphy has been launched:
http://lcwo.net/ - Learn CW Online

There are already hundreds of training programs, MP3/CD courses and practice aids available, but LCWO follows a radically different concept: While sticking to well-proven methods for learning and practice, all you need for using LCWO is a web browser!

This gives the user the liberty to practice CW wherever an internet connection is available, always retaining the personal settings, scores and statistics.

Currently the site, which is available in four languages (English, French, German and Portuguese) offers a complete Koch method Morse course, code group practice, callsign- and plain text training modes and also allows to convert random text to Morse MP3s.

A high score list is available to compare results with other users, personal statistics help to track training progress.

LCWO.net is a non-commercial project. Creating a free account only takes a few seconds, and you can start practicing CW right away!

http://www.arrl.org/news/stories/2008/08/26/10284/?nc=1

New HF Digital Protocol to Debut at DCC
WINMOR, an HF digital protocol designed for use with the Winlink 2000 network, will be unveiled at the upcoming ARRL/TAPR Digital Communications Conference in Chicago, September 26-28. http://www.tapr.org/dcc.html
According to developer Rick Muething, KN6KB, WINMOR will effectively eliminate the need for external PACTOR hardware. "This new protocol is implemented through a Windows application that uses a computer sound card for all the analog-to-digital conversion. It provides error-free ARQ transfers within 200, 500 or 2000 Hz bandwidths," Muething said.
In terms of throughput, Muething said that the 200-Hz WINMOR mode appears to equal the performance of PACTOR I. In WINMOR's 2000 Hz mode, its performance rivals PACTOR III.
"WINMOR is a work in progress," Muething said. "We won't be pulling the wraps off a finished application at the conference. We're close, though. I'd like to see on-air testing in 3 to 6 months."
Conference information and registration is available onlinehttp://www.tapr.org/dcc.html or by telephone at 972-671-8277. Rick Muething's presentation paper, WINMOR. . . A Sound Card ARQ Mode for Winlink HF Digital Messaging, is included in the conference proceedings. Proceedings will also be available for sale on the ARRL Web after the conference.

Wednesday September 3, 2008
8:00 pm - 8:30 pm

Location: Areas Surrounding Allen,Elkhart and Whitley Counties

Notes:
This is an informal net that is held every Wednesday at 8PM on 145.010 @ 1200 baud. We use unconnected converse mode to communicate for a roundtable net setting. Set your unproto command or equivalent to digi through the nearest and strongest station to you. Have your monitor settings on so you can see everyone. There are various personal stations in Allen Countyat this time that you might be able to digi through. Also at this time the Whitley Co. EMA/RACES Station KC9ANF is 50W @ 140'. N9BAV has a standalone digi at Goshen at the GARC station I believe nearly at 85'

1560. American Red Cross Clarifies Amateur Radio Policy

Yahoo group: IndyHamRadio
Date: 2008-09-04 19:20:52 UTC
From: Mark Thompson
Topic: 1560 Message: 1560

http://www.arrl.org/news/stories/2008/09/04/10314/?nc=1
American Red Cross Clarifies Amateur Radio Policy
On September 3, the American Red Cross released a statement to clarify their policy as it concerns Amateur Radio operators. The letter below from American Red Cross Disaster Service Technology Manager Keith Robertory, KG4UIR, is presented in its entirety:

There has recently been some posting on amateur radio discussion groups on the Internet that is carrying false or misleading information. The Red Cross does not have a policy against amateur radio participating in passing health and welfare messages. In fact, we recognize the importance of amateur radio in being a vital method for people to get registered.

The American Red Cross welcomes the support of Amateur Radio Operators in connecting friends and family members together through our health and welfare programs. The grassroots, independent nature of Amateur Radio Operators in communities around the country make them well suited for this task.

General welfare messages are processed through the Red Cross Safe and Well web site. This site allows people to register their status which can be checked by friends and family who search by your name, address or phone number. A quick look at the website disastersafe.redcross.org will show how both the registration process and search are done.

As few as two hams can setup an effective registration process. A ham located in the disaster zone can use any mode to transmit the basic Safe and Well registration information to another ham located outside the disaster who would enter the information on the web site. This quick ad-hoc setup doesn't rely on any affiliations and can be established by a call out to another ham who can help.

The Red Cross also processes welfare inquiry messages that contain specific medical information. These contain more sensitive and personally identifiable information at the same time that the Red Cross keeps confidential to respect client privacy. We are researching if and how these messages can be passed across open frequencies, and what federal restrictions (such as HIPPA) may be impact how this is done.

Thank you,
Keith Robertory
Disaster Service Technology Manager, American Red Cross
KG4UIR

From: lightsearch52
Topic: 1560 Message: 1561

For myself, the ARC ruined the possibility of my participating in their H$W program. Poorly handled, poorly presented, and now a mess. I shall not want to be part of it. As to HIPPA.....another piece of crap from Washington that just made life harder for all of the medical community.
All of the above is my opinion and whether or not you agree......well, whatever.

I am done now

1562. September VHF QSO Party, September 13 - 14

Yahoo group: IndyHamRadio
Date: 2008-09-05 02:47:24 UTC
From: Mark Thompson
Topic: 1562 Message: 1562
Attachments: 1 described; binary payloads are missing from this source WARC

http://www.arrl.org/contests/rules/2008/sepvhf.html

2008 September VHF QSO Party Rules
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of September. Begins 1800 UTC Saturday and ends 0300 UTC Monday (September 13 - 15, 2008).
3. Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power
2. 3.2. Single Operator Portable.
3. 3.3. Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Same as the “Rover” class above, but competes with no more than any four bands of their own choosing. Output power limits shall be the same as those defined for the Single Operator Low Power category.
5. 3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
1. 3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.

Please see “General Rules For All ARRL Contests Above 30 MHz” for more information on the Rover categories.
6. 3.6. Multioperator:
1. 3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
2. 3.6.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count three points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
4. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
2. 5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and scoreif they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...
6. Miscellaneous:
1. 6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
3. 6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. Awards:
1. 7.1. Certificates will be awarded in the following categories.
1. 7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
2. 7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
3. 7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band

awards.)
4. 7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
5. 7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.) Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
6. 7.1.6. Top scoring club in each club competition category will be awarded a gavel. See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
1. 8.1. All submissions must be emailed to SeptemberVHF@... or postmarked no later than 0300z Tuesday, October 14, 2008. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
2. 8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
3. 8.3. Electronically submitted entries are considered signed.
4. 8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
5. 8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests
1. 9.1.1 For queries contact contests@... or (860) 594-0295.
2. 9.2. Forms may be obtained by:
1. 9.2.1. Downloading from the Internet at the Contest Branch Website: http://www.arrl.org/contests/forms.
2. 9.2.2. Sending an SASE to September VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

1568. WANTED: Manuals

Yahoo group: IndyHamRadio
Date: 2008-09-07 17:13:16 UTC
From: KB9BVN
Topic: 1568 Message: 1568

I am just about finished collecting all the parts for my vintage HW-9 station. I have the HW-9 with WARC, the HM-9 QRP Wattmeter, the HFT-9A QRP Antenna Tuner, and the PSA-9 Power Supply all sitting on the desk. I am missing some of the manuals. Specifically I am looking for the construction manuals (originals preferred, copies considered) for the HM-9 and the HFT-9A. If you have any of these you'd consider selling or trading, please let me know.

I also have a spare HM-9 for sale if you are interested.

Thanks and 73

Topic: 1572 Message: 1572

ARRL Presents New Membership Benefit

With just a mouse click or two, ARRL members can now access the online QST magazine archive. This new benefit -- a service of the ARRL Technical Information Service (TIS) -- provides PDF copies of all QST articles from December 1915 through December 2004, enabling members to view and print their favorite article, project and more. For many years, the TIS has provided members with assistance researching ARRL periodicals and publications, as well as providing members and non-members with article reprints for a small fee. Access to the new online digital QST archive is free for ARRL members

"Having access to every issue of QST through 2004 is absolutely incredible!" said ARRL Lab Manager Ed Hare, W1RFI. "The best of the best of QST from every era is now at the fingertips of every ARRL member with a keyboard and an Internet connection. Members can research articles on any subject that interests them, or just browse the past issues. This will be a popular membership benefit that will be of special value to new and long-time hams alike. This valuable content will help radio amateurs who use QST as a technical resource -- for projects, equipment 'hints and kinks' -- and for other research contributing to the advancement of the radio art. We know many hams will simply enjoy perusing these pages of history, too."

The ARRL Periodicals Archive and Search lists every article for QST from 1915 to the present, QEX from 1981 to the present, Ham Radio from 1968 to 1990 and NCJ from 1973 to the present (please note that beginning in 1998, each issue of QEX covers two months). Only ARRL members will be able to download and print copies of the QST articles.

QST magazine is the official journal of ARRL, the national association for Amateur Radio. An interest in Amateur Radio is the only essential qualification of membership. ARRL membership is $39 per year in the US. For a complete list of membership benefits and dues, please visit the ARRL Membership Web page at https://www.arrl.org/forms/membership/

IN-ARRL BULLETIN 14-2008
10:29 PM - SEPTEMBER 11, 2008

FROM NEWT KJ9J - QIN NET MANAGER

I WISH TO ANNOUNCE THAT DICK, K9PUI, IS RESIGNING AS CO-MGR OF QIN AS OF OCT 1 AFTER SEVERAL YEARS OF VERY ACTIVE SERVICE AND HELP TO QIN. DICK WILL STILL QNI WHENEVER HE HAS TIME AND WILL STILL BE ACTIVE ON THE TRAFFIC NETS. DICK HAS BEEN EXTRAORDINARY IN HELPING ME DURING THE TIMES I AM IN THE SOUTH AND KEEPING QIN GOING. HE IS TO BE COMMENDED FOR ALL HIS HELP.

IVIN, W9ILF, WILL TAKE DICK'S PLACE AS CO-MGR. I AM LOOKING FORWARD TO HIS HELP THIS WINTER. IVIN IS AN EXCELLENT CW OPERATOR AND I KNOW HE WILL DO HIS BEST TO KEEP QIN RUNNING IN SPITE OF THE FACT THAT HE IS A BUSY GUY ! PLEASE GIVE HIM YOUR COOPERATION WHEN I LEAVE (AS I KNOW YOU WILL).

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

1576. Indiana Section Manager Election

Yahoo group: IndyHamRadio
Date: 2008-09-16 00:06:19 UTC
From: Ray Andrews
Topic: 1576 Message: 1576

Nominations have closed and the field of candidates for Indiana Section Manager has been fixed at 2, John Poindexter, W3ML, and myself. Ballots will be mailed to all Indiana ARRL members before October 1st.

I urge all of those who are eligible to vote to do so. As with any election, it is important for your voice to be heard. Of course, I would prefer that you vote for me. However, it is more important that you vote, regardless of the candidate.

The new Section Manager will be responsible for ensuring that the section staff is responsive to the needs of all Indiana amateurs, not just those who are ARRL members. He will also be responsible for maintaining close contact with all Indiana amateurs to correctly identify what those needs are.

If elected, I pledge that serving the needs of Indiana amateur radio operators will be my primary objective & will support ALL facets of our hobby. To accomplish this, I will make full use of an effective section staff, and will maintain close liaison with ARRL Headquarters, the Central Division Director, and amateurs throughout Indiana.

The following link will download a flyer outlining my background, my accomplishments during my 48+ years as an amateur radio operator, and details my goals as Section Manager:

http://www.qsl.net/k9dur/campaign_flyer.pdf

Vote for me or vote for John. Just Vote!

73, Ray Andrews, K9DUR

Hello,

I am not going to bore you with a long campaign letter as we are getting enough of that every day in the news.

Amateur Radio can only grow and get better if its members work together to improve it. I will be glad to work with anyone to improve all areas of this hobby.

So, like Ray said in his message, vote for your choice, whether it be me or him.

Ray, I know you had some health issues a few months ago. Without
going into details, do you feel that you are ready to tackle the
duties of Section Manager?

Bob...

Bob,

Yes, I am negotiating a speed bump of life in the way of a serious but not debilitating health issue. In July, my doctor found a squamous cell carcinoma in my throat. It was in the area of the left tonsil but above the larynx, so my voice will not be affected. When 1st diagnosed and before the tests were complete to determine the extent of the cancer, I decided that if the prognosis were not 100% positive, I would withdraw. However, a PET scan revealed absolutely no signs of cancer anywhere else, not even in the nearby lymph nodes. This resulted in an extremely favorable prognosis and, after consultation with my doctors, I decided to proceed with seeking the Section Manager position. If there had been any doubt at all that my doing so would compromise in any way my ability to serve Indiana amateurs, I would have withdrawn a month ago.

I have just completed the 5th week of 7 weeks of radiation therapy supplemented with infusion of a monoclonal anti-body to enhance the effectiveness of the radiation. Mid-treatment examinations last week showed no visible signs of the tumor remaining. Of course, the real test will be a follow-up CT scan after the radiation treatments are complete. I will follow the radiation with 4 rounds of chemotherapy to clean up any stragglers that the radiation may have left behind. The entire course of treatment should be complete in January.

During the treatments, my overall physical condition has been excellent. I have a persistent sore throat and do not have my normal physical stamina. However, we are proceeding with plans for a camping trip during the Illinois QSO Party in October to activate one of their more rare counties. Also, we will be making the trip to Fort Wayne for the ARRL State Convention in November. Both of these activities will be during the chemotherapy phase of my treatments, and the doctors & I do not feel that I will have any problems whatsoever.

That was the long answer. The short answer is that I do not believe that my current medical condition will in any way impact my ability to serve Indiana amateurs as the Section Manager. If I had any doubts as to that, I would already have withdrawn.

From: Mark Thompson
Topic: 1581 Message: 1581

North East Indiana Packet Net
Wednesday September 17, 2008
8:00 pm - 8:30 pm
(This event repeats every week.)
Location: North East Indiana

Notes:
This is an informal net that is held every Wednesday at 8PM on 145.010 @ 1200 baud. We use unconnected converse mode to communicate for a roundtable net setting. Use your "UNPROTO" command or equivalent to set Digi path(s) through the strongest station(s) needed between you and your destination. Only use those that are necessary! Have all your "Monitor" settings on so you can see everyone. There are various personal stations in Allen County at this time that you might be able to Digi through. Also at this time the Whitley Co. EMA/RACES Station KC9ANF is 50W @ 140'. N9BAV has a standalone Digi at Goshen at the GARC club station I believe at 85'.

1582. DCC (Digital Communication Conference) Online Registration Still Available

Topic: 1583 Message: 1583

John and Ray,

1- With all the talk about back ground checks in emergency communications is there any reason why you might not pass a back ground check or be hesitate to take one?

2- What are your opinions on hams that don't think they need training or haven't had any formal training in years for Emergency Communications?

3- With the ARRL recommending everyone take their Emcomm courses do you think they should offer FREE classes for members?

Thank You

Hello Tony,

In regards to your questions:

1. I have no doubt that I would pass a background check as I have never been arrested. As a former Federal Agent I had to have one, and now a school teacher I must have a background check every time I renew my teaching license.

2. I believe everyone should have the training necessary to do the job. A refresher course for the ones that have not had training in years would be a good thing for them as well. Times have changed and methods are improving.

3. Yes, if these courses are going to be required then we need to find a company or organization to sponsor them again and pay the fees. Before, the policy was that the member paid and then was reimbursed once they completed the course. Either way it should not cost the volunteer to take these courses.

Thanks Tony for the questions.

1589. Re: Section Manager

Yahoo group: IndyHamRadio
Date: 2008-09-18 12:30:45 UTC
From: Ray Andrews
Topic: 1583 Message: 1589

Tony,

1. I am a retired volunteer with the Civil Air Patrol. As such, I was required to pass a check with the FBI to work with the cadet program. I was also certified in our counter-drug program which required clearance by the FAA, DEA, & US Customs. So, I do not feel that I would have any problems in that area. However, I do share the concerns that ARRL HQ expressed with the ambiguous, over-pervasive background check required originally by the American Red Cross. I am happy to see that the ARC & the ARRL are reaching an acceptable middle ground in this area.

2. Training is essential, not just initially but continuously. Professionally, I retired from a field where the basic technology I was working with did not exist when I graduated college. The ARRL is currently in the initial phase of the training process; their goal is to get everyone through it for the 1st time. Eventually, perhaps we could have added to the courses a slimmed-down refresher course to keep those who have already had the courses keep up to date. On the other hand, do we not use those who have not had the formal training? Of course not, we just put them in positions commensurate with their capability and level of training.

3. Absolutely. I believe that the courses should be free, or at very least just the cost of the book, for ARRL members.

Subject: [illinoisdigitalham] 23rd Annual SW Ohio Digital Symposium, January 10 2009

Call for Papers, 23rd Southwest Ohio Digital & Technical Symposium

We are currently soliciting authors and papers for the 23rd Annual
Southwest Ohio Digital & Technical Symposium, to be held on 10 January
2009. This event will cover subjects concerning any digital mode of
communications, plus "leading edge" discussions of new technologies in
the analog modes.

If you're experimenting in any of these areas, we'd like to hear from
you! Please send your ideas to Jay Slough, K4ZLE, 2554 Hamilton Road,
Lebanon, OH 45036-8849, Phone: 513-934-0235,
Email: k4zle <at> embarqmail <dot> com

The symposium will run from 8:00 a.m to about 4:00 p.m. EST, in Thesken
Hall, Middletown Campus, Miami University, Middletown, Ohio.
For details on past events, and up to date plans for 2009 see
http://www.swohdigi.org

The DCC (Digital Communications Conference) is the premiere, national digital communication conference covering all digital voice & data modes held annually jointly by TAPR & ARRL.

The DCC is being held on September 26 - 28 in suburban Chicago near O'Hare airport.

This year D-STAR will have a significant presence at the DCC.

Icom has donated to TAPR a 1.2 GHz D-STAR digital voice repeater and data access point and TX RX has donated a 1.2 GHz triplexer. They will be combined with TAPR's 70cm D-STAR digital voice repeater using the TAPR callsign, KT7APR and connected to the D-STAR internet gateway. The repeaters will be operating & on display at the DCC and will allow D-STAR access within the hotel.

Ray Novak, N9JA of Icom will be at the DCC and have a display in the demonstration room.

On Friday night we're having the first ever D-STAR Friday Night Get Together at 7 pm. The agenda is below. Even if you can't attend the DCC daytime sessions we encourage you to attend the D-STAR Friday Night event.

On Friday there is a D-STAR technical session and on Saturday there are three D-STAR Introductory sessions.

The list of the speakers & topics at the D-STAR Friday Night event and the D-STAR Technical & Introductory sessions are below.

The DCC was last in Chicago in 1998 and won't be back again for a few years so you won't want to miss it, especially if you're near northern Illinois & the Chicago area.

73, Mark, WB9QZB
Chicago, IL

D-STAR Friday Night Get Together, 9/26 @ 7 pm
- Mark Thompson, WB9QZB, Introductions
- Ray Novak, N9JA, Icom
- Dan Smith, KK7DS, D-RATS Demo
- Pete Loveall, AE5PL, D-PRS Update
- Robin Cutshaw, AA4RC, DV Dongle, dplus, D-STAR Reflectors & more Update
- Kermit Carlson, W9XA, DCC & Chicago D-STAR Repeaters
- Q&A

D-STAR Technical & Introductory Presentations
- Friday, 9/26, 2:30 pm - D-STAR Uncovered, Pete Loveall, AE5PL
- Saturday, 9/27, 10:00 am - Intro to D-STAR Digital Voice & Data, Mark Thompson, WB9QZB
- Saturday, 9/27, 11:00 am - Intro to D-PRS, Pete Loveall, AE5PL - Saturday, 9/27, 1:00 pm
- Intro to D-STAR Digital Messaging & D-RATS, Dan Smith, KK7DS

DCC Forum Schedule Available
at: http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf (and may be attached)

Other DCC Presentations Include:

Bob Bruninga, WB4APR, APRS

Phil Harman, VK6APH, Software Defined Radio

Rick Muething, KN6KB, New Soundcard Mode for Winlink

Paul Rinaldo (ARRL), W4RI, SDR

Larry Wolfgang (ARRL) , WR1B, QEX Editor

Tom Clark, K3IO, AMSAT & Banquet Speaker

and many more...

Register for the DCC at: www.tapr.org/dcc

Walk-In Registration Available & Welcome

http://www.arrl.org/news/stories/2008/09/11/10327/?nc=1

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

1593. RE: [IndyHamRadio] General Ticket

Yahoo group: IndyHamRadio
Date: 2008-09-21 12:44:26 UTC
From: Don West
Topic: 1584 Message: 1593

Hi John,

Quite an accomplishment, getting your General ticket so quickly. Congratulations! You now have access to about 90% of all amateur privileges. There are tons of daily or weekly nets. The ARRL produces a booklet listing most of the regularly scheduled "non-rag-chew" nets at a reasonable cost I had one, but cannot find it at the moment. Perhaps by the time the CQ World Wide DX contest, I will have located it, hi, hi.

73,

Don, W9DEW

Subject: [IndyHamRadio] General Ticket

Just thought I would let everyone know that I got my general ticket tonight and was wondering if there are some good nets to get on in the SSB HF side. I got my technician license this spring. Having a great time with the ham stuff.

Hello all, the email lists for the Indianapolis Radio Club have just been re-worked. There is now a general reflector, and an "official news and information" broadcast list. If you would like to see what is going on or get in on the fun, point your browser to http://indyradioclub.org/rqstnewsletter.htm to get on one or both of the lists. You do not have to be a member of any group to be put on either of these lists.

D-STAR Enthusiasts -

This year for the first time at the DCC we will have a D-STAR Friday night forum.

Some of the major innovators in the D-STAR community will be presenting at the event.

Friday Night D-STAR Forum

7 pm Introductions, Mark, WB9QZB

7:15 pm DCC & Chicago D-STAR Repeater Update, Kermit, W9XA

7:30 pm Icom & D-STAR USA Update, Ray, N9JA

7:45 pm D-RATS Demo, Dan, KK7DS

8 pm D-PRS Update, Pete, A5PL

8:15 pm DV Dongle / dplus / Reflector / New Projects Update, Robin, AA4RC

9 pm Q & A / Socializing

If you have an interest in D-STAR the Friday night forum should be very interesting and you should try to attend it even if you hadn't planned on the attending the DCC on Friday or Saturday.

In addition to the Friday night forum there are several other D-STAR related presentations at the DCC on Friday & Saturday.

Friday DCC
 2:30 pm D-STAR Uncovered, Pete, AE5PL

Saturday DCC
10 am Intro to D-STAR, Mark, WB9QZB
11 am Intro to D-PRS, Pete, AE5PL
1 pm Intro to D-RATS & D-STAR Messaging, Dan, KK7DS
1 pm It's the Network, Erik Westgard, NY9D

Erik, NY9D's presentation includes a description of D-STAR high-speed data usage in the Minneapolis area.

TAPR's 70cm & 23cm D-STAR digital voice repeaters using the TAPR callsign, KT7APR will be operating at the hotel & connected to the D-STAR internet gateway providing D-STAR access within the hotel.

The DCC was last in Chicago in 1998 and won't be back again for a few years so you won't want to miss it.

More information available at:

DCC Information
http://www.tapr.org/dcc

DCC Forum Schedule
http://www.tapr.org/pdf/DCC_2008_Schedule_Preliminary.pdf

Look forward to seeing everyone at the DCC.

ARRL, TAPR Prepare for Digital Communications Conference in Chicago, September 26 - 28

Aficionados of digital communications are gearing up for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) September 26-28 in Chicago, Illinois. The ARRL/TAPR Digital Communications Conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees will have the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. The DCC is for all levels of technical experience -- not just for the expert. Not only is the conference technically stimulating, it is a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions are scheduled throughout the conference to introduce new technical topics for both beginners and experts.

Topics at the DCC include, but are not limited to: Software defined radio (SDR); digital voice (D-STAR, P25, WinDRM, FDMDV, G4GUO); digital satellite communications; Global Position System (GPS); precision timing; Automatic Position Reporting System (APRS); short messaging (a mode of APRS); Digital Signal Processing (DSP); HF digital modes; Internet interoperability with Amateur Radio networks; spread spectrum; IEEE 802.11 and other Part 15 license-exempt systems adaptable for Amateur Radio; using TCP/IP networking over Amateur Radio; mesh and peer-to-peer wireless networking; emergency and Homeland Defense backup digital communications; using Linux in Amateur Radio; updates on AX.25, and other wireless networking protocols.

QEX Editor Larry Wolfgang, WR1B, will represent the ARRL at the Conference. He will also be giving a talk "Writing for Publication -- It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, will also represent the League. Rinaldo will speak on "SDR Outlook."

The DCC provides a separate (and lockable) room for participants to bring and show off their latest projects. Tables and power will be provided. Participants are encouraged to bring their own equipment and display for all to see, learn, and ask questions about, as well as a small sign and/or flyer naming and describing their project.

D-STAR digital voice and data will be the focus of the DCC Friday evening session. Pioneers and leaders in D-STAR digital voice and data technology will be presenting the technical innovations in D-STAR and how it is being used worldwide. In addition to the Friday evening session, ICOM will be at the DCC demonstrating D-STAR radios in the demonstration room, and TAPR's 70 cm and 23 cm D-STAR digital voice and data repeaters (KT7APR) with Internet gateway will be on the air.

Sunday Seminar Speaker Announced

Each year, the DCC hosts an in-depth 4 hour seminar on Sunday. Past seminars have included such topics as Software Defined Radios, Spread Spectrum Design and Theory, RD Design and Deployment, PICmicro MCU Design and Development, Packet Radio Networks with Millions or Billions of Stations and others. Seminars are given by experts in their field -- this year is no different. Phil Harman, VK6APH, will present "Software Radio Through the Looking-Glass."

Harman, licensed for more than 40 years, has worked on leading-edge RF techniques related to receivers and transmitters. His current passion is the development of fully digital HF radios. Harmon co-writes the Software Defined Radio column in the RSGB Radio Communications journal and also co-authored the SDR chapter in the latest RSGB Handbook. He will guide participants through the basics of SDRs right up to the very latest techniques that digitize signals directly at the antenna socket. Using diagrams and a minimum of math, Harmon will cover such subjects as front end design, mixers, I and Q signals, digital up and down conversion, AGC techniques, noise blanking and high efficiency power amplifiers. The presentation will be highly interactive, so be sure to bring along that question that has been puzzling you for so long!

Conference presentations, meetings, and seminars will be held at the Holiday Inn Hotel Elk Grove Village, Illinois. It is highly recommended that participants book rooms prior to arriving. A block of rooms at the special DCC room rate of $89.00 single/double is available; this rate is good until the block is all sold out. The hotel provides a complimentary shuttle to and from O'Hare Airport.

1601. Operating Event

Yahoo group: IndyHamRadio
Date: 2008-09-25 22:18:04 UTC
From: Robert Griggs
Topic: 248 Message: 1601

We are planning a test of some of the equipment and setup strategy on Saturday Oct 18th at Memorial Park. Please try to attend and lend your support.

We are looking for operators and loggers to come work the station. We are also looking for stations to contact during our event. We will be on the air around 10 AM and operating till dark or later. We will be operating all field day bands and modes that we can locate equipment for.

Below is a press release from the Henry County Amateur Radio Club

Field day 2009

In preparation for the HCARC 2009 Field Day on June 7th and 8th, we strongly encourage all members who can to participate in this instructive and enjoyable event.

We are planning for our members to bring a sizeable amount of equipment this coming year. In 2008 we were on air with only three rigs. In 2009 we want to be on the air on all bands and in all modes. As you can see, this will require a lot of coordinating, support and planning. We would like to request that all members who are joining us as volunteer operators or who have needed equipment contact our event coordinator Howard Dudley KC9JRW@... as soon as possible. This will facilitate our planning process.

Not only will the stations need to be set up with proper field antennas, we will need operators and loggers who can commit to a few hours of on air time. The loggers do not need to be hams so if you have a friend who can work a keyboard bring them along.

Field Day was first held in 1933 and now uses all modes including satellite communications on HF and UHF/VHF bands. In 2009 we would like to work 160-80-40-20-15-10-6-2 Meters, which are the bands allowed.

As you can see we will need eight rigs with antennas and operators to man them for the 24 hour event for each mode of operation. By using control operators we can use techs on the upper bands to keep making contacts and start them thinking about an upgrade so they can start to enjoy the world of HF.

Equipment needed for the 2009 Field Day

* Rigs for all bands
* Rigs for all modes
* Antennas
* Generators

* Lighting
* Coax
* Twin lead
* Grounding equipment
* Antenna support rope
* Operators with times that they can be counted on to man a station.
* Loggers to track contacts and duplicates

We are planning a test of some of the equipment and setup strategy on Saturday Oct 18th at Memorial Park. Please try to attend and lend your support.

If you are unable to attend our September meeting but can join us for our test field day please contact Howard Dudley KC9JRW@.... We are now working on antennas at Jays' class on Wednesday nights at 1800 hours at the EMA building, any help would be appreciated

73's KC9JRW

1603. So-called experts.

Yahoo group: IndyHamRadio
Date: 2008-09-26 01:37:25 UTC
From: kc9brz
Topic: 1603 Message: 1603

[Rant-mode-on]

I learned something this week. That is to keep a copy
of FCC Rules Part 97 in the car and with whatever other
ham radio station I'm operating.

If for no other reason, than to not be bamboozled by
some ham who acts like he's saying what's in Part 97
when in fact, he's spouting off his own personal
interpretation of "the way things ought to be."

Next time some purist-of-the-airwaves tries to
falsely claim authority of Part 97, I'll be tempted
to respond "10-4 good buddy! See ya on the flip side.
This heeyar be kay-see-nine-beeyar-zed!"

[Rant-mode-OFF]

One of the REAL experts is John Johnston W3BE. He used to work for the FCC. He now writes a regular column on rules and regs in Worldradio magazine. If you ever have any questions you can reach him at http://w3be.home.att.net or john@.... I think he'll be glad to help.

1605. D-STAR Repeaters On-Line at DCC (Digital Communications Conference)

Yahoo group: IndyHamRadio
Date: 2008-09-26 20:21:04 UTC
From: Mark Thompson
Topic: 1605 Message: 1605
Attachments: 2 described; binary payloads are missing from this source WARC

The TAPR D-STAR Repeaters are on-line at the DCC (Digital Communication Conference):

KT7APR A 1292.0 (-20 MHz)

KT7APR B 441.500 (+5 MHz)

KT7APR 1242.0 DD

Several DCC attendees are monitoring the 70cm repeater. Give us a call today, Friday or tomorrow, Saturday.

If you're at the DCC or in the Chicago area stop by the DCC demonstration room & take a look at the repeaters and the Icom equipment display.

Tonight, Friday at 7 pm is the D-STAR Friday Night Forum. Some of the leading innovators in the D-STAR community will be presenting.

More information about the DCC is available at: http://www.tapr.org/dcc

Thanks to Icom for donating the 23cm D-STAR repeaters & controller and thanks to TX RX for donating the 23cm triplexer to TAPR.

Well, I've had this Cushcraft 2 meter ringo for quite a while, but never installed it, so it's in
out-of-the-box shape. I've tried selling it at 3 hamfests...no luck. So, free to a good home.
Come and pick it up in Carmel....just throw a few extra bucks in the collection plate at church this weekend, and I'll be happy.

Cheers,

1608. Section Manager Election

Yahoo group: IndyHamRadio
Date: 2008-09-30 02:19:07 UTC
From: Ray Andrews
Topic: 1583 Message: 1608

After further discussions today with my doctors about the future course of my cancer treatments, I have decided to withdraw my nomination as Indiana Section Manager. The ballots may have already been mailed. However, I mailed a letter today to ARRL-HQ advising them of my official withdrawal. Therefore. The ballots are of no consequence.

Congratulations to John Poindexter, W3ML, on his election.

Topic: 1583 Message: 1617

I am a little disappointed to hear that ARRL said that the election has to go on regardless. I am not certain what they would do if I were to win. In any event, the best way to avoid that situation is for everyone to vote for John Poindexter, W3ML. Please help spread the word.

For those who expressed concerns that my decision to withdraw was due to a worsening of my condition. That is not the case. It was due to a better understanding of what the recovery process will entail. I should finish up all treatments in early January. However, after further discussions with my doctors, I realized that the recovery is not instantaneous after treatments end. It will be nearly a year before I am back to where I was before treatments began. Since this is a shortened term (18 months instead of 2 years), that would mean that I would not be able to provide the effort & dedication required until the term would be half over. That would not be fair to the members of the Indiana Section.

1619. DCC (Digital Communications Conference) A Success & Returning to Chicago Next Year

Yahoo group: IndyHamRadio
Date: 2008-10-04 22:33:14 UTC
From: Mark Thompson
Topic: 1619 Message: 1619

http://www.arrl.org/news/stories/2008/10/02/10371/?nc=1

ARRL/TAPR Digital Communications Conference: "Pretty Interesting!"

The main presentation room at the 2008 ARRL/TAPR DCC provided ample seating and tables, as well as power supplies, for laptops. [Larry Wolfgang, WR1B, Photo]

Kermit Carlson, W9XA (left), and Rick Muething, KN6KB, go over the final arrangements just before Muething's presentation on audio/visual equipment. Carlson coordinated the a/v for the DCC. [Larry Wolfgang, WR1B, Photo]

Almost 150 aficionados of digital communications came to Chicago for the 27th annual ARRL/TAPR Digital Communications Conference (DCC) the weekend of September 26-28. This conference is an international forum for radio amateurs to meet, publish their work and present new ideas and techniques. Presenters and attendees had the opportunity to exchange ideas and learn about recent hardware and software advances, theories, experimental results, and practical applications. Not only was the conference technically stimulating, it was a weekend of fun for all who have more than a casual interest in any aspect of amateur digital electronics and communications; introductory sessions were scheduled throughout the conference to introduce new technical topics for both beginners and experts.

One of the attendees was QEX Editor Larry Wolfgang, WR1B, representing the ARRL. He gave a talk "Writing for Publication - It's Not Rocket Science (Even if You Are Writing About Rocket Science!)." Retired ARRL Chief Technology Officer Paul Rinaldo, W4RI, also represented the League, speaking on "SDR Outlook." Central Division Vice Director Howard Huntington, K9KM was present, as was ARRL Contributing Editor H. Ward Silver, N0AX.

Wolfgang gave his presentation on Friday morning and said he talked with many participants throughout the conference who told him that he had them enthused about writing something for QEX. "It also seemed like almost everyone there was making a point to stop me in the hallways or at mealtimes to tell me how much they are enjoying QEX, and to thank me for the effort I putting into the magazine," he said.

Friday was a full day of technical presentations, including "A Protocol for Multicast Weather Data Distribution over AX25," by Nick Luther, K9NL; "SuitSat-2 Update," by Steve Bible, N7HPR; "EcomScs and GateWayScs AX25 Packet Radio E-Mail," by John Blowsky, KB2SCS, and "Frequency and Other New Initiatives in APRS," by Bob Bruninga, WB4APR. The last presentation of the afternoon was "D-STAR Uncovered," by Peter Loveall, AE5PL.

The DCC provided a separate demonstration room for participants to bring and show off their latest projects. Participants were encouraged to bring their own equipment and display for all to see and learn. Wolfgang said he had some "play time" in this room after all the presentations on Friday. After dinner that evening, he said there was "a string of D-STAR presentations starting at 7 PM and lasting until after 10 PM. These were all very interesting presentations, including the D-RATS messaging software by Dan Smith, KK7DS.

Peter Loveall, AE5PL, presented "D-PRS Update" about ways the D-STAR data links can be used to send and plot APRS position maps or interface to the APRS system. Robin Cutshaw, AA4RC, gave a presentation about DV-Dongle, a PC add-on that allows connection to D-STAR repeaters around the world through your PC and an Internet connection. Pretty interesting!"

In addition to the main technical presentations on Saturday, there was also a full day of introductory sessions, mostly about digital voice and D-STAR.

Also on Saturday, Matt Etttus, N2MJI, gave a report on the Ettus Research USRP2. Tom Clark, K3IO, gave an "AMSAT Update." Paul Wiedemeier, KE5LKY, presented his paper on "Using UDPcast to IP Multicast Data over Packet Radio." Paul Rinaldo, W4RI, gave his "SDR Outlook" that covered the international regulatory front and presented some of the concerns that some world governments have with regard to the flexibility of SDR. Scott Cowling, WA2DFI, gave an "HPSDR (High Performance Software Defined Radio) Update" during which he described the various circuit boards that make up the HPSDR project. He also demonstrated a complete working radio in the demo room. Jerry Shirar, N9XR, presented a paper called "Clocking the Data," concerning the use of an inverter and a crystal to form a Colpitts oscillator.

Victor Poor, W5SMM, gave an update on Winlink 2000. "He reported that there is one Web site, five Common Message Server sites around the world, 150 Radio Message Service Pactor Gateway sites, 800 RMS Packet Gateway sites and over 13,000 registered users," Wolfgang said. "He also mentioned that inactive users are purged from the system from time to time." Rick Muething, KN6KB, described his "WINMOR Soundcard ARQ Mode for Winlink HF Digital Messaging." Wolfgang said that this was a much anticipated presentation: "Rick reported that WINMOR is 3 to 4 months from beta testing. His preliminary comparisons to Pactor 1, 2 and 3 use a simulator. He indicates that WINMOR will have better throughput than Pactor 1 and comparable to, or perhaps a bit better than Pactor 2, but not quite as good as Pactor 3. He indicated that the efficiency is within about 70 percent of Pactor ARQ."

The TAPR Annual Meeting was held after all the presentations on Saturday where the Board of Directors discussed the idea of coming back to the same hotel for next year's DCC. "The local group that supported DCC this year, including Mark Thompson, WB9QZB, and Kermit Carlson, W9XA, did a great job of providing AV support," Wolfgang said. "Ron Steinberg, K9IKZ, who owns a local audio/visual company, provided two large projection screens and projectors, so every presentation was shown on both sides of the room, as well as on a widescreen TV outside the room. The audio was very easy to hear, even if you were in the hall outside the room or in the demonstration room; the set-up was left there from the W9DXCC Convention the previous weekend. They offered to provide the same support for next year, if the DCC returned. So, the decision was made to break with tradition, and return to Chicago next year, September 25-27."

Phil Harman, VK6APH, presented the Sunday morning seminar, "Software Defined Radio Through the Looking Glass." Wolfgang said he found Harman's presentation to be understandable "at my level of knowledge, and he gave a lot of good insight into many of the design decisions that went into the High Performance Software Defined Radio Project. I found his descriptions of how the hardware and software work to be very interesting. The four hours went by quickly."

For more information on the 2008 Digital Communications Conference, please visit TAPR's DCC Web page.

At 05:54 PM 10/4/2008, Ray Andrews wrote:
>I am a little disappointed to hear that ARRL said that the election
>has to go on regardless. I am not certain what they would do if I were to win.

I can see a number of possibilities:

1. Assuming the ARRL has your letter in hand stating that you are
bowing out of the election, if you win, they simply move down the
list to the person with the next highest vote total.

2. Assuming the ARRL ignores your letter, you tell them that you will
not serve, so they either move down the list to the person with the
next highest vote total or they have another election (I can't
believe they'd do this).

3. Assuming the ARRL ignores your letter and says "hey, pal, you got
yourself elected, it's your problem now", then you'd have to resign
as soon as you are installed in the position and the ARRL holds
another election.

Hopefully, sanity will prevail and they choose option #1.

>In any event, the best way to avoid that situation is for everyone
>to vote for John Poindexter, W3ML. Please help spread the word.

As Secretary for the Hendricks County Amateur Radio Society, I have
advised HCARS members via email of your situation and your desire for
Mr. Poindexter to win the election.

At 01:29 PM 10/4/2008, KB9BVN wrote:

>Bob...what would like to see the new SM address first?

Emergency communications. And I see two facets to this issue that need immediate attention:

1. Organization. We have a lot of different people going many different directions and I think that has diluted our abilities to serve. Granted, a lot of the people involved in amateur radio emergency communications have great relationships with their local officials and I don't want to see some larger entity intrude. But I think that in ARES, our structure in this state is weak. We have county ECs who don't do anything and are merely placeholders. We have many districts that don't have a DEC. And I'd like to see more leadership from our SEC.

2. Training. I believe that we are, in general, woefully under-prepared to deal with a major emergency. We have to push our people to complete the FEMA NIMS training. We have to push our people to take the ARRL emergency communications courses. We have to push our people to get involved in local drills and exercises. Yes, we do have people in the ranks who have done all the right things and who practice their skills on a regular basis. But how many people can we really count on in an emergency? And how many of those can hit the ground running?

I was just reading another list and they are talking about radio stations that are setup in local museums and places like that. They are manned by hams that agree to discuss amateur radio with visitors, in the meantime hams can come in and operate the equipment.

Does the Children's Museum or the Indiana State Museum have a station? If not, I wonder if the local ham community provided the equipment, if they'd be interested in doing something like this.

This is great idea and would be nice if people have the chance to see it when they visit the museum. In counties that do not have a museum that is open to public constantly, the public library should have space for a static display.

The Starke County Amateur Radio Club did just this. They set up a display in the entrance way display case for an entire month. People were introduced to Amateur Radio through the various items place on display. If you would like more information on what was included contact Tony, W9AL who spearheaded the project.

1631. Press Release: Henry County Amateur Radio Club

Yahoo group: IndyHamRadio
Date: 2008-10-13 16:07:49 UTC
From: Robert Griggs
Topic: 1631 Message: 1631

Press Release:

Henry County Amateur Radio Club

October 13, 2008

In preparation for the HCARC 2009 Field Day on June 27th and 28th 2009. The Henry County Amateur Radio Club is having a practice field day at Memorial Park at New Castle IN on Saturday October 18th. This practice will enable our members to work out problems in setting up antennas and equipment that would be needed in an emergency situation. By preparing early we hope to make next year's national field day smoother and more enjoyable for our members. During this practice we hope to raise eight antennas and bring eight stations on air with the first station being operational within one hour of arriving on site. This will be in conjunction with the national test of emergency communications held by the ARRL. We also plan for this to be a great learning experience with great food and great companionship with the many hams who will be attending.

Howard Dudley, KC9JRW

Subject: Preview the 2008 ARRL On-Line Auction NOW!

PREVIEW WEEK STARTS OCTOBER 16, AT 10AM ET

Just what is preview week? You have an entire week before bidding starts to register to bid, and browse through new equipment, vintage equipment, and products & services. You can also tour our virtual Flea Market category from the comfort of your chair and check out the many bargains.

PLEASE NOTE THAT YOUR PASSWORDS AND USER IDS FOR THE ARRL WEB-SITE ARE NOT TRANSFERABLE TO THE ARRL ON-LINE AUCTION WEBSITE. YOU WILL NEED TO REGISTER HERE IN ORDER TO BID: www.arrl.org/auction

---

The 2008 ARRL On-Line Auction
will open for bidding on October 23rdat 10AM ET.

Bidders will be treated to over 160 items to browse through and bid on, including a vast array of QST Product Review items, new and pre-owned equipment and other goods and services.

Proceeds from our yearly On-Line Auction benefit ARRL education programs including activities to license new hams, strengthen Amateur Radio's emergency service training, offer continuing technical and operating education, as well as creating instructional materials.

This event would not be possible without the generosity of our donors. Our sincere thanks to all who donated items for this year's auction and a special mention to the two organizations below who have chosen the highest level of participation as 2008 ARRL On-Line Auction Golden Gavel Sponsors.

Golden Gavel Sponsor - Icom America, Inc. donates the IC-7000

The ICOM IC-7000 represents the next generation in all-mode HF/VHF/UHF mobile transceivers. DSP at the IF level is the cornerstone of this impressive new multi-bander. In fact, the 7000 employs two DSP chips to work its magic. Imagine having 41 bandwidths available - standard! You can even select sharp or soft filter shape. And variable twin PBT allows you to either narrow the IF passband, or shift the entire passband to eliminate QRM. All the controls are intuitive to use.

Eight of the most-used radio functions are controlled by dedicated function keys grouped around the display for easy visibility. One quick touch turns the function on and off. A longer touch activates adjustment of the function's setting. An internal memory keyer provides four memories for station information or contest exchanges. The keyer also

performs automatic repeat, automatic contest serial numbers and cut-numbers. The Digital Voice Recorder (DVR) function has a front panel REC control that allows you to record incoming signals for up to 25 minutes.

Other features include: a detachable control head (requires optional separation cable), 503 memories, S/PWR/SWR meter, RIT, Preamp, RTTY Demodulator, Attenuator, adjustable SSB bandwidth, NTSC video output, DTMF memory, VOX, full break-in and adjustable CW pitch.

The IC-7000 comes with the HM-151 backlit remote mic, spare fuses, key plug and DC power cable.

Please click the ICOM® link HERE for more information.

< /div>
Golden Gavel Sponsor - R4 Systems, Inc. donates the PROTEUS DESIGN SUITE from Labcenter

Proteus PCB design combines the ISIS schematic capture and ARES PCB layout programs to provide a powerful, integrated and easy to use suite of tools for professional printed circuit board design.

All Proteus PCB design products include an integrated shape based autorouter and a basic SPICE simulation capability as standard. More advanced routing modes are included in Proteus PCB Design20Level 2. The Advanced Simulation Feature (ASF) option is also included in this package.

The following are some of the Proteus highlights:
* Full feature ISIS schematic capture with support for hierarchical design, bus pins, configurable bill of materials.
* Netlist based ARES PCB layout with support of up to 16 copper layers, 10nm resolution, any angle component placement, full electrical and physical design rule.
* Basic Simulation.
* Unlimited Shape-based Power Planes.
* Global Shape Based Autorouting.
* Command Driven Interactive Autorouting.
* 3D Board Visualization.
* Gerber standard output files.
* ODB++ Manufacturing Output.
* Gate-Swap Optimizer.
* Board Auto-placement.
This Proteus package gives the electronics designer all the tools necessary for Concept to PCB layout in a easy to use package.It includes Schematic capture, Advanced Simulation, PCB Layout, Shape-Based Autorouting for the most demanding of boards. Proteus is the CAD package every HAM would like to own. A copy of our Free Demo can be downloaded at our website.=0 D

Please click the R4 link HERE for more information.

We would also like to extend our sincere thanks to all of our ARRL Business Partners, listed below, for making donations to the 2008 ARRL On-Line Auction. Please visit their links to view the great assortment of products they offer.

1633. NAQCC Sprint tonight!

Yahoo group: IndyHamRadio
Date: 2008-10-14 22:54:28 UTC
From: KB9BVN
Topic: 1633 Message: 1633

NAQCC Sprint Tuesday night!
This coming Tuesday evening will be the monthly NAQCC Sprint for October, 2008.

I will refer you to the proper URL:

http://www.arm-tek.net/~yoel/sprint200810.html

There you will find all the details as to time, frequencies and also a special prize.

This month's Special Award goes to the winner of a drawing among the following: Those working the most different special event calls (N3A/#) in each of our 5 sprint divisions.

This is a monthly event that caters to the CW veteran, the CW newcomer, straight key and bug fans. All are welcome to participate (this includes QRO); but you must use QRP power levels to compete for awards.

Come join us and have a real good time!

Back in the 80's when I was a newly licensed Amateur Radio Operator, the local clubs used to have balloon launches and monthly foxhunts (transmitter hunts). I haven't heard of any of that in the area lately, and I was curious as to whether this kind of thing goes on?

I would be interested in participating in UHF/VHF fox hunts if there are any in the central Indiana area. Do we have such a thing today?

Subject: ISS VOICE QSO REMINDER

Richard Garriott is aboard and has already started making random voice QSO's from the ISS. As a reminder do not transmit on the DOWNLINK. It has been reported that many stations are doing this. The DOWNLINK is where you LISTEN ONLY! Transmitting on the downlink does 2 things: 1) QRM's anyone who is listening for their exchange and 2) You can transmit on the downlink until hell freezes over and never get a reply, no one is listening aboard the ISS to the downlink!

Transmit on the UPLINK. The UPLINK is 144.49 FM and the DOWNLINK is 145.80 FM

Most modern radios can be set up for "odd splits"

Those frequencies are at the midpoint of a pass when the ISS is at TCA (Time of Closest Approach). You should correct for doppler shift according to the chart I have uploaded to the files section of the yahoo group in the space folder. Or e-mail me and I'll send it to you.

There are set ups for both rigs that will do 1kHz steps (857D, 2000, 746, etc) and rigs that only do 5kHZ steps (most 2 and dual band mobiles and HT's). You don;t need much of an antenna for the ISS, even the standard rubber duck might work.

The ISS QSL's too so don't forget to claim your card. I'll post that info into the file folder also.

Good Luck, Have Fun and REMEMBER.....LISTEN on the DOWNlink!!

73,

John - AG9D

Subject: ARISS SCHEDULE/INFO UPDATE

Forwarded from ARISS:

All,

It was quite an exciting day for ARISS yesterday with the Expedition 18 crew docking and the start up of Richard Garriott's ham radio activities. Here are some updates and plans for ARISS during Richard's flight.

Richard, W5KWQ, fired up the radio and started SSTV operations just a couple of hours after docking. Richard planned to support a slide show mode using the SpaceCam software and the SSTV interface box at the beginning of his flight, which is what you saw yesterday. A number of the images were sent down using Martin 1, a higher quality but longer transmit SSTV mode. The Russian team, led by Sergey Samburov, RV3DR, had requested testing several high quality image modes during Richard's flight, so don't be surprised if you see Martin 1 or other high resolution SSTV modes during Richard's flight. We have asked Richard to move to the default Robot 36 mode for the time being and to space out the images once every 3 minutes to reduce the radio transmit duty cycle. Richard confirmed that he will support this. He also has transitioned to the VC-H1 as this will allow Richard to use the computer to support his Earth ops and still support SSTV.

We have had a number of image uploads on the Gallery site by hams all around the world. The ARISS team appreciates your volunteer support through all the SSTV images that have been uploaded. A volunteer ARISS team is working 24/7 during Richard's flight to review these images, to understand how the SSTV operations is progressing, and to include some of these images on the Gallery pages. ALL the images you have uploaded have been archived and are being reviewed. Please continue to upload these images as they help the ARISS team analyze and redirect the SSTV operations. You are welome to upload these through the gallery page:

http://www.amsat.com/ARISS_SSTV/

We also have a blog available that provides the latest ARISS information for this expedition. That blog is located at:

http://www.ariss-sstv.blogspot.com/

You can also reach these sites through the ARISS website:

http:/www.ariss.org

Some other information:

SSTV uplink/downlink: Richard is really not supporting SSTV uplinks during his short duration mission. The downlink is on the normal ARISS VHF downlink, 145.80.

General Voice Contacts: Use the regular general voice frequencies. 145.80 downlink. Uplinks are 144.49 in Region 2 (Americas) and 145.20 for Region 1 (Europe, Africa, Middle East) and Region 3 (Australia, Asia). Richard and Mike Fincke, KE5AIT, have been on the air on voice since shortly after docking yesterday.

Sleep Period Activity: We have asked the crew to turn packet on during sleep periods. Our intent is to keep SSTV active during their work day. The rationale for this is that we are having some issues with the software based (SpaceCam) SSTV system occasionally keeping the radio keyed down after an image transmission. And we have a limited set of Russian batteries available during Richard's flight for the VC-H1.

You are witnessing and are a part of history: Some of you have asked why Richard is using his callsign for some QSOs and SSTV contacts instead of the ISS station callsigns. There is a long and proud history that is attached to the Garriotts. This includes ham radio in space and their personal callsigns. 25 years ago, Richard's father, Owen Garriott, W5LFL, initiated the first ham radio contacts from space on the STS-9 SAREX mission. Richard, W5KWQ, is following in his father's footsteps, using the ARISS ham radio system extensively on his first flight. And Richard's callsign is actually his grandfather's original callsign. So you can see that this mission touches 3 generations of ham radio and 2 generations of ham radio in space!

School Contacts: School contacts from this day forward are tentatively scheduled as follows:

Challenger Learning Center Combined Contact #1, telebridge via W6SRJ; on Thu 2008-10-16 16:39 UTC
Howard B. Owens Science Center's Challenger Center (Lanham, MD) Challenger Learning Center of Columbia (Columbia, SC) Verizon Challenger Learning Center at MOSI (Tampa, FL) Brownsburg Challenger Learning Center (Brownsburg, IN)

Budbrooke Primary School, Warwick, England, direct via GB4OBS Fri 2008-10-17 11:05 UTC

Challenger Learning Center Combined Contact #2, telebridge via W6SRJ; on Fri 2008-10-17 15:30 UTC
Indianapolis Challenger Learning Center (Indianapolis, IN) Challenger Learning Center at Paducah (Paducah, KY) Challenger Learning Center

St. Louis (St. Louis, MO)

Austin Liberal Arts and Sciences Academy, Austin, TX, direct via K5LBJ Sun 2008-10-19 13:14 UTC

Pinehurst School, Ashland, Oregon, telebridge via W6SRJ Mon 2008-10-20 15:13 UTC

National Planetarium, Kuala Lumpur, Malaysia, direct via 9M2RPN Tues 2008-10-21 08:30 UTC

Enjoy the ARISS operations. And my thanks to the international ARISS team for their outstanding volunteer support.

73, Frank Bauer, KA3HDO

Date: 2008-10-17 15:57:31 UTC
From: Robert Griggs
Topic: 1643 Message: 1643

I just found out about the passing of Rev. Craig this morning. Below is a copy of his obituary.

****
****

William Milton Craig, 93, of Auburn and formerly of Mount Summit passed away Monday at Wesley Health Care in Auburn. He was born March 5, 1915 in Ottawa, Canada to the late Samuel and Mary (Stearns) Craig.

He was a retired minister in 1980 and did a lot of interim work after retirement. He had lived in Mount Summit since 1973 and had moved to Auburn in the last five years. He was a member of the First Christian Church (Disciples of Christ) of Auburn and had pastored the Mount Summit Christian Church (Disciples of Christ) for seven years. He was a member of the 32nd Degree Mason Scottish Rites. He was past president of the Disciples of Amateur Radio Fellowship and was also an accomplished artist.

Survivors include his wife of 66 years, Margaret A. Craig; a son, Dr. Robert (wife: Darlene) Craig of Auburn; a daughter, Ruth (husband: Richard) Kendal of Ossian; 10 grandchildren; 13 great-grandchildren, and a brother, Everett Craig.

In addition to his parents, he was preceded in death by two daughters, Mary Jane Pifer and Donna Craig; a grandson, Carl Pifer; a sister, Muriel Clayton; two brothers, Lorne and Leonard Craig.

Services will be at 11 a.m. Friday at the Mount Summit Christian Church in Mt. Summit with Reverend Mark O'Brien officiating. Burial will follow in Mount Summit Cemetery. Friends may call from 3-7 p.m. Thursday at Hinsey-Brown Funeral Service in New Castle. Memorial contributions may be given to the Mount Summit Christian Church or the First Christian Church of Auburn, P.O. Box 89, Auburn, IN 46706. Online condolences may be made at www.hinsey-brown.com.

1645. Good Book

Yahoo group: IndyHamRadio
Date: 2008-10-20 14:28:40 UTC
From: KB9BVN
Topic: 1645 Message: 1645

I have been a QST reader for years and years and years...and a few years ago Ward Silver N0AX started a section called "Hands on Radio Experiments". The ARRL has published the first 62 or so of these experiments in a easy to follow book called "ARRL's Hands on Radio Experiements". I just got my new copy and I have been looking it over all morning, and I just had to send an email suggesting anyone that likes to experiment with radio stuff, ought to get a copy.

The back chapter is great, it's like a miniature Paul Harden Databook for homebrew components. A must have...covering inductors, caps, voltage regulators, and more.

I think I bought the book for about $20...I don't remember. If you want to have ALL the parts he uses in the book, the ARRL has a parts kit that goes with the test for about $80.00 as well.

Sections Include:

Fundamentals
Semiconductor Basics
Building Block Circuits
Power Supplies
Filters
Oscillators and Buffers
Transmission Lines and Impedance Matching
Workshop and Design Techniques

Basically with this book, a proto board, a volt/ohm meter and maybe a scope, you'll be set for days of Ham Radio fun.

1647. Tippecanoe County Emergency Communications Level I (EC-001) Class

Yahoo group: IndyHamRadio
Date: 2008-10-23 14:00:46 UTC
From: Stephen M. Parker
Topic: 1647 Message: 1647

Tippecanoe County ARES will be conducting local training classes for the ARRL's Emergency Communications Level I (EC-001) course. The classes will be held in three, 2-hour sessions, beginning just 2 weeks from tonight, on October 30. The three classes will be conducted 3 weeks in a row, on Thursday evenings, from 6:30-8:30 p.m. local time. All amateurs are invited and welcome. Being a member of ARES or TARA is not a requirement.

ADVANCED REGISTRATION IS REQUIRED TO ATTEND THIS COURSE.

Those interested in taking the course should plan to attend all 3 sessions:

Thursday, OCT 30 6:30-8:30pm
Thursday, NOV 6 6:30-8:30pm
Thursday, NOV 13 6:30-8:30pm

The EC-001 course, Introduction to Amateur Radio Emergency Communications, is a basic course to raise awareness and provide additional knowledge and tools for any emergency communications volunteer. This course has 23 lesson units and is a prerequisite to Level II, EC-002 and Level III, EC-003, Amateur Radio Emergency Communications courses.

There is no cost to attend the training sessions, although if you wish to take the exam for EC-001, the cost will be $14.00. You will then receive a certificate from the ARRL, and be registered as having successfully completed their EC-001 course. (The online EC-001 course cost is $45 for ARRL members, $75 for non-members, so this is a considerable cost savings.)

Abbreviated handouts will be provided during the classes, but the full contents of the course cannot be provided at this low cost. The entire course transcript is available for sale from the ARRL for $19.95 here: http://www.arrl.org/catalog/?item=8462 <http://www.arrl.org/catalog/?item=8462> (Having the book is certainly NOT required to attend the local course, but some may find it helpful to have the

book to follow along during the classes. This is purely at your own
discretion.)

LOCATION:
The classes will be held in Room C of the SIA Training and Reception
Center,
at 5500 SR 38 E, Lafayette, Indiana. Pre-registration to take the class
is
REQUIRED, as we must give your name to SIA security at the main gate in
order
to allow you access to the Training Center. Parking is very close to the
building, and there is easy access to the training room. Special thanks
to
WA9DDI for making the arrangements to use the facilities there, and to
Subaru
of Indiana Automotive (SIA) as our gracious host. (Directions or maps
will be
provided to those of you who may not know how to get to SIA's Training
Facility.)

IMPORTANT:
All participants MUST be pre-registered at LEAST 72 hours in advance of
the
first class, preferably much sooner. Please contact WR9A
(wr9a@...
<http://groups.yahoo.com/group/ARES-Tippecanoe/post?postID=JEDhndrkWjgEi\

further information and to register for this
EC-001 class.

This is an exciting opportunity for all local hams, and we encourage
anyone
that is able to sign up for these sessions. Class size will be limited
to
about 35 people, and is expected to fill up fast. Reserve your spot as
soon as
possible! 73

1648. Fw: ISS CrossBand Repeater Turned On

Yahoo group: IndyHamRadio
Date: 2008-10-28 21:19:53 UTC
From: Mark Thompson
Topic: 1648 Message: 1648

----- Forwarded Message ----
From: John <yp671@...>
Sent: Tuesday, October 28, 2008 10:13:54 AM
Subject: ISS CROSSBAND REPEATER

Reports from the ISS indicate that Mike Fincke has turned on the
D-700's crossband repeater function.

The up and down links are:

Crossband FM repeater downlink: 145.80 MHz (Worldwide)
Crossband FM repeater uplink: 437.80 MHz (Worldwide)

You operate as if you are working AO-51. You'll talk "through" the ISS
to others hams on earth.

Have fun,

John - AG9D

I saw this program this week on PBS & it's very interesting.

Fractal Antennas - NOVA

NOVA's new episode, Hunting the Hidden Dimension
http://www.pbs.org/wgbh/nova/fractals/

The episode features Nathan Cohen, amateur radio operator and co-founder of Fractal Antenna Systems, Inc.
http://www.fractenna.com/nca_cohen_bio.html

His interview explains how he first used the deisgn for his amateur radio hobby.

BTW, he attended a NSF summer course for high school seniors in physics and astronomy at the University of Iowa in 1970s. Another professional touched by James Van Allen's work!

1654. VHF/UHF Digital Voice Overview at Ft. Wayne Hamfest, Saturday, 11/15 @ Noon

Yahoo group: IndyHamRadio
Date: 2008-10-30 23:30:14 UTC
From: Mark Thompson
Topic: 1654 Message: 1654

VHF/UHF Digital Voice Forum at Ft. Wayne Hamfest, Saturday, November 15th @ Noon in the White Room

The forum will feature a Digital Voice Overview AND a D-STAR discussion.

You can see a preview of the VHF/UHF Digital Voice Video Overview at:
http://www.arvideonews.com/dv/index.html

D-STAR digital voice & data repeaters are already operating in Indianapolis so this will be a great opportunity to learn more about digital voice & D-STAR technology.

Look foward to seeing you at the meeting.

73, Mark, WB9QZB

P.S. - Please forward this announcement to other club newsletters & lists.

New ARRL Satellite Book Available

The ARRL Satellite Handbook. Click here http://www.arrl.org/news/files/sathb.pdf to peruse the Table of Contents and a portion of the first chapter.

The ARRL Satellite Handbook by QST Editor Steve Ford, WB8IMY, brings the thrill of satellite communications within your reach. Filled with understandable descriptions and illustrations, this book includes all the tools you need to participate in this exciting field.

This very readable guide was designed to give a broad introduction to the subject of satellite communications, while providing the practical fundamentals you need to explore, track and operate ham radio satellites on your own. Since the pioneering days of satellite communications, ham radio operators have been along for the ride -- building, launching, and operating satellites. You can experience this technology firsthand using today's fleet of Earth-orbiting ham radio satellites.

With chapters authored by satellite expert Martin Davidoff, PhD, K2UBC, this book is sure to be a hit with both new and experienced satellite enthusiasts. Be sure to get your copy of The ARRL Satellite Handbook today!

1658. SKYWARN Recognition Day Set for December 6

Yahoo group: IndyHamRadio
Date: 2008-11-02 23:21:06 UTC
From: Mark Thompson
Topic: 1658 Message: 1658

http://www.arrl.org/news/stories/2008/10/30/10417/?nc=1

SKYWARN Recognition Day Set for December 6

This map shows the NWS offices that are participating in the 2008 SKYWARN Recognition Day.

Each participating NWS office will send out their own QSL card. This card is from the 2007 SKYWARN Recognition Day in Wichita, Kansas.

The 10th Annual SKYWARN Recognition Day (SRD) Special Event will take place Saturday, December 6, 2008. SRD is co-sponsored by the ARRL and the National Weather Service (NWS) as a way to recognize the commitment made by Amateur Radio operators in helping to keep their communities safe. According to SRD Coordinator David Floyd, N5DBZ, Amateur Radio operators can visit their local participating NWS
office http://www.crh.noaa.gov/hamradio/participating_offices.php, working as a team to contact other hams across the world throughout the 24 hour event.

The idea for the first SRD took shape in the summer of 1999. Meteorologist-in-Charge of the Goodland, Kansas NWS office Scott Mentzer, N0QE, tried to find a way to recognize the valuable contributions storm spotters make to the National Weather Service. "Since many of those storm spotters were also hams," Floyd said, "it seemed like a natural fit for the recognition to be centered on Amateur Radio."

With the approval of NWS headquarters and a commitment to participate from many local NWS offices across the country, the first National Weather Service Special Event took place on November 27, 1999. "At the end of the event, an amazing 15,888 QSOs were logged, with contacts made to all 50 states and 63 countries," Floyd recounted. "The Des Moines forecast office took the honor of making the most contacts of any office that first year with 761 QSOs, and went on to lead the pack until 2003 by logging between 1300-1500 contacts each year!"

Floyd said that feedback from that first event was "overwhelmingly positive" from both the NWS staff and the local ham clubs: "Suddenly there was incentive for more NWS staffers to either obtain a license or upgrade so that more people could work ham radio during severe events. In addition, many club members had never visited an NWS office before. When they came for the special event, they learned the value of their reports and how they were used in conjunction with existing technology."

And so began an annual tradition. The following year, 85 of the 122 NWS offices -- almost 70 percent -- participated in the event, making nearly 24,000 QSOs. "Perhaps the most unusual contact occurred in 2000 was with an airliner 39,000 feet above Utah," Floyd said. "The pilot ended the QSO with a request for a 'spot weather forecast' for his arrival at Salt Lake City airport."

In 2001, the name of the event was changed to SKYWARN Recognition Day, a name Floyd said better relayed what the day was all about: "Each year since the inception of SRD, the number of NWS offices and local ham clubs participating has increased, until now more than

100 offices sign up each year to take part. The most contacts made during any SRD occurred in 2006 when -- thanks to the staff and local hams in the Grand Junction, Colorado area -- 1640 QSOs were logged!"

Station call signs have also changed over the years. Floyd said that some NWS offices and clubs apply for a special event call sign, "such as W3B in Brownsville or N0Y in Aberdeen, South Dakota. Other call signs hint at office location, including WX9GRB in Green Bay and WX4NHC at the National Hurricane Center. Still others represent more of the big picture, as in KC0SKY in Pleasant Hill, Missouri."

Floyd said that as SKYWARN Recognition Day has grown throughout the years, he has seen a greater use of digital communications in addition to CW, RTTY and packet radio: "Each year, more and more contacts are being made using EchoLink, Winlink and the use of e-mail reflectors."
2008 SKYWARN Recognition Day will be held on December 6 from 0000 UTC-2400 UTC. Last year, contacts were made in all 50 states and 40 countries during the 24 hour event. If you haven't joined in the fun, make 2008 your year to do so!

1664. Re: SKYWARN Recognition Day Set for December 6

Yahoo group: IndyHamRadio
Date: 2008-11-09 08:20:32 UTC
From: Dan
Topic: 1658 Message: 1664

John,

Kosciusko and Whitley Counties will be handling operations this year
for WX9IWX Northern Indiana. This was just decided recently in the
last few days. A well deserved break for Elkhart County and others
that have helped in the past. All are welcome to come and help out or
give us a call on the air. Event starts at 7 PM EDT on Friday and
ends on Saturday at 7 PM EDT. More specific info to follow.

From: kc9brz
Topic: 1666 Message: 1666

The repeaters programmed into my 2-meter mobile, whilst galumphing*
around Marion County. All of these seem to be reachable from
a car-mounted mobile unit at some point on or within the I-465 Loop.

Comma-delimited for to enjoy import into spreadsheet.

1667. Need Notebook PC to Play DVD at Ft. Wayne Hamfest Forum

Yahoo group: IndyHamRadio
Date: 2008-11-11 02:26:16 UTC
From: Mark Thompson
Topic: 1667 Message: 1667

I am conducting a VHF/UHF Digital Voice forum on Saturday at Noon at the Ft. Wayne hamfest. This year I plan to play an excellent digital voice video on DVD with a discussion afterward.

Unfortunately, my notebook PCs don't have the software to play DVDs so I have asked the hamfest
to provide a PC to play the DVD.

Since I haven't received a confirmation from the hamfest yet regarding availability of a PC to play a DVD I am wondering
if anyone who is attending the hamfest might be able to bring a PC capable of playing a DVD?

If you are able to provide a PC please contact me off-list.

Thanks.

I worked in a shop that was a Sony warranty repair center. We had practically every service manual Sony published. We were constantly joking about "rockup revers" and "blacket blocks" (actual spellings in the manuals).

VHF/UHF Digital Voice Forum at Ft. Wayne Hamfest, Saturday, November 15th @ Noon in the White Room

The forum will feature a Digital Voice Overview Video and a discussion of D-STAR afterward.

You can see a preview of the VHF/UHF Digital Voice Video Overview at:
http://www.arvideonews.com/dv/index.html

D-STAR digital voice & data repeaters are already operating in Indianapolis & Lafayette so this will be a great opportunity to learn more about digital voice & D-STAR technology.

Look foward to seeing you at the forum

73, Mark, WB9QZB

P.S. - If you can't make the forum you can learn more about all the digital voice & data modes by joining the Digital Ham Group at:
 http://groups.yahoo.com/group/illinoisdigitalham/
The group had over 3,000 members world-wide and is the only digital group with dozens of Files & Links covering All the Digtal Voice & Data modes.

1676. IBM Teams up with BPL Provider to Offer Services in Seven States

Yahoo group: IndyHamRadio
Date: 2008-11-13 02:50:51 UTC
From: Mark Thompson
Topic: 1676 Message: 1676

http://www.arrl.org/news/stories/2008/11/12/10449/?nc=1
IBM Teams up with BPL Provider to Offer Services in Seven States
On Wednesday, November 12, IBM announced
http://ap.google.com/article/ALeqM5h34ExZwCNNQ6JAorv-5jiHL3l_TwD94DI2R81 that it has signed a $9.6 million deal with International Broadband Electric Communications (IBEC) http://www.ibec.net/ to install equipment and provide BPL service to almost 350,000 homes in Alabama, Indiana, Maryland, Pennsylvania, Texas, Virginia, and Wisconsin. According to the Associated Press, IBEC Chief Executive Scott Lee said the network, which will be funded by $70 million in low-interest federal loans from the Department of Agriculture, should be in place in about two years. IBEC currently provides broadband to only about 1400 customers, most of them beginning to receive service in the past 18 months.

"IBEC's equipment doesn't use the ham bands," said BPL expert and ARRL Laboratory Manager Ed Hare, W1RFI, "making it less likely that they will have any interference complaints from amateurs. Their equipment, however, does interfere with shortwave broadcast and other spectrum, but in the US, not many users have complained. IBM has been in the BPL business for a few years now, so this venture is nothing new for them." IBEC staff member Brent Zitting, KB4SL, serves as a member of ARRL's EMC Committee.

IBM is the first major systems integrator to enter the market. According to an IBEC press release http://www.ibec.net/pdf/20081112_IBM_and_IBEC_Work_Together.pdf announcing the joint venture, IBM "will provide overall project management, oversight, and training of the line crews who will be installing the BPL equipment." IBEC "will provide the BPL technology and equipment and serve as the Internet Service Provider (ISP) to these rural residents."

A 2006 FCC study reported that fewer than 5000 homes receive their Internet connections via power lines. IBM and IBEC's joint plan, Lee said, will serve residents, of whom about 86 percent have no cable or DSL access, in the seven states.

According to reports, IBEC's strategy is to sign up electric cooperatives that provide power to sparsely populated areas across the eastern United States. Rather than compete toe-to-toe with large, entrenched cable or DSL providers, IBEC is looking for customers that have been largely left out of the move to high-speed Internet.

"Although the BPL industry is making progress on the EMC issues," Hare explained, "this process will not be complete until it supports regulations and industry standards that reflect its successful models. At recent meetings of the IEEE P1775 BPL EMC standards committee -- although utility and radiocommunications stakeholders wanted to include an informative annex on the ways to address BPL interference, as well as a procedure to address complaints -- some in the BPL industry, including the representative from IBEC, blocked moving the EMC standard to IEEE ballot with the annex included. Without effective EMC criteria in this standard, it cannot meet its objectives, and it is not likely that the standard will receive much support from the EMC community."

1677. 2008 NWS/IMO SKYWARN Recognition Day

Yahoo group: IndyHamRadio
Date: 2008-11-13 06:24:53 UTC
From: Dan Dahms
Topic: 1677 Message: 1677

Hoosier Lakes ARC and Whitley County ARC will be sponsoring the event this year. We welcome anyone to join in and always can use the help. There is no operator's schedule so come over when you want. Contact Pat WX9PAT
of NWS - Northern Indiana patrick.murphy@ noaa.gov, Jim N7GVV of HLRC N7GVV@comcast.net or Dan N9WNH of WCARC n9wnh@... for further information.

CQ…CQ…CQ…

National Weather Service Special Event
2008 SKYWARN Recognition Day
December 5, 7 pm EST to December 6, 7 pm EST

SKYWARN Recognition Day was developed in 1999 by the National Weather Service and the American Radio Relay League. It celebrates the contributions that volunteer SKYWARN radio operators make to the National Weather Service. During the day SKYWARN operators visit NWS offices and contact other radio operators across the world.

WX9IWX, National Weather Service Northern Indiana’s amateur radio station, will once again be participating through the entire event. Contact us on 2/10/15/20/40/ 80m via PHONE, CW and PSK-31. Look for around 100 registered offices to participate again this year.

For more information visit the 2008 SKYWARN Recognition Day website at http://hamradio.noaa.gov. At this website, you will find the latest information regarding this event. There is also information on how to receive your event certificate for the stations you’ve contacted and QSL information for WX9IWX and other stations providing QSL’s.

As always, thank you for your commitment to the National Weather Service SKYWARN program.

Operators are needed for WX9IWX at the National Weather Service this year. Please contact Pat Murphy, WX9PAT at patrick.murphy@ noaa.gov for more information. Please help pass the word about this great amateur radio event.

73, Pat

ARRL to Offer Self-Study Course on Digital Technology for Emergency Communications

A sample of what The ARRL Digital Technology for Emergency Communication Course offers.

With digital technology becoming an integral part of Amateur Radio, hams interested in Emergency Communications now have a new tool to help them take advantage of emerging modes such as Packet Radio APRS, Winlink 2000, IRLP, EchoLink and WIRES-II, D-STAR, APCO25, HF sound card modes and Automatic Link Establishment (ALE). The ARRL Digital Technology for Emergency Communications Course http://www.arrl.org/catalog/?item=1247 will introduce hams to all of the ways Amateur Radio operators are using digital technology as a valuable emergency communications tool.
Written by ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, this self-study CD-ROM will answer such questions as:

* Can you transfer supply lists or personnel assignments between emergency operations sites?

* Can you get critical e-mails to the Internet if a connection goes down?

* Can you relay digital images of damage at specific locations?

* Can you track the locations of emergency personnel and display them on computer maps?

* …and more!

Illustrations, screenshots, Internet links and audio files are used to demonstrate transmission modes and equipment configurations. Bite-sized learning units and interactive knowledge checks make learning interesting and fun!

"This course is a great starting point for anyone interested in the public service applications of digital communications technology," said Ford. The ARRL Digital Technology for Emergency Communications Course is available from the ARRL for only $49.95.

Minimum System Requirements for CD-ROM -- Microsoft Windows Vista/XP/2000/NT/98/95 or Apple OS X; 200 MHz processor; 32 MB RAM; sound card and speakers; 4-speed CD-ROM drive or higher. Requires Web browser -- Microsoft Internet Explorer 6.0, Mozilla Firefox 2.0, Apple Safari 3.0 or later versions. Some documents require Adobe Reader.

1683. Defending the Future of Amateur Radio...NOW

Subject: Defending the Future of Amateur Radio...NOW

ARRL 2009 Spectrum Defense Fund
"QUICK" DONATE NOW: www.arrl.org/defense

_____

November 2008
Dear ARRL Member, ARRL

Recently ARRL CEO Dave Sumner, K1ZZ asked for your support of the vital Spectrum Defense Fund at ARRL. If you have already responded, thank you. If not, here are some of the key reasons why your contribution is so important this year.

As you know, defending and enhancing amateurs' access to the radio spectrum is one of the most important missions of the ARRL.Together we have enjoyed many successes over the years. But despite exponential growth in the variety and number of radio frequency devices in the hands of consumers and businesses, we have managed to protect our bands and to add several new ones.
* Next March we will celebrate the full implementation of one of our greatest victories: the removal of high-powered international broadcasting stations from the heart of the 40-meter band–doubling the size of the worldwide 40-meter band and making this popular band more useful than it's been in 70 years!
* In 2007 the Amateur Radio Service earned its first low-frequency (LF) allocation, 135.7-137.8 kHz. However, here in the United States we must petition the FCC to implement the allocation.
* Our battle to give the Broadband of Power Lines problem the attention it deserves has been going on for six years. Last year the ARRL went to court to challenge the FCC. Guess what – we won! On April 25 the United States Court of Appeals for the District of Columbia Circuit confirmed what the ARRL has been saying for years about how the FCC was handling the BPL interference issue: FCC prejudice tainted the rulemaking process. Andin July the Court went one step further, ordering the FCC to pay the ARRL more than $6,000 toward our costs in pursuing the appeal (the check arrived in September). The award affirmed that the ARRL substantially prevailed in its appeal. The Court's decision was a tremendous victory for radio amateurs and other licensed users of the radio spectrum.
It is only through the support of thousands of ARRL members and friends like you that we have managed to come this far. Together we can celebrate all that we have accomplished on the BPL front over the past six years!

But there is more work to do. BPL is still a challenge as we face another round of technical arguments. We must leave no room for these technical issues to be settled on anything other than technical grounds. There's more work to do!

And another WRC(World Radiocommunication Conference) lies ahead in 2011 – and preparations are already underway. Planning for WRC-11 has begun and there are important issues for Amateur Radio.

ARRL staff and volunteers are hard at work on your behalf, teaming up with International Amateur Radio Union (IARU) volunteers from around the globe to build the strongest possible case for Amateur Radio at WRC-11.

Your financial commitment to spectrum defense is vital to our ability to protect your access to radio spectrum. Your contribution of $100, $50 or $25 to the 2009 Spectrum Defense Fund now will provide the financial resources required for us to be vigilant and represent you as we face new challenges.

Sincere 73,

Mary Hobart, K1MMH
Chief Development Officer
P.S. Because you care about Amateur Radio, I hope you'll make the most generous contribution you can before November 30! Remember that your donation by mail, phone on or the web at www.arrl.org/defense is tax deductible to the extent allowed by law.

P.P.S. Recently the charitable giving provision of the Pension Protection Act of 2006 was renewed for 2008 and 2009. If you are age 70-1/2 this year you may contribute up to $100,000 directly to ARRL from your IRA or Roth IRA and may benefit from tax advantages. Your contribution can be directed to the Spectrum Defense Fund. As always, check with your financial and legal advisors to determine how you might benefit from this renewed opportunity. Thank you!

The national association for AMATEUR RADIO
225 Main Street, Newington, CT06111-1494USA

1684. New Section Manager - John Poindexter W3ML

Yahoo group: IndyHamRadio
Date: 2008-11-19 16:07:53 UTC
From: Brian Murrey
Topic: 1684 Message: 1684

Section Manager Election Results Announced

Indiana will have a new Section Manager starting in January, since incumbent Section Manager Jim Sellers, K9ZBM, of Middlebury, decided not to run for another term. Sellers has served as Section Manager since July 2002. Raymond Andrews, K9DUR, of West Terre Haute, and John Poindexter, W3ML, of Knox, were candidates for the open seat. Andrews received 531 votes and Poindexter received 261 votes.

After ballots had already been mailed out to ARRL members in the Indiana Section, Andrews wrote to ARRL Headquarters withdrawing his candidacy due to health concerns. As such, the Section Manager's position for the new term starting in January was considered vacant because Andrews won the majority of votes.

According to the Rules and Regulations of the Field Organization, vacancies in the office of Section Manager shall be filled by appointment by the ARRL Membership and Volunteer Programs Manager, in consultation with the respective Section's Director. After ARRL MVP Manager Dave Patton, NN1N, consulted with ARRL Central Division Director Dick Isely, W9GIG, John Poindexter, W3ML, has been appointed Indiana Section Manager with a term to begin January 1, 2009. Poindexter's term of office will be for 18 months -- instead of two years -- because this new term of office in Indiana had to be resolicited.

Poindexter has been a radio amateur since 1979 and has held appointments as an Assistant Emergency Coordinator, past president of the Wabash Valley Amateur Radio Club, and president of the Starke County Amateur Radio Club. He is active in public service communications, DXing and contesting.

1685. ARRL to Offer Self-Study Course on Digital Technology for Emergency Communications

1686. Bulletin Stations Needed

Yahoo group: IndyHamRadio
Date: 2008-11-23 04:02:43 UTC
From: KB9BVN
Topic: 1686 Message: 1686

Are you a member of the ARRL? Have you ever considered helping your state section in the official capacity of "Official Bulletin Station"?

The Indiana Section of the ARRL is looking for some hams to act as OBS on local VHF nets, Packet Nets, etc. You can read more about the position on the ARRL website.

http://www.arrl.org/FandES/field/org/obs.html

To serve the greatest possible "audience," OBS appointees who can send ARRL bulletins over vhf repeaters, and via uploading to packet bulletin board systems (PBBS) are of maximum usefulness and are much in demand. If possible, an OBS who can copy bulletins directly from W1AW (or the Bulletin Manager) should be assigned to each major repeater in the section. Bulletins should be transmitted regularly, perhaps in conjunction with a vhf repeater net, on a repeater "bulletin board" (tone-accessed recorded announcements for repeater club members), or via a RTTY or packet (computer) mailbox, if one is functioning locally. Duties and requirements of the OBS include the following:

1. OBS candidates must have a Novice class license or higher.

2. Retransmission of ARRL bulletins must be made at least once per week to maintain appointment.

3. OBS candidates are appointed by the Section Manager (or by the Bulletin Manager, if the SM so desires) and must adhere to a schedule that is mutually agreeable.

4. OBS appointees should send a monthly activity report (such as FSD-210 under "Schedules and Net Affiliations") to the Bulletin Manager, indicating bulletin transmissions made and generally updating the Bulletin Manager to any OBS-related activities. This reporting arrangement may be modified by the Bulletin Manager as he/she sees fit.

As directed by the Bulletin Manager, OBSs will include in their bulletin transmissions news of local, section and regional interest.

If you are interested in becoming an OBS, and you are a member of the ARRL...please email me with your contact information.

Brian Murrey - KB9BVN

1691. Notice to all Indiana ARRL Appointees

Yahoo group: IndyHamRadio
Date: 2008-11-29 04:42:00 UTC
From: John Poindexter
Topic: 1691 Message: 1691

November 28, 2008

Hello Fellow Hams,

I have been informed by other Section Managers that when a new SM goes into office he should do a complete update of the section appointees. I asked ARRL HQ about this and they informed me that this is a common occurrence as the appointees serve at the pleasure of the Section Manager. It also cleans up the list of those that have moved, became a SK or gave up their appointment and was never removed from the list.

Therefore, I am notifying everyone that all ARRL Indiana Section appointments will expire on Dec 31, 2008 at the end of Jim Sellers, K9ZBM's term.

I invite those that are interested in reapplying for their present appointment to contact us to discuss their job and accomplishments, as well as their plans for the future. PLEASE contact us by email, telephone (my preferred method), or by postal mail.

PLEASE apply for reappointment if you are interested. I will need to provide the ARRL with up-to-date information as to who is actually active in their respective ARRL field service programs, and provide the ARRL with a comprehensive list of appointees. Also please read and agree to the responsibilities for the position on the ARRL website prior to asking or accepting a position. An added requirement for the state of Indiana is that you will send in a monthly report showing what you have accomplished for that month. You will also need to establish the email alias of your call @ arrl.net, if you do have email.

Be aware that not all individuals will be reappointed. There is no longer a position called Official Bulletin Station. They were eliminated by the ARRL Board of Directors and therefore, will not be reappointed.

If you wish to be reassigned, or are new and would like to be assigned, please contact the Indiana Staff member below or me, W3ML, to discuss your qualifications and the information highlighted above. Just remember, if you are offered an appointment, you are required to report monthly to the Staff member in charge of your position, failure to do so will lead to termination. Deadline for reappointment is January 31, 2009.

For a position contact the individual listed under the title:

Net Managers and Official Relay Stations contact:

Jim Baughn, K9EOH, Section Traffic Manager at k9eoh@...
Telephone: Home (812) 828-0629, Cell (317) 373-5193
Address: 4300 Lennox Road, Poland IN 47868

District Emergency Coordinator, Emergency Coordinator, Official Emergency Station contact:

Tony Langer, W9AL, Section Emergency Coordinator at w9al@... or indianasec@...
Telephone: Home (574) 896-3510 or Cell (574) 249-8050
Address: 8530 S 100E, North Judson, Indiana 46366-8458

Public Information Officer contact:

Linda Harshbarger, KC9GCH, Public Information Coordinator at kc9gch@...
Telephone: (317) 274-7677, or (317) 887-2558
Address: 1768 Farm Meadow Dr., Greenwood, IN 46143-7751

Official Observer contact:

Contact John Poindexter, W3ML

Local Government Liaison contact:

David Spoelstra, N9KT at n9kt@arrl.net Please email, as this is the only way to reach David at the moment.
Telephone: N/A
Address: 3630 E 71st St., Indianapolis, IN 46220-3716

Technical Specialist contact:

James P. Osburn, WD9EYB
Telephone: (812) 238-0584
Address: 2303 Hulman St., Terre Haute, IN 47803

Again, if you are interested in one, or have questions contact me or the appropriate staff person.

I am looking at the Section being very Active.

Thank you for your attention and your interest in participating in the IN ARRL field service!

John, is this a recent ARRL Board action?

Just a week ago, KB9BVN, the Indiana Section Bulletin Manager, put out a call for additional OBS's. Also, the OBS position description still appears on the ARRL web site (http://www.arrl.org/FandES/field/org/obs.html).

Bob

The OBS position was eliminated at an ARRL Board Meeting in 2003...and I just found that out a couple days after I sent the solicitation for new OBS stations. Sorry for the confusion, but there will not be any OBS positions.

Also the Bulletin Manager job was eliminated at the same time, existing Bulletin Managers are permitted to keep their position in the organization until they want to retire it, or the Section Manager decides to terminate the position. Our new SM, John Poindexter W3ML, has asked me to stay on as Bulletin Manager for now.

Bob,

Well, it seems that David and Brian beat me to the punch on this one.

I, too, just found out the other day that these positions were eliminated. I am finding out new stuff every day since taking this position and getting filled in on all the aspects before I take office in January.

I welcome questions and comments at anytime, except in the middle of the night. hi hi.

1696. Bulletin Manager and Official Bulletin Stations was: Notice to all Indiana ARRL Appointees

Yahoo group: IndyHamRadio
Date: 2008-11-29 20:06:13 UTC
From: Bob Burns W9RXR
Topic: 1691 Message: 1696

At 02:16 PM 11/29/2008, John Poindexter wrote:

Just because I send emails in the middle of the night, or the wee hours of the morning as in this case, doesn't mean you have to answer them then. <grin>

Kinda surprised they eliminated the BM and OBS positions. I've read the motion (thanks, David) a couple of times and here are my take-aways:

1. Members are getting information from the ARRL via means other than radio.

2. The BMs and OBSs were the people responsible for distributing this information.

3. Some SMs were no longer supporting the positions.

4. So, the ARRL Board eliminated the positions.

I think they took a narrow view of the issue. Yes, the role of BMs and OBSs to distribute information via radio may have diminished. But that wouldn't seem to eliminate the need to distribute the information. KB9BVN does an admirable job getting information distributed via various on-line forums and I think that serves a purpose even if isn't radio. Not every amateur radio operator in the U.S. is an ARRL member, so not everybody can get bulletins directly from the ARRL like members can. Also, shocking as it may be, not every ARRL member is on the Internet. If for no other reason than spreading the word about the ARRL, it would seem wise to retain section BMs.

John and Brian, thanks for keeping the BM position alive in the Indiana Section.

I can remember the days when N9IKL used to read ARRL and Indiana Section bulletins during the 146.700 Indianapolis repeater net on Wednesday nights. I always thought that was an important function of a weekly net. Times have changed. <sigh>

Bob-

I agree with most all you said. My take on it is that as more info shifted to the Internet, the league saw the PIC and PIOs taking over to disburse information. That structure also aligns itself well with all the EMCOMM structures where all information comes out of the PIO. I think the league saw the BM and OBSes as a radio only outlet, and they saw the PIC and PIOs as doing all media - print, radio, and video so there was a natural progression to eliminate the radio only positions. That's just my guess - not any kind of official position.

-David, N9KT

Northeast Indiana Packet Net
Wednesday December 3, 2008
8:00 pm - 8:30 pm
(This event repeats every week.)

Location: Northeast Indiana

This is an informal net that is held every Wednesday at 8PM on 145.530 @ 1200 baud. We use unconnected converse mode to communicate for a roundtable net setting. Use your "UNPROTO" command or equivalent to set Digi path(s) through the strongest station(s) needed between you and your destination. Only use those that are necessary! Have all your "Monitor" settings on so you can see everyone.

We are utilizing the capabilities of the KA9LCF BBS on 145.050 20W@115' and KA9LCF-6 Node in Auburn on 145.530 is 40W@300'. The remaining primary stations are all on 145.530. In Allen County there is the ACARTS Node W9INX-1, Whitley Co. EOC/RACES Digi KC9ANF-8 is 50W@140', Elkhart County N9BAV-7 Node at Goshen @ GARC at 85', Wabash County ARC KB9LDZ-8 Digi 40W@120' and at the Miami County EOC KF9NU-8 Digi 40W@150'. Others will come on line soon.

If you need further information contact:

1701. ARRL/TAPR DCC Reviewed in Fall CQ VHF Magazine

Yahoo group: IndyHamRadio
Date: 2008-12-05 23:40:18 UTC
From: Mark Thompson
Topic: 1701 Message: 1701
Attachments: 2 described; binary payloads are missing from this source WARC

The Line of Sight (Message from the Editor) Column on page 4 of the Fall 2008 edition of CQ VHF magazine reviews the recent ARRL/TAPR DCC (Digital Communications Conference) in Chicago.

CQ VHF Editor, Joe Lynch, N6CL recognized TAPR President, Dave, VE3GYQ and TAPR Vice President, Steve, N7HPR for their leadership & the success of the DCC.

Kermit, W9XA & Mark, WB9QZB were recognized as local co-hosts of the ARRL/TAPR DCC coordinating local logistics & publicity.

Ron, K9IKZ was recognized for the fantastic A/V equipment deployed at the DCC as well as at the W9DXCC conference the prior weekend.

Gary Pearce, KN4AQ of Amateur Radio Video News and a former Chicago area native recorded the entire DCC and plans to make available a set of DVDs of the presentations. Although not mentioned in the column, Greg, N9CHA assisted Gary as a cameraman recording the presentations.

Due to the success of this year's DCC it is returning to Chicago again next year, 2009. A factor in this decision was the A/V eqiupment supplied by Ron.

You can learn more about CQ VHF at http://www.cq-vhf.com/

You can learn more about the DCC at http://www.tapr.org/dcc.html

Look foward to seeing many of you at the DCC in 2009.

1707. FCC - ARRL request

Yahoo group: IndyHamRadio
Date: 2008-12-08 01:57:40 UTC
From: John Poindexter
Topic: 1707 Message: 1707

Details:

The clubs and members of the ARRL have been asked by the FCC to aid in education efforts regarding the transition to digital television broadcasting and information on installing converters where they are needed.
The leaders of the clubs in Indiana need think about ways you could best present information helpful to others in your community. Each community is a little different, so your plans may vary.
We need a list of groups willing to help out in some way during the period from early January to February 17 (or a little later for procrastinators).
Beginning early January, FCC staff will use the volunteer contact list information provided by the SMs to contact leaders of these volunteering clubs. FCC staff will then make contact with them, learn their plans, and provide them with media, brochures or other materials your groups may need in this effort. They may even come and visit with larger groups to aid in implementation of the group's plans.
"I really appreciate the willingness of the ARRL to actively participate in helping Americans with the transition to DTV and your helpful suggestions. The DTV transition will be an historic moment in the evolution of TV. Broadcast television stations can offer viewers improved picture and sound quality and new programming choices.
All-digital broadcasting also will allow us to significantly improve public safety communications and will usher in a new era of advanced wireless services such as the widespread deployment of wireless broadband.
As we discussed, our goal is to engage on a cooperative basis the amateur community to help with the DTV outreach and educate consumers on how to install a converter box and how to set it up. We also discussed the possibility of amateur groups providing technical advice by telephone to consumers who may encounter difficulty with the installation and setting up of their converter box. Any assistance that you can arrange through the ARRL Section Managers will greatly help in the efforts of the FCC to ensure a smooth transition to DTV on February 17, 2009."
- George Dillon, FCC

The FCC will provide participating groups with news releases, audio clips (mp3 files) and announcement templates for them to use in local media in preparation of the activities. FCC will also provide clubs with video, PowerPoint and similar visual materials about how to accomplish conversion installation.

Concerns & Ideas:
1. At no time should the hams enter someone else's home in this; nor should they broker or sell conversion boxes in any way.

2. Clubs can be encouraged to provide such things as call in phone help numbers for tech help, make presentations at meetings, demos at malls, talks to other groups ☐ what works in their locations.

3. Merchants will be able to get additional publicity and might even let action take place at a store known to the community, and tag on the ability to sell converters to people who don't yet have one.

4. Local over-the-air broadcasters should be the most interested people in this activity, making it easier to get TV publicity about it.

5. There is not enough time left for QST, the national magazine. But there is precedent of getting the word out quickly to recruit clubs for a special need using only news and PR functions.

6. There is no budget to cover Amateurs' expenses.

7. The task is to provide technical information and aid. We are not being asked to be installers. The FCC staff will provide us with information and materials.

8. Other NGOs are also being asked to help out in different ways.

1708. IN-ARRL BULLETIN 17

Yahoo group: IndyHamRadio
Date: 2008-12-09 01:24:01 UTC
From: KB9BVN
Topic: 1708 Message: 1708

IN-ARRL BULLETIN 17
8 DEC 2008 - 1900 EST

FROM CENTRA.L DIVISION HQ

There has been some discussion within the ARRL board about hams getting involved in the DTV conversion box installation process. On the surface, it looks like a great opportunity to provide a needed public service. However, a similar situation arose several decades ago, when hams were urged by the FCC to help with amateur radio TVI issues in the 50s by installing high-pass filters on TV antenna feed lines.

Most of the early TVs did not have long-term trouble-free operation. Tubes would age and die, 300 ohm twin lead feed line would get brittle and fail, etc. Many times, the TV would fail shortly after a ham had helped out and the ham was blamed for the failure. It became a mini-epidemic in the 50s.

In today's litigious society, somebody else is always at fault. It's never the owner of the equipment, or the user of the service. I suggest that hams only make suggestions, or maybe provide some "show and tell" in public venues.
But they should NEVER perform actual DTV converter box hook-up services. To do so, is to invite serious liability issues when something totally unrelated to
the installation of a DTV conversion box causes loss of the signal or even TV
failure. It's happened in the past and it will happen this time around.

As someone who has worked on computers, doing hardware and
software installs/upgrades for a living, I can say AMEN to that!

"He who touched it last, gets the blame."

"Work on it once, and you're 'married' to it."

"Do something for free, and they'll expect free service forever."

IN-ARRL Bulletin 17
12/13/08 13:30PM EST

From IN-ARRL HQ

TV Converter Program

I am recommending that Indiana Clubs consider doing what
was suggested by Don wood, NM Section Manager:

"What I am recommending to all our clubs is that they get
with their TV stations and have a "call in" session
multiple times during January.

The TV stations are equipped to handle the calls and it
can be used as PSA time. Here in Albuquerque one of the
stations has done this with lawyers - why not with the
hams and the clubs. It is good PR.

By going with the TV stations we don't have to use our
own phone numbers, postage or inordinate man hours to
accomplish the task. After all it is the TV viewers
that will be addressed."

Indiana clubs that have TV stations in their city or
county should really consider doing this as a Public
Service and obtain the great PR benefit.

Remember, Indiana's motto for 2009 is "We are Active"

1714. Tri County HF Society

Yahoo group: IndyHamRadio
Date: 2008-12-14 01:25:48 UTC
From: KB9BVN
Topic: 1714 Message: 1714

Is there anyone here from the Tri County HF Society?

I need an email address for your club. If you can help, please reply.

The address of KK9TC@... does not seem to be working anymore.

IN-ARRL BULLETIN 18
12/14/08 07:50AM EST

FROM INARRL HQ

We are beginning the updates to the INARRL.org web
pages and I am looking for information that you may have.

The Amateur Radio Class page needs to be updated as
the last class listed there was during 2007.

If you are planning on running classes in 2009,
please send me the dates and types of classes you
have planned.

Another area is Workshops. Again, if you are planning
to present any Amateur Radio Workshops in 2009, please
send that information to me as well.

Club email and web site addresses. We need those updated
as well, so hopefully new hams can locate your club.

My email is w3ml@...

IN-ARRL BULLETIN 19
12/14/08 14:25 EST

From IN-ARRL

I'm Jim Osburn, WD9EYB, and I will be the new Technical Coordinator
for the Indiana Section of the ARRL and I'm looking for ARRL
members to appoint as Technical Specialists (TS).

Here is a link that describes the Technical Specialist appointment.
http://www.arrl.org/FandES/field/org/ts.html

John Poindexter, W3ML, the incoming section manager has said that
the motto of the Indiana section is "We're active". That will apply to
the TS appointees. As a TS you will be required to seek ways in
which to be active and to report your activity monthly as a minimum.

Many of you already essentially do the job of a TS. I encourage you
to apply to make it official.

To apply for appointment as a TS visit this web page, fill out the form,
and click the send button.

http://www.wirelessinfield.com/tswebapp

That will create an email that you will then use your email program to send.

If you have any questions contact me at wd9eyb@...
or call (812) 238-0584. I'm away from the phone a lot so email
is preferred. If you get my voice mail just leave a message.

Thanks,

Jim Osburn, WD9EYB

Official ARRL Field Organization Appointment Description: Technical
Specialist

For a section team to be effective in one of the most important arenas in
Amateur Radio, technology, there must be a cadre of qualified, competent
Technical Specialists (TSs). "Advancement of the radio art" is a profound
obligation we incur under the rules of the FCC. TSs help meet this
obligation.

Appointment by the SM, or TC under delegated authority from the SM, the TS
supports the TC in two main areas of responsibility: Radio Frequency
Interference, and Technical Information. TSs can specialize in certain
specific technical areas, or can be generalists. Here is a list of specific

job duties:

1. Serve as a technical advisor to local hams and clubs. Correspond by telephone and letter on tech topics. Refer correspondents to other sources if specific topic is outside TS's knowledge.

2. Serve as advisor in radio frequency interference issues. RFI can drive a wedge in neighbor and city relations. It will be the TS with a cool head who will resolve problems. Local hams will come to you for guidance in dealing with interference problems.

3. Speak at local clubs on popular tech topics. Let local clubs know you're available and willing.

4. Represent ARRL at technical symposiums in industry; serve on CATV advisory committees; advise municipal governments on technical matters.

5. Work with other ARRL officials and appointees when called upon for technical advice, especially in emergency communications situations where technical prowess can mean the difference in getting a communications system up and running, the difference between life and death.

6. Handle other miscellaneous technically-related tasks assigned by the Technical Coordinator.

Recruitment of new hams and League members is an integral part of the job of every League appointee. Appointees should take advantage of every opportunity to recruit a new ham or member to foster growth of Field Organization programs, and our abilities to serve the public.

Technical Specialists must hold Novice or higher class license; ARRL membership required.

1717. Fwd: ARLS009 ARISS Finalizes Plans for Silver Anniversary of Amateur Radio from Space

Yahoo group: IndyHamRadio
Date: 2008-12-19 03:06:00 UTC
From: Mark Thompson
Topic: 1717 Message: 1717

SB SPACE @ ARL $ARLS009
ARLS009 ARISS Finalizes Plans for Silver Anniversary of Amateur Radio from Space

ZCZC AS09
QST de W1AW
Space Bulletin 009 ARLS009
From ARRL Headquarters
Newington, CT December 18, 2008
To all radio amateurs

SB SPACE ARL ARLS009
ARLS009 ARISS Finalizes Plans for Silver Anniversary of Amateur Radio from Space

The Amateur Radio on the International Space Station (ARISS) team is currently celebrating the silver anniversary -- 25 years -- of Amateur Radio operations from space. According to ARISS International Chairman Frank Bauer, KA3HDO, the crew on the International Space Station (ISS) has configured the radio to support cross-band repeater operations. They have also supported some SSTV downlinks and participated in a special test of 9600 baud packet radio operations on the simplex frequency of 145.825 MHz. After December 19, Bauer said he expects the ISS ham radio system to be on the 145.825 MHz frequency supporting 1200 baud packet. If PCSAT is configured during the week, he said double hop APRS is possible.

"During the week of December 21-26, we plan to support the cross-band repeater mode with a twist," Bauer said. "Our intent is to configure the radio for 145.99 MHz uplink -- including CTCSS tone of 67.0 and 437.80 MHz down. This will be performed in low power mode. We should also note that an extra-vehicular activity (EVA) is planned for that week -- Expedition 18 Commander Mike Fincke, KE5AIT, and Flight Engineer Yury Lonchakov, RA3DT, plan to perform a spacewalk on December 22. As per standard procedure, the ISS ham radio system will be turned off for the EVA."

Bauer said that from December 28-January 3, the cross-band repeater will be reconfigured for what he called "a special experiment. This will be a test of our L-Band uplink capability, which, to date, has not been proven out. Plan for an uplink of 1269.65 MHz and a downlink on the standard frequency of 145.80 MHz, using low power," he said. "Given the substantial cable losses of the L-band system, we hope some 'big guns' are able to penetrate through, keep up with

Doppler and make the connection."

A special certificate is being developed for those who communicate with the ISS from November 30, 2008 to January 15, 2009. This certificate will be awarded to those who have had two-way communications with the ISS on voice, packet (APRS) or through the voice repeater. Those who hear the ISS from space in any of the ARISS operations modes -- voice, SSTV, school contact, voice repeater or digital - will also be eligible to receive a certificate.

To receive the certificate, Bauer said to note the ARISS mode of operation (such as SSTV, voice or school) on your QSL and whether the contact was one-way (receive only) or two-way. "You should send your self-addressed, stamped envelope to the normal ARISS QSL volunteer distributor in your area of the world," he explained. "On the outside of the QSL envelope, please include the words '25th Anniversary Certificate.' Make sure your envelope is big enough to accept an 8.5 x 11 inch certificate and includes the proper postage."

If you do not know where to send your QSL, check the ARISS Web site to find the one that serves your part of the world.

"We will be sending your certificate to the volunteer distributors in bulk after the event is over," Bauer said. "This saves workload and money. So do not expect to see it until 1-2 months after the event closes on January 15." Bauer reminded hams that due to ISS flight requirements related to spacewalks and vehicle activity, the radio onboard the ISS may be off for some portion of this schedule. School contacts and general QSO opportunities by the crew will also preempt this schedule for short periods of time. "But remember that if you hear these," he said, "you still qualify for a commemorative certificate. Enjoy the ARISS ops on ISS!"

IN-ARRL BULLETIN 20
12/18/08 22:54 EST

FROM IN-ARRL HQ

We are looking for individuals who may be interested
in an ARRL position. We have a need for an ITN Net
Manager to handle the Indiana Traffic Net. This is the
sideband net.

Also, we are looking for a Net Control Station to
take over the position that John Wallace AB9AA's
has held for over 40 years on the ITN.

John would like to retire from the position.

I, W3ML, would like to personally thank John for
the service he has provided to Indiana and the
National Traffic System.

If you are interested in either or both positions
please contact Jim Baughn, K9EOH at k9eoh@...

1719. D-STAR Workshop, Lafayette, JAN 10

Yahoo group: IndyHamRadio
Date: 2008-12-20 21:22:02 UTC
From: WR9A
Topic: 1719 Message: 1719

Hello fellow Indiana D-STAR users!

We are planning on conducting a D-STAR workshop on Saturday, January 10, from 9:00 a.m. to noon. I know we have several users in the area, and I hope I managed to get this email sent to everyone that may be interested.

With any new and capable technology comes a learning curve, and D-STAR is certainly no exception! And since changes are still happening in the D-STAR world on a weekly basis (daily, sometimes) it is a challenge to keep up with it all.

While we certainly don't have ALL the answers, we do hope to answer a lot of questions, help you learn a bit more about the technology, and introduce you to some of the more advanced D-STAR applications! Don't be overwhelmed by D-STAR and its seemingly complex nature; it's a learning experience for us all.

The first hour of the workshop will cover the basics of D-STAR, such as digital callsign routing, radio programming, and features of Gateways and the G2 network. The remainder of the session will introduce D-STAR users to some of the more advanced features, like DV data (D-Chat, d-Rats, etc.), system linking, reflectors, DV-Dongle, D-STAR HotSpot, the gmsk decoder, and other emerging applications.

IMPORTANT:

Anyone interested in attending MUST BE REGISTERED at LEAST 48 hours in advance of the workshop, preferably much sooner. Registration to attend is REQUIRED, as we must give your name to SIA security at the main gate in order to allow you access to the Training Center. Please contact WR9A (wr9a@...) for further information and to register for this D-STAR workshop.

DATE & LOCATION:

The D-STAR workshop is scheduled for Saturday morning, January 10, from 9:00 a.m. to 12:00 p.m. It is being held near Lafayette, Indiana, at the Subaru of Indiana Automotive (SIA) plant at 5500 SR 38 E near I-65. The workshop will be located in Room C of the SIA Training & Reception Center. It's the newer looking building out in front of the SIA factory on SR 38 E, just west of I-65. Here's a link to the location on Google maps:

http://maps.google.com/maps?f=q
<http://maps.google.com/maps?f=q&hl=en&geocode=&q=5054+SR+38+E,+Lafayette&sll=40.374536,-86.798129&sspn=0.009677,0.019248&ie=UTF8&ll=40.373228,-86.798515&spn=0.154842,0.307961&z=12>
&hl=en&geocode=&q=5054+SR+38+E,+Lafayette&sll=40.374536,-86.798129&sspn=0.009677,0.019248&ie=UTF8&ll=40.373228,-86.798515&spn=0.154842,0.307961&z=12

You must enter through the main gate and stop at the guard shack. Security should have your name on a list to allow you entrance to the Training and Reception Center. Once you are given a pass and allowed to proceed, turn right at the first opportunity. Keep going straight through the first parking area and around to the front of the Training & Reception Center. There is a parking lot right out in front of it and you should find a spot there, allowing easy access to the front doors of the Reception Center. I've included an aerial photo of the area so you can see how it is laid out.

If for some reason security cannot find your name on the list, you will need to be able to identify yourself as a visitor for the Ham Radio Meeting in the Training and Reception Center. Security may or may not allow you in based on that information. If you are having no luck getting past the gate, give me a ring at 474-7405. Special thanks to WA9DDI for making the arrangements to use the facilities there, and to Subaru of Indiana Automotive (SIA) as our gracious host.

Workshop size will be limited to about 35 people. Reserve your spot as soon as possible! I look forward to seeing you there. 73

1721. Fw: [RTTY] RTTY WELCOME DAY - 01 JANUARY 2009

Yahoo group: IndyHamRadio
Date: 2008-12-24 17:43:44 UTC
From: W9FG
Topic: 1721 Message: 1721

Come one, come all to:

RTTY WELCOME DAY
01 JANUARY 2009
ALL DAY LONG

Now is your chance to meet and greet other RTTY operators from all over the world.

No hours, No rules, No score, No pressure, No quota, No log needed.

Any band*, Any contact, Any time, Any power, Any equipment, Any antenna.

Get that antique set-up running or fire-up that brand new rig. Use any modem or computer or combination thereof.

Meet and greet others without time limits. Have a short exchange or a rag-chew - whatever suits you.

Participation is voluntary. No log necessary. No awards - just satisfaction. Help others find joy in RTTY by operating for the first time, or the thousandth time.

Get your set-up running smoothly and help others to reverse inversion. Just get on the air to say "howdy" -or- "hello" -or-"WELCOME TO RTTY"

(*) = Authorized amateur radio sub-bands, of course.

PLEASE HELP SPREAD THE NEWS. TELL YOUR FRIENDS AND NEIGHBORS.

"I'LL SEE YOU ON THE AIR FOR:"

RTTY WELCOME DAY
01 JANUARY 2009
ALL DAY LONG

1726. ARRL Emergency Communications Level I (EC-001) Training Classes & Exam

Yahoo group: IndyHamRadio
Date: 2008-12-29 16:24:43 UTC
From: WR9A
Topic: 1726 Message: 1726

Tippecanoe County ARES (Lafayette, IN) will be conducting local training classes for the ARRL's Emergency Communications Level I (EC-001) course in January. The classes will be held in three, 3-hour sessions, beginning on January 17. The three classes will be conducted 3 weeks in a row, on Saturday mornings, from 9:00 a.m. ☐ 12:00 p.m. EST, with the EC-001 exam scheduled at the end of the final session at 11:00 a.m. on January 31. All amateurs are invited and welcome. Being a member of ARES is not a requirement.

ADVANCED REGISTRATION IS REQUIRED TO ATTEND THIS COURSE.

Those interested in taking the course should plan to attend all 3 sessions:

Saturday, January 17 9:00 a.m. ☐ Noon
Saturday, January 24 9:00 a.m. ☐ Noon
Saturday, January 31 9:00 a.m. ☐ 11:00 a.m., EC-001 Exam 11:00 a.m. ☐ Noon

The EC-001 course, Introduction to Amateur Radio Emergency Communications, is a basic course to raise awareness and provide additional knowledge and tools for any emergency communications volunteer. This course has 23 lesson units and is a prerequisite to Level II, EC-002 and Level III, EC-003, Amateur Radio Emergency Communications courses.

There is no cost to attend the training sessions, although if you wish to take the exam for EC-001, the cost will be the standard ARRL exam fee of $15.00. By taking and successfully passing the exam, you will receive a certificate from the ARRL, and be registered as having successfully completed their EC-001 course. (The online EC-001 course cost is $45 for ARRL members, $75 for non-members, so this is a considerable cost savings.)

LOCATION:
The training sessions will be held in room C of the Subaru of Indiana Automotive (SIA) Training & Reception Center. It's the newer looking building out in front of the Subaru of Indiana Automotive plant on SR 38 E, just west of I-65. Here's a link to the location on Google maps:

http://maps.google.com/maps?f=q&hl=en&geocode=&q=5054+SR+38+E,+Lafayette&sll=40.374536,-86.798129&sspn=0.009677,0.019248&ie=UTF8&ll=40.373228,-86.798515&spn=0.154842,0.307961&z=12

or http://tinyurl.com/EC001atSIA

You must enter through the main gate and stop at the guard shack. Security should have your name on a list to allow you entrance to the Training and

Reception Center. Once you are given a pass and allowed to proceed, turn right at the first opportunity. Keep going straight through that parking lot and around to the front of the Training & Reception Center. There is a parking lot right out in front of it and you should find a spot there, allowing easy access to the front doors of the Reception Center. If for some reason security cannot find your name on the list, you will need to be able to identify yourself as a visitor for the ham radio ARES Meeting in the Training and Reception Center.

IMPORTANT:
All participants MUST be pre-registered at LEAST 48 hours in advance of the first class, preferably much sooner. Please contact WR9A (wr9a@...) or N9GKE (n9gke@...) for further information and to register for this EC-001 class.

Class will start promptly at 9:00 a.m. Please bring a notepad and writing instruments, as you will need to make notes during these classes. There are vending machines at the facility, and several restaurants with 3 miles for those of you who may be attending from out of the area. Talk-in information can be requested on the 147.135 MHz repeater, with an 88.5 Hz tone.

This is an exciting opportunity for all local hams, and we encourage anyone that is interested to sign up for these sessions. Class size will be limited to about 35 people, and is expected to fill up fast. Reserve your spot as soon as possible! 73

1728. NIMS Documentation

Yahoo group: IndyHamRadio
Date: 2008-12-30 17:43:24 UTC
From: John Poindexter
Topic: 1728 Message: 1728

The U.S. Department of Homeland Security's (DHS) Federal Emergency Management Agency (FEMA) recently released a revised National Incident Management System (NIMS) - the national standard for incident management. NIMS establishes standardized incident management processes, protocols, and procedures that all federal, state, tribal and local responders will use to coordinate and conduct response actions.

NIMS expands on the original version released in March 2004 by clarifying existing NIMS concepts, better incorporating preparedness and planning and improving the overall readability of the document. The revised document also differentiates between the purposes of NIMS and the National Response Framework (NRF) by identifying how NIMS provides the action template for the management of incidents, while the NRF provides the policy structure and mechanisms for national-level policy for incident management.

General Rules
1. Object: Amateurs worldwide contact and exchange QSO information with other amateurs using digital modes (Baudot RTTY, ASCII, AMTOR, PSK31, and Packet—attended operation only) on 80, 40, 20, 15, and 10 meter bands. Any station may work any other station. Stations may be worked once per band, regardless of mode.
2. Date and Contest Period: First full weekend of January, but never on January 1. Begins 1800 UTC Saturday, ends 2400 UTC Sunday (January 3-4, 2009).
1. 2.1. Operate no more than 24 hours.
2. 2.2. The six hours of off time must be taken in no more than two blocks.
3. Entry Categories:
1. 3.1. Single Operator:
1. 3.1.1. Low Power.
2. 3.1.2. High Power.
2. 3.2. Multioperator, Single Transmitter:
1. 3.2.1 Power.
1. 3.2.1.1. Low Power
2. 3.2.1.2. High Power
2. 3.2.2. Stations are allowed only one transmitted signal at any given time.
3. 3.2.3. Includes those single operators that use any form of spotting assistance such as from nets or packet.
4. 3.2.4. Includes those that receive assistance with logging or relief operators, etc.
5. 3.2.5. Limited to 6 band changes (maximum) in any clock hour.
6. 3.2.6. The clock hour is from zero through 59 minutes.
7. 3.2.7. Band changes are defined so that, for example, a change from 20 meters 15 meters and then back to 20 meters constitutes two band changes.
4. Exchange:
1. 4.1. United States: Signal report and State.
2. 4.2. Canada: Signal report and Province.
3. 4.3. DX: Signal report and consecutive serial number, starting with 001.
5. Scoring:
1. 5.1. QSO Points: Count one point for each completed QSO.
2. 5.2. Multipliers: Each US state (except KH6 and KL7) plus the District of Columbia (DC), Canadian provinces/territories: NB (VE1, 9), NS (VE1), QC (VE2), ON (VE3), MB (VE4), SK (VE5), AB (VE6), BC (VE7), NWT (VE8), NF (VO1), LB (VO2), NU (VYØ), YT (VY1), PEI (VY2) and each DXCC country. KH6 and KL7 count only as separate DXCC entities.
1. 5.2.1. Count only once (not once per band).
2. 5.2.2. The US and Canada do not count as DXCC entities.
6. Reporting:
1. 6.1. All entries are must be postmarked or emailed by 2359 UTC Monday, February 2, 2009.
2. 6.2. Entries in electronic format may be submitted to RTTYRU@... or submitted on 3.5” diskette to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
3. 6.3. All logs that are created electronically are required to submit their electronic

log file in Cabrillo file format. A print out of an electronically generated log is not an acceptable substitute. A hand-written log that is later entered into a logging or other electronic program is considered an electronically generated log and must meet electronic file requirements.
4. 6.4. The Cabrillo entries include the header and the complete QSO list.
5. 6.5. Submissions may be made using the web applet at www.b4h.net/cabforms
6. 6.6. Hand-logged entries may be submitted to RTTY Round-Up, ARRL, 225 Main St, Newington, CT 06111.
7. Miscellaneous:
1. 7.1. Packet radio contacts made through digipeaters or gateways are not permitted.
2. 7.2. All ARRL Contest rules and forms may be downloaded from the ARRL Contest web page at: http://www.arrl.org/contests/forms or obtained from the Contest Branch by sending an SASE with 2 units of postage.
3. 7.3. For contest information contact contests@... or (860) 594-0232
8. Awards:
1. 8.1 Certificates will be awarded to:
1. 8.1.1. Top high power and low power Single Operator and Multioperator scorers in each ARRL/RAC Section.
2. 8.1.2. Top high power and low power Single Operator and Multioperator scorers in each DXCC country (other than W/VE).
2. 8.2. Plaques, if sponsored, will be awarded to the top scoring low and high power entrant in each category overall, each ARRL Division, and Canada.
1. 8.2.1. Unsponsored plaques may be purchased from the ARRL.
9. Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands below 30 MHz (HF)” November 2001 QST.

1730. First Notice - Indiana QSO Party May 2 2009

Yahoo group: IndyHamRadio
Date: 2008-12-31 17:13:21 UTC
From: Bob Burns W9RXR
Topic: 1730 Message: 1730

What follows is the message that KJ9C posted in the INHam reflector at qth.net regarding the Indiana QSO Party. I apologize in advance if this is a redundant post.

You can subscribe to the INHam reflector by pointing your browser to:

http://mailman.qth.net/mailman/listinfo/inham

I believe INHam is one of the oldest email reflectors that pertain to amateur radio in Indiana. The archives go back to 2001, but I know the group is older than that because I was moderator prior to 2000 (though I am not now). These reflectors have kinda been shuffled to the wayside in favor of on-line groups, like this one, and on-line message forums, but they are still a rock-solid way of communicating with folks with common interests.

Bob...

==========

From: "Mel Crichton" <kj9c@...>
Date: Tue, 30 Dec 2008 14:20:07 -0500
Subject: First Notice - Indiana QSO Party May 2 2009

Every May, hams in Indiana are the target of contesters, county hunters, and other hams who just want to have fun....The Indiana QSO Party is a 12 hour event in which hams all over the world try to work as many Indiana hams in as many Indiana counties as possible... it's the Indiana QSO Party, to be held May 2 2009.

Some ops take it seriously and go all out with big signals and a full 12 hour effort, hoping to win a plaque for best in-state or out-of-state score. Others poke around for an hour or two, enough to hand out a few dozen QSOs and make sure that their county or state is well represented. Most just want to see how well they can do in the time they have. There are others (the mobiles and portables) who spend weeks scouting out operating positions in those "rare" counties where they can create the loudest signals with their limited antennas.

Some clubs use INQP as a shake down for Field Day, setting up operations on a county line to be able to hand out two multipliers (and double QSO points) with each contact. Some seriously contend for the plaque awarded to the Indiana club with the highest aggregate score, others just want to beat their last year's score.

INQP is sponsored by the Hoosier DX & Contest Club, and rules, scores, and activity information are posted at

www.hdxcc.org/inqp. Take a look at the web pages, and plan to be on the air May 2 from your county. If you don't have an HF station, now's the time to line up a "guest op" position, upgrade your station or license, set up a mobile rig, or energize your club to put together a multi-op effort.

Hope to hear a LOT of Indiana signals on May 2.

Mel KJ9C
(INQP mobile/portable coordinator)

Here is their Description

This group is dedicated to the discussion & development of ALL amateur / ham radio Digital Voice & Data communication modes utilizing the HF/VHF/UHF/Microwave frequency bands. The group also discusses the role & use of digital modes in emergency communcation(ARES & EmComm) and using digital modes with satellites.

The purpose of the group is to exchange ideas & information, learn about operating the digital modes and get on the air. Hams from any area are welcome to join & participate in the group.

I stopped the email from coming by joining up and then marking for special notices only.

John

Very cool site:-)

I used to be into the QRP thing a few years back. But QRP and crappy antennas don't mix well, hi hi. Anyway, the thing that interested me the most was homebrewing. I don't get the time, or money, to build much but I like to tinker.

My next project I'm planning will be a remote coax switch similar to the RCS 8...

1740. Fw: SW Ohio Digital Symposiium Middletown, OH, Saturday Jan 10

Yahoo group: IndyHamRadio
Date: 2009-01-07 23:33:29 UTC
From: Mark Thompson
Topic: 1740 Message: 1740

----- Forwarded Message ----
From: Hank Greeb <n8xx@...>
To: illinoisdigitalham@yahoogroups.com
Sent: Wednesday, January 7, 2009 5:10:19 PM
Subject: [illinoisdigitalham] SW Ohio Digital Symposiium Middletown, OH, Saturday Jan 10

Twenty Third Annual Southwest Ohio
Digital Symposium
Saturday 10 January 2009
8:00 a.m. - 4:30 p.m.

Below is the "almost final" schedule for the 23rd annual SW Ohio Digital Symposium. It will be held from approximfrom 8 AM to approximately 4:30 PM EST, Saturday, January 10, 2009 in Thesken Hall, on the Middletown Campus of Miami University, Middletown, Ohio. If you have questions, please contact Jay Slough, K4ZLE k4zle <at> embarqmail <dot> com.

The schedule is always subject to the vagaries of weather, etc., but we will try to hold to it as closely as possible

8:00 - 8:20   Welcome by Jay, K4ZLE and Carl, K8CM
8:20 - 9:00   Mel Whitten, K0PFX, Digital Voice Techniques
9:00 - 10:00 Larry, K8LP, LP-Pan
10:00 - 11:00 Jeff, K7JPD, The Carl and Jerry project
11:00 - 12:00 ARRL forum w/ Jim, K8JE
12:00 -13:00 Lunch and demos
13:00 - 14:00 Steve, K8UD, and Gerd, WB8IFM, AMSAT update
14:00 - 15:00 Bill, N9CX on the AZ/EL controller project
15:00 - 16:00 Jim, K8IKE, 3rd order Intermod measurements
16:00 -   Prize drawings and close conference

More details, including directions, etc., are at http://www.swohdigi.org

We plan to have a "show and tell" of several implementations of digital modes. Among those planned are using D-Star and a portable PSK station using the NUE-PSK modem. Attendees are encouraged to bring their own pet project(s) to show and tell during the demonstration period(s)..

The purpose of continuing this series of technical presentations is to encourage others to get involved in the technical aspects of the hobby and to share the knowledge of what others are doing. You do not have to be an innovator to participate, just someone interested in what is happening in the realm of electronics technology. As you can see we will have a varied program of topics presented by a group

of skilled and knowledgeable individuals. Come and learn. The price is right!

There is no charge for attending the symposium. A box lunch will be available on site, expected cost under $8.00. Updates to the program will be posted here on the website, so please check in from time to time.

1741. expensive antenna module on Cadillac CTS.

Yahoo group: IndyHamRadio
Date: 2009-01-09 21:52:27 UTC
From: kc9brz
Topic: 1741 Message: 1741

Did you know that the car AM/FM radio antenna on a Cadillac CTS is located inside the roof above the passenger compartment?

Did you know that the car AM/FM radio antenna on a Cadillac CTS is in the same "antenna module" as the receiving antenna for the remote keyless entry ("RKE", aka "clicker") ?

Did you know the replacement cost of the antenna module is about $300 for the part, plus $500 worth of labor to figure out it was bad and then remove and reinstall the roof liner along with the diagnosis and replacement?

Did you know that when the anntenna module goes bad, it not only disables the remote keyless entry, but also can cause a short circuit that draws 2 amps of current from the battery when the car is turned off?

Now a question for your electromagnetic geniuses.

Does anyone think it possible for a magnetic mount 5/8th wave 2 meter antenna mounted on the center of the roof, putting out at variuos times 5 to 65 watts of power could have fried the car antenna module under it?

(And yes, I'm redneck/white-trash/geek enough to put a mag-mount antenna on the roof a caddy.)

Anywho, that'll larn me.

http://www.arrl.org/contests/rules/2009/jan-vhf-ss.html

2009 ARRL January VHF Sweepstakes
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 17-19, 2009).
3. Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power
2. 3.2. Single Operator Portable
3. 3.3. Rover.
1. 3.3.1. Rover
2. 3.3.2. Limited Rover
3. 3.3.3. Unlimited Rover
4. 3.4. Multioperator.
5. 3.5. Limited Multioperator.
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of signal report is optional.
5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count four points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each
3. 2 degrees x 1 degree grid square counts as one multiplier on each band it is worked.
4. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
1. 6.1. Electronic submissions may be emailed to JanuaryVHF@arrl.org and hand-written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT 06111.
2. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.

3. 6.3. Entries must be emailed or postmarked no later than 0359 UTC Wednesday, February 18, 2009.
4. 6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms
5. 6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and scoreif they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.
7. Miscellaneous:
1. 7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
3. 7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
8. Awards: Certificates will be awarded in the following categories:
1. 8.1. Single operator.
1. 8.1.1. Top single operator in each ARRL/RAC Section for high and low power.
2. 8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
2. 8.2. Top single-operator portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
3. 8.3. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
4. 8.4. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
5. 8.5. Top limited multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
6. 8.6. Top DX stations where significant effort or competition is evident.
9. Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” in November 2001 QST or on the ARRL Web at www.arrl.org/contests
2. 9.2. For more information contact contests@... or (860) 594-0232.

1747. Central Indiana Packet Radio

Yahoo group: IndyHamRadio
Date: 2009-01-11 20:51:03 UTC
From: Don West
Topic: 1747 Message: 1747

There is a packet Bulleting Board on the air in the Indianapolis area, K9CTB on 145.050. Neil has it set up as a full service Bulletin Board and is located in or near Acton in the southeast corner of Marion County. The BBS is connected via HF to a station in Iowa, which is connected to the national network. There is a node associated with the station, K9CTB-7 or alias INDY.

There is a node on the same frequency near 38th Street and Meridian K9UY, Alias NOIRAM (Marion spelled backwards), which can link to the BBS quite reliably.

In addition, there are nodes in Greenwood, W9DEW-7 and WV9V-5 in Columbus, which can link to the K9CTB BBS reliably as well.

The Anderson EOC (in Madison County) has a two-port station on 147.555 MHz at 135 feet and 446.175 MHz at 80 feet

If you are interested in helping to develop an emergency communications system via packet, please send me a message, w9dew@...

Don,

I have a Yaesu FT-2600 and a laptop. The laptop has a soundcard built in. I don't have a TNC. Can I do a TNC in software? Where can I find a diagram so I can build a FT-2600 to PC interface?

Thanks

Sounds like fun!

KB9BVN,

Yes, almost all of the sound card digital programs used for PSK31, RTTY, etc., will do packet as well. Examples are MixW & Digital Master 780 (part of Ham Radio Deluxe).

Go to packetradio.com. It is a commercial site (BuxComm) trying to sell you cables & interfaces, but they have diagrams for interfacing to almost all radios known to man. Your laptop will need an RS-232 connector for PTT control. A good USB-to-RS-232 adapter should work as well.

I Posted the Packet info to a Little Group I have in N/W Indiana , I have heard this talked about at The Repeater Council Meetings I went to in Indy and Ft. Wayne ,
I don't know if anyone in my area Hammond will be able to get into it. Maybe we can get some of them to dust off the old Packet gear and get back on the Air.

WOW --- to hear, see, or even read about an alias called "NOIRAM".

Now I wonder what kind of nut came up with THAT??!!?? (Chuckle!)

Whew --- blast from the past! My stuff was shut down the summer of '97.
Long, long, long ago!!! (OK --- How many old timers remember???)

It is kind of strange that it comes up --- just the other day I was trying to help a guy out with "house generated" RFI. I mentioned that my main experience was keeping two computers, four TNC's, two 2-meter radios, one 220 radio and one HF rig happy all at the same time. It was quite an effort, but then that is part of the thrill of ham radio!

Glad to hear that the packet world is still doing fine!

AP source: Ex-FCC official to be tapped as chair
Tuesday January 13, 11:32 am ET
By Joelle Tessler, AP Technology Writer
AP source: Obama to tap former Internet executive and FCC official Genachowski to be FCC chair

WASHINGTON (AP) -- President-elect Barack Obama plans to nominate a key technology advisor to be the next chairman of the Federal Communications Commission, according to a person who has worked with the transition team on technology issues.
Julius Genachowski (jen-uh-KOW'-skee) held several positions at the FCC during the Clinton administration. He also was an executive at IAC/InterActive Corp. from 1997 to 2005. And he served as a law clerk at the Supreme Court from 1992 to 1994. He and Obama were friends at Harvard Law School.

The Obama team would not confirm earlier reports of the planned appointment. The person knowledgeable about the plans to nominate Genachowski spoke on condition of anonymity because the decision has not been formally announced.

http://biz.yahoo.com/ap/090113/fcc_chairman.html?.v=2

While everyone is worried about the Fairness doctrine, how does Obama having a college buddy as FCC chair effect us hams?

Topic: 1753 Message: 1754

Well, he's not a ham. I was hoping for an Amateur Radio op to take the place of Kevin Martin.

This is from Bloomberg (Under Fair Use)

"The FCC's tasks include helping broadcasters and households cope with February's switch to digital signals, which could cut service to millions of homes that rely on traditional analog televisions. The agency also may promote high-speed Internet use, which Obama has identified as a key step in boosting the U.S. economy.

Other priorities may be helping parents control what their children watch on TV and encouraging diversity in media ownership, goals listed on the Obama Web site www.change.gov. The site also calls for support of so-called network neutrality rules, which would bar network operators from favoring some sites by letting their content reach Web users faster. "

Couple questions...what the heck gives the federal government the power to control what I allow and disallow my kids to watch on TV? It also concerns me that this new FCC chief and our new President may also be in favor of more BPL type internet delivery systems.

SB QST @ ARL $ARLB006
ARLB006 Michael J. Copps Named Acting FCC Chairman

ZCZC AG06
QST de W1AW
ARRL Bulletin 6 ARLB006
From ARRL Headquarters
Newington CT January 23, 2009
To all radio amateurs

SB QST ARL ARLB006
ARLB006 Michael J. Copps Named Acting FCC Chairman

On Thursday, January 22, President Barack Obama named current FCC Commissioner Michael Copps as Acting Chairman of the Commission. Last week, sources close to the President mentioned Julius Genachowski would be nominated as Chairman. Copps will serve as Acting Chairman until a new Commissioner/Chairman is confirmed.

"I am honored to be designated as Acting Chairman of the FCC," Copps said in a statement released by the FCC. "I thank President Obama for his confidence in me and for this opportunity to serve. I know that I have a truly gifted and terrific team to work with. I pledge every effort I am capable of to help steer the Commission through its current transition to new leadership."

ARRL Chief Executive Officer David Sumner, K1ZZ, congratulated Copps on his appointment. "Whenever we have sought a meeting with him or his staff, his door has always been open to us," he said.

Currently serving a second term as FCC Commissioner, Copps began his first term with the Commission in 2001. Before his appointment to the FCC, he served as Assistant Secretary of Commerce for Trade Development at the US Department of Commerce, where he was previously Deputy Assistant Secretary of Commerce for Basic Industries. Copps came to Washington in 1970, joining the staff of Senator Ernest Hollings (D-SC) and served for more than a decade as his Chief of Staff. He has also held positions at a Fortune 500 company and at a major trade association. Before coming to Washington, Copps was a professor of American history at Loyola University of the South. He received a BA from Wofford College and earned a PhD from the University of North Carolina at Chapel Hill.

Upon being sworn for his second term as FCC Commissioner in 2006, Copps said that "The last four and a half years have been tremendously transformative for the world of telecommunications and the media. The future holds even greater challenge. I look forward

to continuing to work with my colleagues on the Commission, with the Congress and with all the other stakeholders to help bring the most advanced, accessible and cost-effective communications system in the world to all American consumers."

CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1767. Northern Indiana Packet Radio Workshop III

Yahoo group: IndyHamRadio
Date: 2009-01-30 01:57:02 UTC
From: Mark Thompson
Topic: 1767 Message: 1767

Northern Indiana Packet Radio Workshop III
    Posted by: "Joseph Lawrence" k9rfz@... k9rfz
    Date: Thu Jan 29, 2009 10:16 am ((PST))

WHAT: Packet Radio Workshop III
WHEN: Saturday March 14, 10am to 3pm
WHERE: Indiana - Purdue University Campus, Fort Wayne Indiana
      (directions/map available when you register)
COST: FREE

Registration Required - Limited Space for first 75 persons.
Contact Joseph Lawrence, k9rfz@yahoo.com to register

This workshop continues the effort of building a reliable packet
radio network throughout Northern Indiana. Four classrooms have been
reserved at IPFW to hold separate packet stations for live
demonstrations of different hardware / software configurations. Want
to see soundcard packet in action running MixW2, then step into one
room and give it a try. Want to see a TNC based system running
Outpost, then try another room. Whether you're a seasoned packet
sysop or a newbie just wanting to look and get ideas, you are welcome
to attend.

When registering, please list name, call sign, QTH, and phone number.
There will be a break at lunch, but no meal is provided.
Spread the word in your local clubs and newsletters.

Joseph Lawrence, K9RFZ
Allen County ARES EC / RACES RO
Indiana Section, District 3 ARES EC

1768. HF/VHF Digital Modes Presentations at AES Superfest, Saturday, April 4th

SUPERFEST 2009

HOURS: Friday, April 3rd (2:00 PM to 6:00 PM) - Saturday, April 4th (8:30 AM to 3:00 PM)

FREE Admission * Manufacturer Representatives * Gordon West * Latest Gear on Display * Interesting Forums * Local Clubs & Organizations * V.E. Testing * DXCC Card Checking * Fox Hunt * Prize Drawings *Grand Prize * Hot Food * Talk-in * Free Parking/Shuttle Van * ARRL Sanctioned Event

Special Superfest Guest & Forum Speaker, Steve Ford, WB8IMY
The Editor of QST magazine and ARRL Publications Manager. Steve spent a number of years in broadcast and print journalism before coming to the ARRL in 1991. He holds an Amateur Extra class license and enjoys a variety of ham interests including Digital and Satellite operating. Steve is the author of many ARRL publications, including the recently published titles ARRL’s VHF Digital Handbook, ARRL’s HF Digital Handbook 4th edition, and The ARRL Satellite Handbook.

At Superfest meet Steve at the ARRL booth and be sure to catch his two great forums:

Introduction to HF Digital:
Learn how to put your computer to work exploring the fascinating world of HF digital communications. With HF digital even a low-power station with indoor antennas can work the world.

Exploring the VHF Digital World:
Discover everything from APRS to meteor scatter. Learn what it takes to operate all the latest VHF digital modes.

Hello

I think this is a great idea. Did you have a good turn out? I miss reading the email untill now. I think I live to far north to be in the net, but love the idea of getting 2 meter ssb up and going more. Hope it works out.

John

Only a few for the first net, John. But I plan to keep it going and try
to build it up over time.

Also, last Thursday I still had 3/4" of ice loading on all my antennas.
The 3 or 4 to one SWR wasn't helping me at all.... Ice is finally gone
now, so hopefully next week I will be able to hear better.

I'm not sure where you are located, but give us a try. Sometimes you
would be amazed what you can do on 2m SSB with a little good propagation
thrown in. Plus, I'm hoping I can get a few good relay stations to join
us to help expand the range.

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday February 5, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 3 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1773. ARLB011 ARRL Executive Committee Issues Mobile Amateur Radio Operation Policy Statement

Yahoo group: IndyHamRadio
Date: 2009-02-05 00:59:41 UTC
From: Mark Thompson
Topic: 1773 Message: 1773
Attachments: 1 described; binary payloads are missing from this source WARC

```
ZCZC AG11
QST de W1AW
ARRL Bulletin 11  ARLB011
From ARRL Headquarters
Newington CT  February 3, 2009
To all radio amateurs

SB QST ARL ARLB011
ARLB011 ARRL Executive Committee Issues Mobile Amateur Radio
Operation Policy Statement

On January 30, at the instruction of the Board of Directors at its
January 2009 meeting, the ARRL Executive Committee adopted a policy
statement on mobile Amateur Radio operations. The statement
addresses the growing number of proposed state and local laws and
ordinances regulating the use of cellular telephone and text
messaging, inadvertently affecting Amateur Radio mobile
communications.

In its statement, the Executive Committee urges state and municipal
legislators to limit the scope of their proposals, limiting them to
devices such as full duplex wireless telephones and related
hand-held or portable equipment. Alternately, it suggests that
licensed Amateur Radio operation be listed specifically as an
exclusion to the proposed regulations.

"At the start of each new session, you see a flurry of this type of
proposal in state legislatures across the country," said ARRL
Regulatory Information Manager Dan Henderson, N1ND.

As of February 1, 2009, Henderson said that the ARRL is aware of
proposals in 11 states: Georgia, Hawaii Idaho, Illinois, Iowa,
Maine, Montana, Texas, Utah, Virginia and Wyoming, as well as
several local city or town proposals.

"These proposals are usually intended to regulate cellular telephone
and text messaging by drivers as a matter of safety but, when they
are written in very broad terms, can include Amateur Radio mobile
operations in the 'net' they cast," Henderson continued. "The
Executive Committee's policy statement gives a good, concise
background of the role the Amateur Service plays in public safety
and service communications. It also highlights the differences
between communications conducted by cellular telephone and those
using Amateur Radio. Finally, the statement offers some suggested
```

statutory language for state motor vehicle codes which would protect Amateur Radio mobile operation."

The ARRL recognizes that driver inattention is a leading cause of automobile accidents. The policy statement raises the fact that cell phones utilize full duplex communications -- where the user is talking and listening simultaneously. The Executive Committee statement says "Two-way radio use is dissimilar from full-duplex cellular telephone communications because the operator spends little time actually transmitting; the time spent listening is more similar to, and arguably less distracting than listening to a broadcast radio, CD or MP3 player. There are no distinctions to be made between or among Amateur Radio, public safety land mobile, private land mobile or citizen's radio in terms of driver distraction. All are distinguishable from mobile cellular telephone communications in this respect."

The ARRL Policy Statement also recognizes the responsibility of the amateur community to conduct its activities in a manner that does not create unsafe operation of their motor vehicle. "Safety has to be a top concern at all times," Henderson concluded.

The ARRL Policy Statement can be found on the web at, http://www.arrl.org/govrelations/MobileAmateurRadioPolicyStatement.pdf.

ARRL PUBLICATIONS BULLETIN – February 6, 2009 www.arrl.org/new

---

Dive into the Digital Radio Universe!
NOW SHIPPING!
The ARRL Digital Technology for Emergency Communications Course CD-ROM

In this course, we will introduce you to all the ways Amateur Radio operators are using digital technology as a valuableemergency communications tool.
 Get answers to questions such as:
...can you transfer supply lists or personnel assignments between em ergency operations sites?
...can you get critical e-mails to the Internet if a connection goes down?
...can you relay digital images of damage at specific locations?
...can you track the locations of emergency personnel and display them on computer maps?
…and more!

 The topics discussed during the course include:=0 A

o Packet radio APRS
o Winlink 2000
o IRLP
o EchoLink and WIRES-II
o D-STAR
o APCO25
o HF sound card modes
o Automatic Link Establishment (“ALE”)

Illustrations, screenshots, Internet links and audio files make your learning experience exciting and fun!

“This course is a great starting point for anyone interested in the public service applications of digital communications technology."
-- Steve Ford, WB8IMY, Course Author and QST Editor/ARRL Publications Manager

The 2009 ARRL/TAPR DCC (Digital Communications Conference) will again be in Chicago on September 25 - 27.

More information at www.tapr.org/dcc Feel free to publish attached advertisement in your club newsletter.

----- Forwarded Message ----
From: Gary kn4aq@...
Sent: Friday, February 6, 2009 8:34:33 AM
Subject: ARRL/TAPR 2008 DCC Video Set Now Available:

ARRL/TAPR 2008 DCC Video Set Now Available:

The ARRL and TAPR Digital Communications Conference was a three-day conference held in late September near Chicago. It featured twenty-one presentations from hams on the leading edge of digital communication, including D-STAR, a variety of programs for packet, Winlink2000 and advanced Software Defined Radio.

ARVN:Amateur Radio//Video News captured every minute of the presentations on video,* and now offers them on six DVDs in high quality video and audio. You can order by credit card or PayPal at www.arvideonews.com.

The presentations are grouped on the six DVDs in as logical an order as possible (listed below). You can buy the DVDs individually ($15/ea,plus $3 shipping, $4 international). Or get whole set for $75 (plus $3/$4 shipping). The complete set saves you $30 over buying them individually, after shipping cost.

Here's how the DVDs are laid out:

DVD 1: Packet

* Nick Luther K9NL – Weather Data Distribution over AX.25. Thought 1200 bps packet is too slow for images? Nick makes it work.

* John Blowsky KB2SCS – EcomSCS and GatewaySCS "real e-mail clients" for Packet Radio mail.
* Paul Wiedemeier KE5LKY – UDPcast for IP Multicast over Packet Radio. Better data distribution to multiple stations.

* Eric Westgard NY9D – It's the Network: Minnesota Packet/D-STAR Data Network. DVD 2: Software Defined Radio
* Matt Ettus N2MJI – USRP2 Universal Software Radio Peripheral.
* Paul Rinaldo W4RI – SDR Outlook. The regulatory environment for SDR.
* Scott Cowling WA2DFI – HPSDR Update. How HPSDR, TAPR, and AMSAT work together to develop cutting edge technology, and where things stand now.
* Jerry Shirar N9XR – Clocking the Data. How crystals and the Pierce oscillator work to stabilize your digital project.
DVD 3: Winlink 2000, D-STAR, APRS

* Victor Poor W5SMM – Winlink 2000 Update. A complete rebuild to better handle emergency communications.
* Rick Muething KN6KB – WINMOR, a sound card mode for Winlink. Performance rivaling Pactor II and III; far less expensive.
* Bob Bruninga WB4APR – APRS Initiatives Since 2004. There's lots more to APRS than position tracking, and Bob has big plans!
* Pete Loveall AE5PL – D-STAR Uncovered. How D-STAR really works, from one of the K5TIT guys. DVD 4: AMSAT, Publishing

* Steven Bible N7HPR – SuitSat 2 Update. SuitSat 1 was a rush project, literally "pushed out the door." SuitSat 2 will be a real satellite with serious capabilities.(It'll be pushed out the door, too.)

* Tom Clark K3IO – AMSAT Eagle GEO. Tom's proposal for a geosynchronous Amateur Radio satellite.Hint: 1200 MHz is now practically DC.

* Larry Wolfgang WR1B – Writing for QEX, QST. You've developed a great project. Now get paid to tell the world about it. Here's how.
* Joe Lynch N6CL – Writing for CQ, CQ VHF. A little bit lighter side of technical writing. DVD 5: Introductory Sessions

* Mel Whitten K0PFX – HF Digital Voice. A good grounding in WinDRM, FDMDV and the AOR modem digital voice modes for HF.
* Mark Thompson WB9QZB – D-STAR Voice and Data. Answers your questions on how to operate D-STAR.
* Pete Loveall – DPRS. Pete wrote DPRS to better utilize the GPS and low-speed data functionality of the DV mode. ICOM makes direct use of it in the newer radios.
* Dan Smith KK7DS – D-RATS. Dan wrote D-RATS to make D-STAR low-speed text chat multi-platform. Then he threw in the kitchen sink. DVD 6: Sunday Seminar

* Phil Harman VK6APH – Software Radio "Through the Looking Glass." This is the full morning presentation of how the HPSDR Mercury receiver was developed. Mercury places the A/D converter at the antenna (after only a band-pass filter). So everything is done in software. Phil says performance is as good or better than the high-end commercial analog receivers.
Again, you can order the DVDs individually, or get the whole set. www.ARVideoNews.com

73,
Gary KN4AQ
Producer

* The "D-STAR Night" presentations are not included. That content is similar to the 2008 Dayton Hamvention D-STAR Meetings , avaialble on DVD from ARVN. Tom Clark's talk at the DCC Banquet is also not included.

Please find attached (or at http://www.w9og.net <http://www.w9og.net/>) a copy of SPARKS, Evansville Radio Club newsletter. Of particular interest this time of year are two articles: one on Generator Safety, "Emergency Power" and another on the Amateur Radio & RACES response to the ice storms of last week, "Emergency assistance". Good Stuff!

The address for GT South's is still wrong. It's not on 96th street.

Could the person at the driver's wheel of this Yahoo group
pretty please change "3855 E 96th St." to "5711 E 71st St "

The "NOTE" is correct, and can be left as is.

Sanctuary much.

-Felix Unger, KC9BRZ.

1785. Gary Stouder, K9SG, on Desecheo Island

Yahoo group: IndyHamRadio
Date: 2009-02-09 18:39:25 UTC
From: Ken Bandy
Topic: 1785 Message: 1785

Hello all. For those of you that don't know Gary, he is an active Dxer and Dxpedition participant from Greenfield, IN. His most notable trip was the 3Y0X Dxpedition to Peter I island. I received a note this afternoon from Gary stating that his team is assembled in Puerto Rico, and ready to go on to Desecheo Island on Thursday morning. Their call will be K5D and this is the 6th most wanted country in the world.

If you want to check out the team's web page, point your browser to www.kp5.us

1786. School Club Roundup

Yahoo group: IndyHamRadio
Date: 2009-02-10 13:52:15 UTC
From: Neil Rapp
Topic: 470 Message: 1786

It's that time again... when the Bloomington High School South
amateur radio club needs your contacts! It's School Club Roundup week.

There are several schools participating, so please keep an ear out
for them. If you hear one, give them a call! The exchange is
callsign, state/country, and signal report.

Please call us on 146.58 anytime the shack is open if you're in the
Bloomington area. We're also usually on 20m PSK, 20m phone, or 40m
phone.

14.070 PSK
14.250 - 14.280 USB (usually around 14.260)
7.225 - 7.255 LSB

We try to keep our current location posted on DXSummit
http://www.dxsummit.fi/Announcements.aspx

Here are our approximate operating times for the rest of the week:

Tuesday - 12:15 to 5:30 pm local
Wednesday - 12:50 to 5:30 pm local
Thursday - 12:15 to 3:00 pm local
Friday - 12:30 to 6:30 pm local

Our HF vertical broke in the windstorm, but thanks to some ideas from
Bob, some pipe, duct tape, and bubble gum we hope to have it back up
this afternoon.

1788. any Ham classes, north side Marion / Hamilton / Hancock Counties?

Yahoo group: IndyHamRadio
Date: 2009-02-10 15:12:32 UTC
From: kc9brz
Topic: 1788 Message: 1788

INARRL.org (the state ARRL affiliate web site) does a good
job linking to License Exam schedules at ARRL.org.

But I can't find any listings for license _class_ schedules.

Q1. Does anyone have any, or know of any, license classes going on?

Q2. In case I need to organize and teach my own class for some
people whom I want to recruit to ham radio, which seems to work better:

a) a Gordon West style class (using his book) that teaches to the exam?
which gets people on the air faster.

or:

b) an ARRL style class (using the ARRL licensing/study manual) that
gets more into theory and practice and not "just passing the test" ?
which takes longer, but makes people more useful once they are on
the air.

Thanks.

1789. Re: [IndyHamRadio] any Ham classes, north side Marion / Hamilton / Hancock Counties?

Yahoo group: IndyHamRadio

From: Trevor Fulk
Topic: 1788 Message: 1789

As for classes presently scheduled, don't know. But in answer to your second question, my observation is that the ARRL style class tends to be more effective for most people, with the Gordon West books recommended as review material for the test if the student wants to use them. There is certainly nothing wrong with teaching the test, but I would think the community is better served by a license class that produces operators more familiar with a wider range of amateur operations. The one critisism of the ARRL license book model is there is over emphasis on electrical theory (which is a weak area for most non-technical people) and not enough coverage of 'Now that I have a license, and maybe bought a rig, what do I do with it?' My personal suggestion is using the ARRL book, but making sure to include some additional information (either by meeting with a local ham, or by bringing gear to the class) about what to do with the radio after you get your license (DX, EMCOMM, contesting, satellite and other operation types, as well as the simple "How do I turn this on, and what does that knob do?" introductions). The ARRL book does cover operating activities to some extent, but many classes don't as it's not really part of the exam. If you include something like this for many class periods, it doesn't seem to the student that they are learning all this stuff to pass an exam, and then won't know what to do with the radio once they get one.

My .02 FWIW.

Midstate ARC in Franklin/Greenwood uses the ARRL books. I am a instructor for I think Chapter 4. We run our classes one night a week for four weeks and last year I think we ended up with 20 or new Techs.

I like the ARRL book better than the Gordon West book. Both are certainly capable of doing the job though.

73

BTW...our Tech classes start tonight and run for 4 weeks.

There is a class in Hendricks County, meeting at the Danville Senior Center Wednesdays at 7:00 pm. It's probably in about it's 2nd or 3rd week now. There was a class in Lebanon that's testing this coming Monday, the 16th, but that doesn't do you much good.

I know the Danville class uses the ARRL books. Personally, when I studied with them for my extra, I bought the ARRL book, plus the Gordon West book. That way I had a background of the material with the ARRL book, and then was able to "study the test" with Gordo's book.

Personally, I like to see them learn some theory over just learning
the test. But, in reality it is really up to the person. Some want to
learn as they go and others want to know more before they start.

I guess I still remember the old way when we didn't have the luxury of
studying the test to pass it. We had to know the theory and hope we
knew enough.

Sorry, I can't be of more help.

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday February 12, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1800. Ham Tech class for Castleton - Geist - Fishers area.

Yahoo group: IndyHamRadio
Date: 2009-02-12 03:54:20 UTC
From: kc9brz
Topic: 1800 Message: 1800

Looks like I'm going to be organizing a Tech class for the
people from my church who want to be hams. I'll make sure
the class will be open to the public.

It will be at one of two church locations:

Either: East 30th St, near German Church Road, Indy.
or: Sunblest Blvd, near Allisonville Rd & 116th, Fishers.

Any hams who have experience teaching classes, who live near
those two locations want to help out?

It will need to be either a Wednesday, a Thursday, or a
Friday night class.

1801. Re: [IndyHamRadio] Ham Tech class for Castleton - Geist - Fishers area.

1808. IN-ARRL BULLETIN 01-2009

Yahoo group: IndyHamRadio
Date: 2009-02-23 04:28:42 UTC
From: KB9BVN
Topic: 1808 Message: 1808

IN-ARRL BULLETIN 01-2009
11:26PM - FEBRUARY 22, 2009

Indiana 2009 Legislative Update - February 22, 2009

With the Indiana House and Senate going into their final week to pass bills in their respective chambers, it looks like Indiana hams can rest easy. ARRL Indiana State Government Liaison David Spoelstra, N9KT, has been active on five bills that could have affected Indiana hams:

SB0080: Cell phone use while driving:
http://tinyurl.com/aoq3k9

SB0196: Electronic devices while operating a motor vehicle:
http://tinyurl.com/dgdspt

HB1181: Ban on visual display screens while driving:
http://tinyurl.com/bkdort

HB1242: Mobile telephone use:
http://tinyurl.com/asefg9

HB1699: Cell phone use while driving:
http://tinyurl.com/ak6oma

On February 9th, SB0196 was rendered neutral by an amendment that made the bill pertain only to "a person operating a motor vehicle as a public passenger chauffeur" - i.e. bus driver, taxi driver, etc.

On February 16th, HB1242 was rendered neutral by an amendment that excluded "two-way radios" and "handheld, portable, two-way radio transceivers commonly known as a walkie-talkies".

With three days remaining to pass bills in each chamber, and no further committee meetings scheduled, it looks like SB0080, HB1181, and HB1699 will die in committee.

David will continue to monitor SB0196 for new amendments that might affect Indiana hams as it moves through the House on its way to becoming a law. He will also do the same for HB1242 if it gets voted over to the Senate this week.

David would like to thank Indiana Section Manager John Poindexter, W3ML, for his support as well as the countless Indiana hams who contacted their legislators to voice their concerns about these five bills.

1812. FCC Revokes License of Indiana Ham

Yahoo group: IndyHamRadio
Date: 2009-02-28 03:34:01 UTC
From: Mark Thompson
Topic: 1812 Message: 1812

* FCC Revokes License of Indiana Ham: On February 25, the Federal Communications Commission revoked the license of Lonnie L. Keeney, KB9RFO, of Greencastle Indiana. According to the FCC, Keeney's 2002 conviction of child molestation, a Class C felony, renders him "lack[ing] the requisite character qualifications to be and remain a Commission licensee." Keeney has 30 days to appeal the revocation <http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-456A1.pdf>.

1813. ENFORCEMENT: INDIANAPOLIS HAMS BUST COPS FOR LANGUAGE ON UNOFFICIAL CHAT CHANNEL

Amateur Radio NewslineT Report 1646 - February 27 2009

Amateur Radio Newsline report number 1646 with a release date of
Friday, February 27th, 2009 to follow in 5-4-3-2-1.

ENFORCEMENT: INDIANAPOLIS HAMS BUST COPS FOR LANGUAGE ON UNOFFICIAL
CHAT CHANNEL

Hams in Indianapolis are taking credit for getting city police in that
city to top using unofficial extra radios on which the cops reportedly
used language that might make a sailor blush. Jack Parker, W8ISH, has
the details:

--

Dozens if not hundreds of Indianapolis Metro Police Officers have been
busted for using Amateur Radios illegally to rag chew while on duty.
According to a report aired on an Indianapolis TV station, complaints
to the FCC from local hams lead to a shake down of all Metro Police
vehicles.   Amateur Radio operators reported hearing foul language and
improper usage of Amateur Radio frequencies by Metro Police officers.

This prompted the department to do a three-day inspection of cruisers,
ordering everyone with an unlicensed radio to remove them..

Department PIO Lt. Jeff Duhamel had this to say:

--

"Apparently, there has been a problem with some language, which is a
violation of the FCC regulations. The chief has decided that the
officers should pull them out of their vehicles."

--

Amateur radio repeaters were ripe with reaction to News of the police
radio crackdown.

--

First Ham: "They were talking on blogs like they were using ham radios
like they were on ham radio frequencies. Well that wasn't the case.
Still they're transmitting and talking on frequencies they are not
licensed to use. It doesn't matter if they were licensed twenty years
ago they are not licensed now and they should not be using them period.

Second Ham: "They are not type accepted. So they have a type acceptance problem. So far that is the only thing I've seen that's inappropriate other than the report of language which is not appropriate on any frequency."

--

Local hams are expected to monitor the success of this crackdown and report further violations.

Reporting from Indianapolis, this is Jack Parker, W8ISH.

--

While some bloggers are advising Indianapolis hams to keep a low profile for a while others point out that the officers are the ones that are likely worried. Now they know that there are thousands of ears listening to their every word on what they thought was their unofficial chat channel. Ears with tape recorders ready to send more complaints to the FCC.. (W8ISH)

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Jim Meachen, ZL2BHF, in Auckland, New Zealand saying 73 and we thank you for listening.

Cops have been using out of band CBs as well in IPD. It was one way to get around the structure of the Trunking system. I have warned those who run the State system that if they go totally encrypted then cops will get talk groups made up that the supervisors do not know about. And if you are not given permissions to use a talk group then no one would even know that they were there.

The reason that out of band CBs were being used was that way the cops could joke and socialize without their supervisors listening in. Also it was a way for them to co-ordinate after an incident (ie shooting). A few years back Speedway cops were caught using Ham 2m gear in the same manner.

Greg, I'm not sure about them being able to "get talk groups made up". My understanding is that trunked systems are pretty secure, as far as getting radios programmed to them, etc., requiring programming keys, and such the like. If they were able to get that done, that would require someone from SAFE-T administration to set up the talk group, as well as program the radios. I'd say that would be a lot bigger scandal than the one Indy has now if that happened.

Ok, do not want to defame anyone. The calls are close.

My call is very close to another Indy ham as well. It does cause problems.

My first reaction was to question whether this was a true story. When we post such things, we do have to be careful.

The administration have little to do with the actual programming. A supervisor may ok the programming or the creation of a new talk group but it is a technician who does the work. Thus most of the real "power" is in the hands of a lower level employee (or contractor) who could be "encouraged" to make up a talk group and program HTs.

Encryption for everyday communications is foolish. Not only would it prevent monitoring by the public (and media who would fight it) but cops and other public safety folks need to be able to monitor traffic outside of their own communications. We have had many cases were one organization will not authorize anyone else to be on their talk groups. Fire departments will lock out the ambulance crews. In Marion County the special deputies who transport prisoners are not allowed IPD or patrol talk groups. Thus if they have an escaped prisoner, they have to go through dispatch. If everything is encrypted, no one, to include the police, will be able to hear anything that is not programmed into their radios.

Unencrypted radios allow for greater interoperability.

1820. FCC Revokes License of Indiana Ham

Yahoo group: IndyHamRadio
Date: 2009-02-28 14:48:44 UTC
From: KB9BVN
Topic: 1812 Message: 1820

The FCC started prceedings against Keeney on Novemebr 20, 2007.

http://www.fcc.gov/eb/Orders/2007/DA-07-4675A1.html

> * FCC Revokes License of Indiana Ham: On February 25, the Federal
> Communications Commission revoked the license of Lonnie L. Keeney,
> KB9RFO, of Greencastle Indiana. According to the FCC, Keeney's 2002
> conviction of child molestation, a Class C felony, renders him

> Commission licensee." Keeney has 30 days to appeal the revocation
> http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-09-456A1.pdf.

Keeney was first issued his license in 1998. He was charged with two counts of child molestation and was found guilty of one count of child molestation on December 10, 2002, through a plea bargain. Keeney was sentenced to six years of incarceration with the Indiana Department of Corrections but as part of the plea agreement he was ordered to serve one year and the other five years were dismissed (he got out of jail in six months). According to public records, Keeney was also to serve 5 years of probation once he was released from prison. Keeney was placed on probation from May 12, 2003 until May 12, 2008.

I'm curious about a couple of things. First, why did the FCC wait almost five years AFTER Keeney was convicted, to revoke his license? I'm not anti FCC and pro child molestor, I was just wondering why they waited so long. I wonder if there is even a mechanism in place to notify the FCC of a license holder being convicted of a felony. Does the FCC run criminal background checks on every applicant?

I also found this:

Call Sign: KB9RFO, Licensee ID: L00205376
Grant Date: 04/26/2007, Expiration Date: 07/24/2017, Certifier: Lonnie L Keeney
Registrant: Lonnie L Keeney, 181 S Co Rd 100 E, Greencastle, IN 46135

If his original license was issued in 1998, how did the grant date change to 2007? Maybe this is when he upgraded to General? I wonder if that's when the FCC found out that Keeney was a convicted felon?

According to the Indiana Sex and Violent Offender Registry, Keeney must register annually until the year 2013. Looks like he served a total of six months in jail.

Just curious.

AFIK, there is no such thing as an "unlicensed radio". It's
the operator who is licensed or not.

> Department PIO Lt. Jeff Duhamel had this to say:
>
> "Apparently, there has been a problem with some language,
> which is a violation of the FCC regulations. The chief

I hope that officers who are licensed hams get to keep
their amateur radio equipment in their cars.

This article left some questions unanswered. What
equipment and what frequencies were they using? Did they
also have some secret repeater, or were they all using
simplex? And how will this affect cops who _are_
licensed hams? Will they get to keep their equipment
in their squad cars?

1823. Dropping GMRS license requirements like they did with CB.

Yahoo group: IndyHamRadio
Date: 2009-02-28 18:13:27 UTC
From: kc9brz
Topic: 1823 Message: 1823

I remember back when it took a license (requiring a fee,
but not a test) to operate a CB radio with over a certain
wattage output.

CB became so popular, and hardly anyone bothered to get a
license, that the FCC dropped the license requirement.

FRS/GMRS radios are now becoming the new CB's.

FRS does not require a license, but GMRS does.

But very few (hardly any) FRS-only radios are on the market now.
They are almost always combination FRS/GMRS radios.

Hundreds of thousands (pretty soon millions) of GMRS radios
will be out there, many more than there are GMRS licenses in effect.

Is there any talk in the FCC to drop the GMRS license requirement?

1824. Re: [IndyHamRadio] Re: Cops on unofficial chat frequency/channel.

Yahoo group: IndyHamRadio

From: Zack Widup
Topic: 1813 Message: 1824

I had the same thought. It wasn't clear what equipment or bands/frequencies were being used. And IF there were police who were licensed hams using equipment in the ham bands, were they talking to people who were not licensed who were transmitting in ham bands? If so, they're just as guilty as the unlicensed ops.

Being Retired from Law Enforcement and a Ham for over 30 ys I would like to add to this, Most Police Officers and FD And City employees do NOT Know anything about Radios or how they work, They sure know how to abuse and break them because they do not pay for them , We do as Tax payers that is why they cost so much, Example old Motorola Motrac with a Service Maintenance contract For What 40 Yrs and Still works they never go bad.

Most actual Department Radios and Freqs used are required to be Recorded with a Date and Time stamp, to Not only Protect You but them .

So lots of times there is a need to have some other type of Communications Most used Nextel/ Now Sprint Push to talk including the Drug dealers and other bad people. It is Encrypted and not heard on a Scanner, Well one We cannot afford anyway

Working surveillance I know that Scanner user can normally pick up in clear Communications , So I have used other means of Communicating for that reason and also as much as I hate to admit Not all of the Officers in Your own Department can be trusted , Many times I wondered how the Drug dealers know about a pending drug raid , only to find out later they were a CI Confidential Informant for a PD Officer .

I recall many yrs ago when a Local Dept switched over to a New UHF repeater Freqs . Well the Radio shop set the radios up for Talk around which meant You just go Direct on the output and not come through the repeater, Well a Couple of Officers would use this Freq thinking it was their little Private one and talk about the Dispatcher, Supervisors Etc . Until I finally told them that any scanner listener could hear them, and if the Supervisor knew how to turn the PL off they could too. That was Funny

But there is NO Excuse to Blatantly and Knowing use Unauthorized Freqs and act like Idiots above the Laws , I do recall one time seeing a list of Freqs of about 25 that was Lic Free by the FCC With 2 Watts or less for Police Departments to use.

The Police Officers who did this Did NOT do it by themselves A Ham or Someone who has Knowledge of Communications Helped them

I will add that Newer is Not better our Local department spent 3 Million Dollars 4 Yrs ago to upgrade to Motorola System 2 Trunking , they have had nothing but problems , Not just for Them but us the Citizens

Example for the Hams on here and People who know how Repeaters work , the Strongest signal to the Receive site gets in , if You and Your partner was on the other side of town one of You at the Front door Gun out and one at the back door Gun out getting reddy to go in and You key up the Mic to let the Officers know Hey it is You coming in the back door Don't shoot Well lets see You are less the 50 ft but the Receive site over on the other side of Town right next to Dunkin Donuts where the Officer just a Second before you key up , Keys up 10-8 Back in service Guess who the Dispatcher hears ,

NOT You , This is what I actually Showed a couple of Det Friends of Mine Picked up 2 Bubble Wrap FRS At Wal-Mart for under $ 20.00 and in this case they would actually work better the 3 Million Dollar Communications System and $ 2500 Mot HT

Sorry for the long Post but this Just Hit the wrong way .

If it 3 in the Morning and I call 911 I don't care what anyone uses as long as I get the Emergency Help I need

Ham Radio I put the Audio File in the Files section
Born Sept 4 1918 Died February 28, 2009, at the age of 90
May He Rest in Peace

73 De Don KA9QJG

Paul Harvey Plugs Ham Radio's Emergency Communications Role
Veteran ABC Radio Networks commentator Paul Harvey on March 19 offered some kind words for amateur radio. The mention was the second item on "page four" of his Paul Harvey Noon News and Comment program: "America's quiet warriors are the legion of ham radio operators, 700,000 of them, who are always at ready for backup duty in emergencies -- amateur, unpaid, uncelebrated, civilian radio operators, during and after floods and fires and tornadoes. After the 9/11 attacks, hams were indispensable in reuniting friends and families. Most recently it was they who expedited the search for debris after the disaster to the space shuttle Columbia, and right now, at this moment, they are involved in homeland security to a greater degree than you would want me to make public." The commentary's enigmatic and mysterious final sentence -- typical of Harvey's habit of leaving his listeners hanging -- apparently refers to the fact that many Amateur Radio Emergency Service (ARES) and Radio Amateur Emergency Service (RACES) teams have ramped up their alert status as hostilities get under way in the Middle East.

Reminder from: IndyHamRadio Yahoo! Group
http://groups.yahoo.com/group/IndyHamRadio/cal

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday March 5, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 3 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1833. Wanting to buy 2 meter handheld or duel band

Yahoo group: IndyHamRadio
Date: 2009-03-08 23:48:12 UTC
From: randy5504
Topic: 1833 Message: 1833

Hello my name Is Randy KC9ASH, I'm looking to get back into the swing of things. I don't have alot of money to spend on a expensive radio looking to buy a used handheld from someone that might have an extra one to sell.
So I can join a few of the radio groups in Indy and enjoy talking to other radio operators in Indy. So if anyone has anything they can email me at rc4855@aol.com or call me at 317-717-8508

Thanks
Randy
KC9ASH

RandL in Ohio sells this one for 94.95.

J175T ALINCO 2m 5W HANDHELD

That is a pretty low price.

I don't think you are a real ham until you have:

* Challenged someone to an antenna sword duel
* Used PVC in a project
* Held it together with duct tape
* Screwed it down with sheet rock screws

Hah!

Hey! I qualify then. You gotta have all those items in your go bag and a spare antenna for the one broken from sword-play.

1838. OT One of the original Voices of WWV Passed away

Yahoo group: IndyHamRadio
Date: 2009-03-09 22:39:43 UTC
From: Don
Topic: 1838 Message: 1838

FYI

One of the original Voices of WWV Passed away

Our Thoughts and prayers go out to the Family

73 De Don KA9QJG

The recorded voice of Time and Frequency Station WWV has fallen silent. This with word that announcer Don Elliot Heald, of Atlanta, Georgia, who gave WWV its human touch passed away on Thursday, February 19th.

Known in the broadcast world as Don Elliot, Heald had distinguished career that ranged from work at Atlanta Georgia's WSB to his automated and internationally heard WWV broadcasts on shortwave. He was also the voice of the Audichron telephone dial-in Time-Weather-Temperature service and of the Protestant Hour radio show for over 40 years. For nearly five decades Heald narrated the televised Christmas Eve service from Atlanta's Episcopal Cathedral of St. Philip, where he served as a vestryman, junior warden and senior warden.

Heald was originally from Massachusetts, but came to Atlanta via Lakeland, Florida. He was a graduate of the University of Florida at Gainesville and began his broadcast career after graduation when he accepted a position at WRUF where remained for three years. In Atlanta he spent much of his spare time devoted to public service work with charities and civic clubs.

A Service of Celebration of Don Elliot Heald's life took place on Tuesday February 24th at the Cathedral of St. Philip. He is survived by his wife Sara Farmer Heald of Atlanta, GA; sons and daughters-in- law David and Deborah of Ponte Vedra Beach, Florida, Tom and Evelyn Heald and Frank and Mary Heald of Atlanta. Don Elliot Heald was 86.

Tom, I'm here in Indy. I don't have a MMR_40, but I'll turn the power down on my Ten-Tec Jupiter if you want to try line of sight testing w/me.
At my home QTH, in NE Marion County I have a 2nd-floor indoor Slinky(tm) antenna. And at the "office" in NW Marion County, a 45 foot high Force 12 tribander, and a 80-meter inverted Vee that will tune for 40.

Dave,

Sounds good to me. When would be a good time for you. I'm thinking weekends, maybe in the next one or two I will be ready for on the air testing.

BTW if you go to "you tube" and type in my call (WD9GON) you should see the MMR40 bare board and digital dial readout working on the bench.

1846. Hello can someone help me

Yahoo group: IndyHamRadio
Date: 2009-03-14 08:29:00 UTC
From: anthonyison76
Topic: 1846 Message: 1846

Hello Everyone

I have been looking into getting started in ham radio.
I had a CB when I was a lot younger and enjoyed it somewhat. I just don't want to deal with all the hash and trash that's on CB. But my problem is I just don't know where to get started. I did know a guy with the call sign K9ZF Dan. But I have had no luck finding him or I just don't have the right email address. If anyone could help me out with some info that would be very nice. I am in Southern Indiana and would love to talk with someone that can send me off in the right way.
Thanks for your time .

Anthony

Hello Anthony,

A good place to start is ARRL.ORG. This should be able to direct you to a local club. I have found the hobby to be very rewarding through the years.

Information that I have found for K9ZF:

K9ZF

DANIEL L EVANS

5028 TUNNEL MILL ROAD

CHARLESTOWN, IN 47111

email: k9zf@...

It has never been easier than now to obtain a license and enjoy all aspects of the hobby.

Good Luck, Good DX and 73,

Dick W9FG

Subject: [IndyHamRadio] Hello can someone help me

Hello Everyone

I have been looking into getting started in ham radio.
I had a CB when I was a lot younger and enjoyed it somewhat. I just don't want to deal with all the hash and trash that's on CB. But my problem is I just don't know where to get started. I did know a guy with the call sign K9ZF Dan. But I have had no luck finding him or I just don't have the right email address. If anyone could help me out with some info that would be very nice. I am in Southern Indiana and would love to talk with someone that can send me off in the right way.
Thanks for your time .

Anthony

1850. Central Indiana Skywarn test net, Wednesday, March 17

Yahoo group: IndyHamRadio
Date: 2009-03-18 02:27:22 UTC
From: Bob Burns W9RXR
Topic: 1850 Message: 1850

I apologize in advance for cross-posting this information to multiple groups.

This is from the Indianapolis NWS web site:

"The National Weather Service, in conjunction with the Indiana State Police, the Indiana Department of Homeland Security, the Indiana Department of Education, the Indiana Broadcasters Association, the American Red Cross, and Amateur Radio Operators will conduct a statewide test of communication systems on Wednesday, March 18 between 10:00 AM and 10:30 AM EDT and between 7:00 PM and 7:30 PM EDT."

For those of you in Central Indiana, the Central Indiana Skywarn test net will be activated in conjunction with the statewide communications test. Hopefully, your county will be activating a county Skywarn test net at the same time. If you county net is active, please check in with your county net.

For more information about the repeater system used by Central Indiana Skywarn, check this link:

http://www.w9nws.org/node/16

For information about Central Indiana county Skywarn repeaters, check this link:

http://www.w9nws.org/repeater_map

Note: If you are aware of any errors in this repeater map, please let me know.

For more information about Severe Weather Preparedness Week, check these links to your local NWS office:

I botched the date in the subject line of my original post. The test net is Wednesday, March 18, 2009.

Not sure which NWS office covers your area. Here is a link to Indiana Severe Weather Preparedness Week information from the North Webster NWS office:

http://www.crh.noaa.gov/news/display_cmsstory.php?wfo=iwx&storyid=22662&source=0

And from the Chicago NWS office:

1856. Southern Indiana / Northern Kentucky 2 Meter SSB Net, 3/19/2009, 7:00 pm

Yahoo group: IndyHamRadio
Date: 2009-03-18 23:00:18 UTC
From: IndyHamRadio@yahoogroups.com
Topic: 1856 Message: 1856

Reminder from: IndyHamRadio Yahoo! Group
http://groups.yahoo.com/group/IndyHamRadio/cal

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday March 19, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 11 hours, 59 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

Columbus is a great, small, hamfest. Not many manufacturers but a great place to meet, greet and look at classic equipment and parts. In this day and age any hamfest is worth attending. You attendance helps keep this dying tradition alive. We hope to see you there.
73,
Jack w8ish
PS. The Mid-State ARC will have some classic radio equipment for sale. WE are also running a VE test session. It begins at 11AM.

Yes, it's not a big fest, but has a great "atmosphere".

I try to go every year. I don't have anything to put on the tail gate
this year, and not much money to spend, but I plan to drive up to visit
a bit anyway.

Date: 2009-03-25 23:47:38 UTC
From: IndyHamRadio@yahoogroups.com
Topic: 1867 Message: 1867

Reminder from: IndyHamRadio Yahoo! Group
http://groups.yahoo.com/group/IndyHamRadio/cal

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday March 26, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

Greetings all,

Just a friendly reminder for the 2m SSB net tomorrow night.

We are still meeting at 7:00pm local time, 23:00z, now that we are on daylight savings time. I would be willing to push this out an hour or two if it would work better for everyone. Now that spring is here, and summer just around the corner, we want to make the net schedule work with everyone as best we can. Would you prefer it to be later?

I would like to encourage everyone to make more contacts on 2m SSB. If you hear someone else on the net you would like to work, just let me know. I would be happy to standby while you call someone and move them up or down the band. Or stick around after the net and make your calls then. I'll help coordinate the contact, if you need me.

Is anyone actively collecting grid squares now? VUCC is a very challenging award offered by the ARRL. Check out:
http://www.arrl.org
for details.

I've also been giving thought to a 6 meter SSB net. Is anyone interested in a 6 meter net?

I'm planning to do a 2 meter FM Simplex net sometime soon, as well. However, I want to make some antenna improvements before I kick this off.

In the mean time, I'm making plans for the VHF spring sprints, a camping trip ./ portable expedition for the IN QSO Party in May, and it will soon be time to gear up for the June ARRL VHF QSO Party. And then Field Day!! So, what are you planning?

I would like to thank everyone for all of the encouragement and support I have received over the past few weeks on the net. It really makes it worthwhile. Now lets go make some contacts and stir up some activity:-)

1869. For Sale or Trade Listings

Yahoo group: IndyHamRadio
Date: 2009-03-26 00:30:35 UTC
From: Don West
Topic: 1869 Message: 1869

Hello Hoosier Hams,

We have not had a lot of Selling, Buying, or Trading here. Nevertheless, I added a new Yahoo feature to the group, For Sale or Trade.

If interested, from the home page, click the "Applications" link at the bottom of the left pane, and look for the For Sale link on that page.

Please keep the items of interest to Hams, but I do not have time to be the "For Sale Police, either".

73,
Don, W9DEW

Southern Indiana / Northern Kentucky 2 Meter SSB Net
Thursday March 26, 2009
7:00 pm - 8:00 pm
(This event repeats every week.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday, January 29, 2009 at 7:00 PM ET (00:00z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1874. Ham estate sale, Lafayette, IN, April 11, 2009.

Yahoo group: IndyHamRadio
Date: 2009-03-30 16:55:10 UTC
From: kc9brz
Topic: 1874 Message: 1874

Cross-posted from HDXCC group:

>from: "Tim Gardner" n9lf@...

Greetings all, Just an FYI:

Dr Bob Martin - W9YE (aka Doc Bob) passed away last summer. Bob was a collector, meaning he would buy almost anything radio related. He was especially fond of Collins equipment. Several Lafayette area hams are helping Bob wife Pat sell his radio equipment. To that end, Pat will be holding a "garage sale" on Saturday, April 11.

You will find below a list of the "cream of the crop" items. Anything remaining after the sale will go to eBay. Note that considerable work has already been done to establish fair market prices for your reference.

Contact me direct if you have any questions.

Tim - N9LF

The following Amateur Radio Equipment is for sale. All equipment is sold AS IS. NO Warranties are expressed or implied. Many pieces of equipment have not been turned on for an undetermined time. They have not been tested in order to preserve components, especially capacitors. All items are subject to prior sale. This is a partial listing of equipment - many smaller items are also available.

Terms: Cash or good check. All sales will be final.

Location: 519 Calvert Lane, Lafayette, IN. Calvert Lane is a "no outlet" street off of State Street in Lafayette. Driving south on 9th Street, make a partial left turn on to State Street at the top of South 9th Street hill, go about 2 blocks, and turn left on Calvert Lane. Driving west on Kossuth Street, just after 14th Street, make a partial right turn on to State Street, go about 3 blocks, and turn right on Calvert Lane.

Instruction books are available for many of these items.
Some of the rigs are "CONDITION UNKNOWN, BUT BELIEVED TO BE OPERATING." Asking prices are based, when possible, on recent sales of similar equipment on eBay or other sources.

Current retail prices are indicated in some cases to provide a basis for an offer.

If a current used market price is not available, please make a fair offer.

Alinco
Alinco DJ-C7 Handheld vhf transceiver, e8ay $60

Alpha Delta
Alpha Delta Delta 2 coax switch, e8ay $49
Alpha Delta Delta 4 coax switch, e8ay $58

1875. Indiana & Kentucky area 2 meter SSB net news

Yahoo group: IndyHamRadio
Date: 2009-04-01 03:11:15 UTC
From: Dan Evans
Topic: 1875 Message: 1875

Greeting group,

I look forward to hearing everyone this Thursday evening, 4/2/2009, 7:00pm local, 23:00z, on 144.250 USB for the 2m SSB net.

Band conditions have been pretty good for the last few days, so I'm hoping for a good turn out.

I also want to point out the spring months are great times for VHF operators. Tropo conditions tend to be good, and 6 meter e-skip season will get underway soon. To go with this, the annual 2 meter Spring Sprint is next Monday, 4/6/09, LOCAL time, 7pm to 11pm. Let's all get on and show some mid-west activity! You can find more info here:

http://groups.google.com/group/springsprints/web/2009-announcement-rules

I would also like to announce we have come to a pretty good agreement. Most of the 2m SSB net participants would like to move the time a little later for the summer / day light savings time, hours. I think a good compromise time for this will be 8:30pm local time, or 00:30z. So starting with the 4 / 7 / 2009 net, the new time will be 8:30pm local, 00:30z. This is Thursday evening 8:30pm local time, which is the same as Friday morning, 00:30 Universal Time. Please help me pass the word around about the time change.

Also, there has been a lot of interest in starting a new 6 meter net, and a 2 meter FM simplex net! I plan to get these started, however, I really need to make some station improvements before I try to kick these off. Currently my little 3 element yagi for 6 meters is only 20 feet off the ground, and my only 2 meter FM antenna is a 4 element yagi at 28 feet. I'm planning to add twenty more feet of tower this spring, and a good 2 meter vertical, which should be a huge improvement. As soon as I can make these changes I'll try to kick off the new nets.

Now, if we can just get the auto industry back on it's feet so I can afford to buy concrete....

Anyone out there I can run a basic test on 2 m ssb
prior to net possibly from Columbia City, Whitley
county Indiana? Grid EN71GF.

Are we operating USB mode - been so long I forgot?

Am running an old Kenwood 9130 into a low 7 el
beam only up @ about 15 feet at the moment. So
may need to run my RIT a bit, also may see if my
old CW key works.

Thanks for any help...

element yagi at 28 feet. I'm planning to add twenty more feet of tower
this spring, and a good 2 meter vertical, which should be a huge
improvement. As soon as I can make these changes I'll try to kick off
the new nets.

Now, if we can just get the auto industry back on it's feet so I can
afford to buy concrete....

1880. No net tonight

Yahoo group: IndyHamRadio
Date: 2009-04-02 22:20:17 UTC
From: Dan Evans
Topic: 1880 Message: 1880

Sorry folks, have some strong storms in the area tonight. Doesn't look like they are going to let up anytime soon, so I'm going to throw in the towel for today.

If the skies are clear in your area, feel free to get on and make some contacts without me. Better yet, see how many calls and grids you can collect and send me a report!

Also, please remember next week the net will be Thursday evening, 4/9/2009, at 8:30pm local time. That will be 00:30z.

Have fun,

73

1884. New time for the IN/KY 2M SSB Net, 00:30z!

Yahoo group: IndyHamRadio
Date: 2009-04-08 10:07:31 UTC
From: Dan Evans
Topic: 1884 Message: 1884

Greeting group,

I look forward to hearing everyone this Thursday evening, 4/9/2009, 8:30pm local, 00:30z, on 144.250 USB for the 2m SSB net.

Band conditions have been pretty good for the last few days, so I'm hoping for a good turn out.

I spent a couple of hours Monday evening playing in the 2m Spring Sprint. I didn't make a lot of contacts, but it was good to hear some old friends. The spring sprints always get me motivated to get ready for the June VHF QSO Party! Next week, the 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 14, 2009.

http://groups.google.com/group/springsprints/web/2009-announcement-rules

I would also like to announce we have come to a pretty good agreement. Most of the 2m SSB net participants would like to move the time a little later for the summer / day light savings time, hours. I think a good compromise time for this will be 8:30pm local time, or 00:30z. So starting with the _*4 / 9 / 2009*_ net, the new time will be 8:30pm local, 00:30z. This is Thursday evening 8:30pm local time, which is the same as Friday morning, 00:30 Universal Time. /*Please help me pass the word around about the time change.

*/Also, there has been a lot of interest in starting a new 6 meter net, and a 2 meter FM simplex net! I plan to get these started, however, I really need to make some station improvements before I try to kick these off. Currently my little 3 element yagi for 6 meters is only 20 feet off the ground, and my only 2 meter FM antenna is a 4 element yagi at 28 feet. I'm planning to add twenty more feet of tower this spring, and a good 2 meter vertical, which should be a huge improvement. As soon as I can make these changes I'll try to kick off the new nets.

Now, if we can just get the auto industry back on it's feet so I can afford to buy concrete....

Indiana / Kentucky 2 Meter SSB Net
Thursday April 9, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1891. Re: [IndyHamRadio] Re: Indiana / Kentucky 2 Meter SSB Net, 4/9/2009, 8:30 pm

Yahoo group: IndyHamRadio
Date: 2009-04-10 23:26:55 UTC
From: Dan Evans
Topic: 1886 Message: 1891

Hi Brad,
That is what we are trying to fix:-) Activity breeds more activity, so
if the net can get the ball rolling everyone will have more fun.

As to six meters, not yet but we are working on it. I'm planning to add
a 6 meter net, and a 2 meter FM simplex net later this spring. I need
to do some antenna improvements before I kick these off. My small
antennas and 20 foot tower just isn't enough to get these nets rolling.
But I have 20 more feet of tower to go up, and hopefully some bigger
yagis, within the next few months. Just hoping the auto market will
improve soon so I can afford to buy concrete!!!

Looking forward to hearing you on the net/s,

73

1896. K9ZF, Crazy Dan, the contest guy is at it again

Yahoo group: IndyHamRadio
Date: 2009-04-12 06:12:33 UTC
From: Dan Evans
Topic: 1896 Message: 1896

Hello!

The Indiana QSO Party is coming up *Saturday May 2, 2009. And I'm making plans for a portable expedition :-)
Yes, I know it's Derby day, but I'm not much into horse racing anyway, hi hi.

All of the details for the Indiana QSO Party:
http://hdxcc.org/inqp/index.html

Here is the plan, so far. I'm going to take my camping gear to a hilltop on the county line of Washington and Scott county, near Leota. I'll also be bringing along my Yaesu FT897D, a laptop for logging and keying, and at least 2 deep cycle batteries for power. [more if I can find some to borrow:-)]

Last week I made 3 wire dipoles for portable use. One for 75 meters, one for 40 meters, and one for 20. Luckily, I have a big spool of 20awg wire :-) I was planning to use my LDG Z11pro tuner to cover the rest of the HF bands, but Murphy has stricken already and it seems to have died. So I will have to be happy with those three bands unless I can bum another tuner. I plan to use my bow, or fishing pole, to launch some twine up into the tree tops to pull up the wire antennas. Luckily the camp site has a lot of big hard wood trees to support my antennas :-)

So here is the plan. I am going to head up to the hilltop Saturday morning. Setup my camp, and get the antennas up and the station running by noon, when the contest starts. The contest will run until midnight. So I will run the whole 12 hours of contest, and then hit the sleeping bag. Sunday morning I will pack it all in and head for home.

The main idea for the Indiana QSO Party is to work as many Indiana, and other stations as possible. Unfortunately, most of the counties are only activated by mobiles, but it is a lot of fun trying to track the mobiles as they move from county to county. But it sure would be nice if we could get more home stations involved. At the same time as the INQP there is also the New England QSO Party, and the 7th call area QSO party. Both of these QSO Parties have lots of stations active and really help boost the counts for us Indiana stations.

Does this sound like fun to you? Well grab your sleeping bag and come along!

Do you have a favorite hilltop of your own? Go for it, I love competition! All of my equipment is junk and homebrew, show me what you can do with yours :-) But fair warning, I play to win, so bring your A game, hi hi. BTW, this is great practice for Field Day. When is the

last time your ARES / RACES group had a drill?

Does all of this sound like too much work? No problem, just fire up
that home station and dive in.

Got a couple of friends that are interested? Then have a multi-op party
with the QSO Party :-)

Or put that club station on the air and show everyone what your club
station can do! There is a club competition within the INQP, so if I
can get a couple more guys from the Clark county group to get on, we can
enter the club competition.

It's fun! Get on the air and make some noise :-)

Now if I could just talk the guys at the Hoosier DX and Contesting Club
into adding my favorite VHF bands to the mix...
*

73 and have fun!!

Indiana / Kentucky 2 Meter SSB Net
Thursday April 16, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

Sent: Apr 17, 2009 5:22 AM
To: tapr-announce@...
Subject: [tapr-announce] Reminder: Sign up now for the 2009 TAPR/AMSAT Banquet at Dayton Hamvention

2009 TAPR/AMSAT Banquet at Dayton Hamvention

The third annual joint TAPR/AMSAT Banquet will be held Friday evening, May 15, 2008 during the Dayton Hamvention.

The Banquet will be in the Jefferson Room at the Kohler Presidential Banquet Center, Kettering, OH (just south of Dayton).

Reservations are required and must be made by Monday, 11 May 2009. Seating is limited, so make your reservations early.

TICKETS WILL *NOT* BE AVAILABLE AT HAMVENTION; YOU *MUST* REGISTER IN ADVANCE!

The price for the Banquet is $30 per person. Reserved tickets may be picked up at the AMSAT booth at Hamvention on Friday, or at the door.

You may make reservations for the 2009 TAPR/AMSAT Banquet online in the AMSAT Store or contact Martha at the AMSAT office. You can reach Martha from 10:00 AM to 6:00 PM EST/EDT at (301) 589-6062, or in the US toll free at (888) 322-6728.

For additional information contact Martha at the AMSAT office (martha@...).

6:30 PM Doors open and Cash bar is available with Beer, Wine, Liquor and soft drinks.

7:15 PM Buffet Dinner service begins. The Center has a justly deserved reputation for good food and service.

1904. Dayton Forum Schedule Announced

Yahoo group: IndyHamRadio
Date: 2009-04-21 01:20:17 UTC
From: Mark Thompson
Topic: 1904 Message: 1904

==> FORUM SCHEDULE ANNOUNCED FOR 2009 DAYTON HAMVENTION

One of the many highlights at Dayton Hamvention is the myriad of educational and fun forums that take place the entire weekend at Hara Arena. The Dayton Amateur Radio Association has coordinated 45 unique programs that encompass nearly 80 hours of programs and activities for the thousands of people expected to attend these programs. Hamvention, the largest event of its kind, will be May 15-17 at Hara Arena in Dayton, Ohio. Please keep in mind that the schedule may change before Hamvention.

Friday, May 15
9:15-11:15 -- TAPR Digital Forum (Room 1)
9:15-10:15 -- Engineering Manuals (Room 2)
9:15-10:15 -- Kit Building (Room 3)
9:15-10:15 -- QRP (Room 5)
10:30-12 -- Drake Forum (Room 2)
10:30-12 - Teachers Workshop (Room 3)
10:30-11:30 -- ARRL Field Day (Room 5)
11:30-12:30 -- APRS Forum (Room 1)
11:45-12:45 -- QSL Cards (Room 5)
12:15-1:15 -- ARRL, The Doctor Is IN (Room 2)
12:15-2 -- Ham Radio and the Law (Room 3)
12:45-2:15 -- D-STAR Forum (Room 1)
1-2:15 -- Alternative Energy Forum (Room 5)
1:30-2:30 -- ARRL, Public Relations (Room 2)
2:15-3:30 -- Gordon West (Room 3)
2:30-5 -- Antenna Forum (Room 1)
2:30-5 -- Software defined Radio (Room 5)
2:45-3:45 -- Foxhunting Forum (Room 2)
3:45-5 -- Techniques of the Best Operators (Room 3)
4-5 -- County Hunting Forum (Room 2)

Saturday, May 16
9:15-11:15 -- Contesting Forum (Room 1)
9:15-10:15 -- SATERN Forum (Room 2)
9:15-10:15 - Lightning Grounding Forum (Room 3)
9:15-11:00 - VHF/UHF/Microwave Forum (Room 5)
10:30-11:30 -- ARRL Members Forum (Room 2)
10:30-11:45 -- Heil Sound (Room 3)
11:15-1:30 -- AMSAT Forum (Room 5)
11:30-1:15 -- Youth Forum (Room 1)
11:45-2 -- Newsline Town Meeting (Room 2)
12-1 -- RTTY Forum (Room 3)
1:15-2:15 -- ARRL, Digital Contesting (Room 3)
1:30-2:30 - ARRL Presents Richard Garriott, W5KWQ (Room 1)
1:45-3 -- SSTV Forum (Room 5)

2:15-3:15 -- FCC Forum (Room 2)
2:30-3:30 -- ARES Forum (Room 3)
2:45-5 -- DX Forum (Room 1)
3:15-5 -- MARS Forum (Room 5)
3:30-5 -- ATV Forum (Room 2)
3:45-5 -- Collins Forum (Room 3)

Sunday, May 17
9:15-10:15 -- Red Cross Forum (Room 1)
9:15-11 -- QCWA Forum (Room 2)
9:15-10:15 -- Volunteers and EmComm Forum (Room 3)
9:30-11:15 - Bicycle Mobile Forum (Room 5)
10:30-11:30 - When All Else Fails, South Carolina Is Ready (Room 1)

For more information on forums at the 2009 Dayton Hamvention, please visit the Dayton Hamvention Web site <http://hamvention.org/forums.php>.

1906. The United States Navy -- the Great Communicator to the World

Yahoo group: IndyHamRadio
Date: 2009-04-22 13:39:50 UTC
From: n9nwo
Topic: 1906 Message: 1906

A most interesting article about ingenuity and availability. The former wins the race for availability every time. Now the interesting question. Could not a country use this vehicle for Communications Operations Attacks (gotta be a better name for it) on our forces, spoofing our own radio shacks?

Could it be the AQ or others be using such tools to talk to each other?

---

The Great Brazilian Sat-Hack Crackdown
By Marcelo Soares 04.20.09

Brazilian satellite hackers use high-performance antennas and homebrew gear to turn U.S. Navy satellites into their personal CB radios.

Photo: Divulgação/Polícia Federal

CAMPINAS, Brazil ☐ On the night of March 8, cruising 22,000 miles above the Earth, U.S. Navy communications satellite FLTSAT-8 suddenly erupted with illicit activity. Jubilant voices and anthems crowded the channel on a junkyard's worth of homemade gear from across vast and silent stretches of the Amazon: Ronaldo, a Brazilian soccer idol, had just scored his first goal with the Corinthians.

It was a party that won't soon be forgotten. Ten days later, Brazilian Federal Police swooped in on 39 suspects in six states in the largest crackdown to date on a growing problem here: illegal hijacking of U.S. military satellite transponders.

"This had been happening for more than five years," says Celso Campos, of the Brazilian Federal Police. "Since the communication channel was open, not encrypted, lots of people used it to talk to each other."

The practice is so entrenched, and the knowledge and tools so widely available, few believe the campaign to stamp it out will be quick or easy.

Much of this country's geography is remote, and beyond the reach of cellphone coverage, making American satellites an ideal, if illegal, communications option. The problem goes back more than a decade, to the mid-1990s, when Brazilian radio technicians discovered they could jump on the UHF frequencies dedicated to satellites in the Navy's Fleet Satellite Communication system, or FLTSATCOM. They've been at it ever since.

Truck drivers love the birds because they provide better range and sound than ham radios. Rogue loggers in the Amazon use the satellites to transmit coded warnings when authorities threaten to close in. Drug dealers and organized criminal factions use them to coordinate operations.

Today, the satellites, which pirates called "Bolinha" or "little ball," are a national phenomenon.

"It's impossible not to find equipment like this when we catch an organized crime gang," says a police officer involved in last month's action.

The crackdown, called "Operation Satellite," was Brazil's first large-scale enforcement against the problem. Police followed coordinates provided by the U.S. Department of Defense and confirmed by Anatel, Brazil's FCC. Among those charged were university professors, electricians, truckers and farmers, the police say. The suspects face up to four years and jail, but are more likely to be fined if convicted.

First lofted into orbit in the 1970s, the FLTSATCOM bird was at the time a major advance in military communications. Their 23 channels were used by every branch of the U.S. armed forces and the White House for encrypted data and voice, typically from portable ground units that could be quickly unpacked and put to use on the battlefield.

As the original FLTSAT constellation of four satellites fell out of service, the Navy launched a more advanced UFO satellite (for Ultra High Frequency Follow-On) to replace them. Today, there are two FLTSAT and eight UFO birds in geosynchronous orbit. Navy contractors are working on a next-generation system called Mobile User Objective System beginning in September 2009.

Until then, the military is still using aging FLTSAT and UFO satellites ☐ and so are a lot of Brazilians. While the technology on the transponders still dates from the 1970s, radio sets back on Earth have only improved and plummeted in cost ☐ opening a cheap, efficient and illegal backdoor.

To use the satellite, pirates typically take an ordinary ham radio transmitter, which operates in the 144- to 148-MHZ range, and add a frequency doubler cobbled from coils and a varactor diode. That lets the radio stretch into the lower end of FLTSATCOM's 292- to 317-MHz uplink range. All the gear can be bought near any truck stop for less than $500. Ads on specialized websites offer to perform the conversion for less than $100. Taught the ropes, even rough electricians can make Bolinha-ware.

"I saw it more than once in truck repair shops," says amateur radio operator Adinei Brochi (PY2ADN) "Nearly illiterate men rigged a radio in less than one minute, rolling wire on a coil."

Brochi, who assembled his first radio set from spare parts at 12, has been tracking the Brazilian satellite hacking problem (.pdf) for years.

Brochi says the Pentagon's concerns are obvious.

"If a soldier is shot in an ambush, the first thing he will think of doing will be to send a help request over the radio," observes Brochi. "What if he's trying to call for help and two truckers are discussing soccer? In an emergency, that soldier won't be able to remember quickly how to change the radio programming to look for a frequency that's not saturated."

When real criminals use these frequencies, it's easy to tell they're hiding something, but it's nearly impossible to know what it is. In one intercepted conversation posted to YouTube, a man alerts a friend that he should watch out, because things are getting "crispy" and "strong winds" are on their way.

Sometimes loggers refer to the approach of authorities by saying, "Santa Claus is coming," says Brochi.

When the user's location is stable, the signal can be triangulated. That's how the Defense Department got the coordinates to feed Brazilian authorities in March's raids.

While Brazil may be the world capital of FLTSATCOM hijacking, there have been cases in other countries ☐ even in the United States. In February of last year, FCC investigators used a mobile direction-finding vehicle to trace rogue transmissions to a Brazilian immigrant in New Jersey. When the investigators inspected his radio gear, they found a transceiver programmed to a FLTSAT frequency, connected to an antenna in the back of his house. Joaquim Barbosa was hit with a $20,000 fine.

A technician with Anatel, speaking on condition of anonymity, says the chief problem with ending the satellite abuse in this country is that U.S. and Brazilian authorities simply waited too long to start. Thousands of users are believed to have the know-how to use the system. After a bust, the airwaves always go quiet for a while, but the hijackers always return.

One week after the "Operation Satellite," Brochi met with Wired.com at a gathering of amateur radio enthusiasts in a bucolic square in Campinas, about 60 miles north of Sao Paulo. Brochi switches on his UHF receiver and scans through the satellite frequencies.

It's relatively quiet now on the satellite underground, except for the static-like sound of encrypted military traffic. But eventually, a lone creaky voice cuts through. It's a man in Porto Velho, the capital of Rondônia, a day's drive north into the upper Amazon basin. He's making small talk with a friend in Portuguese. The satellite pirates are creeping back on the air.

Amateur radio operators, of which I am one, have been uses similar technology for decades. A satellite transponder has an uplink range of frequencies which are rebroadcasted on another set of frequencies. Since military tactical satellite frequencies (which are in the same area as military aviation) in the 200 to 400 MHz band, it is not all that hard. Now there are other frequencies for satellites around 2 GHz and 5 GHz. Military air and TACSAT frequencies are right in the middle of the most common amateur radio VHF and UHF bands which are also used for amateur satellites (generally uplink on 440 MHz and downlink on 144 MHz bands).

The question is why commercial satellite transponders are not being hacked. It could be that they are at 1800 to 2200 MHz or above 5 GHz. Or they have some form of password protection that limits uplinking. That the hackers can use TACSAT transponders is bad enough. However this also means that anyone with with a high power transmitter (at least 100 Watts) and a high gain antenna could overload the uplink frequencies thus putting the transponder out of commission.

Back in WW2 the typical US soldier was a farm boy who was used to improvising equipment. Now so many new troops have never had to make anything and tend to be fearful of those who can can think out of the box. In much of the world there still are those who can do "farm boy engineering".

The real problem is the growing use of amateur radio equipment for illegal communictions. At what point would governments start banning amateur radio like they now do guns?

Indiana / Kentucky 2 Meter SSB Net
Thursday April 23, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1911. Flex-Radio Systems SDR-1000 Software Defined HF Transceiver For Sale

Yahoo group: IndyHamRadio
Date: 2009-04-23 13:26:15 UTC
From: Ray Andrews
Topic: 1892 Message: 1911

I have a FlexRadio Systems SDR-1000 software-defined HF transceiver for sale. Unit is in excellent condition (no scratches, mods, etc.) and was shipped new from factory in January 2006. Radio has been sitting on shelf since I received my FLEX-5000A in November 2007. Was working perfectly when taken out of service.

System includes:

SDR-1000 Software-Defined Transceiver (TX: 160m - 6m, RX: 12 kHz - 60 MHz)

100 Watt PA (160m - 10m, 0.5 Watt on 6m)

Internal ATU (160m - 6m)

M-Audio Delta 44 sound card w/cables

KB9YIG Interface for Delta 44

All software, drivers, manuals, etc.

ATU shield plate ECO has been installed.

Asking price: $1200.00 including shipping (price is somewhat negotiable)

If you have any questions, e-mail me at k9dur@... or tx me at 812-236-6522.

NOTE: The SDR-1000 makes an excellent IF for VHF/UHF transverters. There are provisions built into the PowerSDR software to seamlessly support/control external transverters. By itself, the SDR-1000 requires a preamp for 6m receive in addition to an external PA to get past the 0.5W output.

73, Ray, K9DUR

1912. NE Indiana Packet Net Day/Time Change

Yahoo group: IndyHamRadio
Date: 2009-04-25 08:54:38 UTC
From: Dan
Topic: 1912 Message: 1912

Day: Sundays
Time: 9:00 pm - 9:30 pm

This is an informal net that is held every Sunday at 9PM EDT on 145.530 @ 1200 baud. We use unconnected converse mode to communicate for a roundtable net setting. Use your "UNPROTO" command or equivalent to setup a Digi path through the nearest high profile station to you. Only use those that are necessary! Use the list below to help you determine which one to use. Have all your "Monitor" settings on so you can see everyone.

We are utilizing the capabilities of the KA9LCF BBS on 145.050 20W@115' and KA9LCF-6 Node in Auburn on 145.530 is 40W@300'.

These stations are all on 145.530 @ 1200 Baud

Adams Co. Use W9INX-1 Node
Allen Co. Use ACARTS W9INX-1 Node 50W@?'
Dekalb Co. Use KA9LCF-6 Node 40W@300'
Elkhart Co. Use N9BAV-7 Node @ GARC ?W@85'
Huntington Co. Use one of three: KC9ANF-8 or KB9LDZ-8 or W9INX-1
Kosciusko Co. Use HLRC Digi K9CWD @ KCEOC 50W@?'
LaGrange Co. Use KA9LCF-6 Node or N9BAV-7 Node
Miami Co. Use KF9NU-8 Digi @ MCEOC 40W@150'
Noble Co. Use either KA9LCF-6 Node or KC9ANF-8 Digi
Steuben Co. Use KA9LCF-6 Node
Wabash Co. Use WCARC Digi KB9LDZ-8 40W@120'
Wells Co. Use W9INX-1 Node
Whitley Co. Use WCRACES Digi KC9ANF-8 @ WCEOC 50W@140'

If you need further information contact:

1926. IN / KY 2 meter SSB net, Thursday evening, 00:30z, 144.250 USB

Yahoo group: IndyHamRadio
Date: 2009-05-13 23:19:02 UTC
From: Dan Evans
Topic: 1926 Message: 1926

Hello group,

Just a quick note to remind everyone of the IN / KY 2 meter SSB net.
Every Thursday evening, 8:30pm local, 00:30z, 144.250 USB.

Band conditions were a little flat last week, so I'm hoping to do better this week.

Also, there are many up coming events! Dayton hamvention is this weekend:-) I can't go this year, my daughter's dance recital is Saturday, but I hope everyone has a good time. Don't forget the rain gear, you never know what to expect at Dayton! Is anyone traveling up I65 or I75 to Dayton Thursday evening? Would love to get some mobile check ins to the 2m SSB net!

In just a few more weeks is the ARRL June VHF QSO Party!!! This is my favorite contest:-) 6 meters usually has some great openings, the weather is normally very nice for a Rover trip, and we typically have good activity levels. This is the big event of the year for me. I like to work the July CQ-VHF, the September VHF, and even the January VHF Sweepstakes, but the June VHF is the "Super Bowl" for me. This year I'm planning to operate from at least 8 grids. Tentatively, I'm planning to start in EM67 and EM77 just south of Louisville. Then head up to EM68 and EM78 in the Henryville and Salem, IN, areas Saturday evening. Early Sunday morning I'm heading up north. Just north of Indianapolis are grids EN60 and EN70. After that I will start working my way back south and pick up EM69 and EM79, likely Sunday afternoon.

That's 8 grid squares over the weekend, still allowing for being home Saturday night for a few hours sleep:-) I won't be able to stay long in each grid, probably just an hour or two, but it should be a load of fun! I'll send out a better game plan when the contest gets closer.

Now here's a challenge: If you have checked into the nets before, you know my setup. On 2m, I run 160 watts to 10 elements at 25'. Not much of a station, right? Now here is the kicker; this is the same station I use for my Rover! So, when I'm Roving, I stop, push up the yagis, and I have 160 watts to 10 elements at around 25'! Normally from a hilltop location! The point being if you have checked into the net, you can likely work me in the contest! How many grids can you catch me in? I'm planning a special QSL card for this Rover trip, and I would like to send out as many of them as possible!

For more info on the June VHF contest, check out:
http://www.arrl.org/contests/rules/2009/june-vhf.html

Want to learn a little more about VHF Contesting? Check out Todd's web page for a very nice write up:
http://kc9bqa.com/

Also, Marshall, K5QE, and Paul, ND2X, have done a great job with the VHF South web page. Check out:
http://www.vhfsouth.org/index.htm

That's it for this week. Hope to hear everyone on the net,

73

Indiana / Kentucky 2 Meter SSB Net
Thursday May 14, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1930. Field Day locator (ARRL)

Yahoo group: IndyHamRadio
Date: 2009-05-19 19:36:26 UTC
From: n9nwo
Topic: 1930 Message: 1930

FYI

The ARRL has a Field Day locator for club and other major stations. This is so that the public can visit our sites.
http://www.arrl.org/contests/announcements/fd/locator.php

Also this was posted in response to my article on EHam.net (Digital Modes for Field Day). Thought that it was a good encapsulation of what Field is all about......

Some folks think Field Day is one form of emergency preparedness. Some feel it is fun and games. Some view it strictly as a contest! Others feel it is the camaraderie, and a few say it's for the food. Well, guys, it's all of these!

Obviously, it depends on your point of view what's the best approach. It can be an orange vest, a bigger beer gut, or anything in between. Just make out of it what you will.

1938. Indianapolis Weather radio: 162.550

Yahoo group: IndyHamRadio
Date: 2009-05-25 15:02:46 UTC
From: kc9brz
Topic: 1938 Message: 1938

One of the local Indianapolis repeaters mentioned that
a severe weather warning was active, so I turned to 162.550.

Flash flood warning is in effect for Shelby county until
12:15 pm today (Monday May 25th, 2009).

Also for Monday, May 25, 2009, from www.wunderground.com :

... The urban and small stream flood advisory remains in effect until
100 PM EDT for northeastern Bartholomew... west central Decatur...
Johnson... Shelby and Marion counties...

Since many 2-meter rigs are programmable for the weather frequencies,
here are the Indiana freqs:

162.450 - Bloomington(I)
162.550 - Evansville
162.550 - Fort Wayne
162.550 - Indianapolis
162.475 - Lafayette
162.400 - South Bend
162.400 - Terre Haute

Note the shared freqs if you drive state-wide.

National freqs:
http://www.fordyce.org/scanning/scanning_info/nws_list.html

Indiana / Kentucky 2 Meter SSB Net
Thursday May 28, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1944. CS VHF Conference, 7/23-26, Elk Grove Village, IL

Yahoo group: IndyHamRadio
Date: 2009-06-02 18:01:45 UTC
From: Mark Thompson
Topic: 1944 Message: 1944

CS VHF Conference Web Site
http://www.csvhfs.org/conference/index.html

-----Original Message-----
From: kboston6@... [mailto:kboston6@...m]
Sent: Tuesday, June 02, 2009 12:01 AM
Subject: VHF conference, pse pass to your members

Hello all Radio Amateurs;

I just want to extend an invitation to you to come to the suburbs of Chicago for the 43rd annual Central States VHF society's annual conference. If you have any interest in the VHF and UHF weak signal activities, this gathering is for you. This year the conference is being held at the Elk Grove Village Holiday Inn, on Busse Road in the village of Elk Grove, Illinois, on the dates of July 23 through the 26th. (This is the motel where the annual W9DXCC conference has been held, and the recent TAPR meeting last summer)

The conference starts with registration on thursday evening, with a social gathering, and extends through friday, with antenna measuring, preamp measuring and talks/seminars. Saturday, the seminars continue, and a banquet and prize drawing are featured saturday night.. Other features include a dealer display, of VHF/UHF goodies, flea market, family program with tours of famous Chicago attractions, rover and antenna displays, and lots of socializing with familiar voices, so you can put a voice with a face.

Much more detailed information on this years conference can be found at the website; http://www.csvhfs.org, including links to the motel for those who plan to stay the duration, and a link to an online registration page for conference registration. Many in the Chicagoland area may opt just to attend for the day on Saturday, but come and join us for the entire weekend if you can.

For more information, you can contact me here, at the address in the header, or please send an email to Kermit W9XA, who is this years president and organizer.. He can be reached at w9xa@...

Thanks for considering;

Ken Boston W9GA
Promotions; Central States VHF society

1947. ARRL June VHF QSO Party, June 13 - 15

Yahoo group: IndyHamRadio
Date: 2009-06-05 18:11:21 UTC
From: Mark Thompson
Topic: 1947 Message: 1947

http://www.arrl.org/contests/rules/2009/june-vhf.html

2009 ARRL June VHF QSO Party Rules
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 13-15, 2009).
3. Entry Categories:
1. 3.1 Single Operator.
1. 3..1.1. Low Power
2. 3.1.2. High Power
2. 3.2 Single Operator Portable.
3. 3.3 Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
5. 3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
6. Please see “General Rules For All ARRL Contests Above 30 MHz for more information on the Rover categories.

1. 3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.
7. 3.6. Multioperator:
1. 3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
2.. 3.6.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of signal report is optional.
5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count three points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
4. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
1. 6.1. Entries may be submitted as follows:
1. 6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...
2. 6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.
3. 6.1.3. Web entries submitted via the web-based applet at: http://www.b4h.net/cabforms/
2. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.
3. 6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 15, 2009. Late logs may be designated as checklogs only.
7. Miscellaneous:
1. 7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 7.2. Only permitted one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
3. 7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
4. 7.4. Forms may be obtained by:
1. 7.4.1. Downloading from the Internet at the Contest Branch Website: http://www.arrl.org/contests/forms.
2. 7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.
8. Awards: Certificates will be awarded in the following categories:
1. 8.1. Single operator.
1. 8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.

2. 8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
2. 8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)
3. 8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
4. 8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
5. 8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
6. 8.6. Plaques, if sponsored, will be awarded in the following categories:
1. 8.6.1. Top 10 Single Operator (both High and Low Power) scorers.
2. 8.6.2. Top 5 Single Operator Portable scorers.
3. 8.6.3. Top 5 Rover, Limited Rover and Unlimited Rover scorers.
4. 8.6.4. Top 10 Multi-Operator scorers.
5. 8.6.5. Top 5 Limited Multi-Operator scorers.
9. Other:
1. 9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)" at www.arrl.org/contests/forms
2. 9.2. For more information, queries or questions contact contests@... or (860) 594-0232.

From: Zack Widup
Topic: 1947 Message: 1948

Are you going to be active in the contest, Mark? I'll take all the QSO's I can get!

I plan on being on my favorite hill in EN50rl with all bands from 50 through 10368 MHz. I just finished building new LNA preamps for 903 and 1296 which I hope to try out tomorrow on MAD so I'll know before the contest that they're working. Also got a new dish for the microwave bands.

73, Zack W9SZ

1954. Indy experimenters?

Yahoo group: IndyHamRadio
Date: 2009-06-08 03:58:09 UTC
From: Brad Knapp, K9MHZ
Topic: 1954 Message: 1954

Hey guys!

Say, are there any experimenters in Indy.....I'm thinking of 2.4 GHz wifi transceiving on the ham portion of the band, stuff like that. There's a nice source for some gear adapted from home wireless products, but of course you'd need some other people to communicate with.

Thanks!

Brad, K9MHZ
Carmel

From: Zack Widup
Topic: 1954 Message: 1955

I'm a little to the west (Urbana, IL) but I'm active on all microwave bands through 10 GHz. I do weak-signal work, however (CW, SSB). I think converting commercial equipment to work as weak-signal equipment is probably more trouble than it's worth and you're better off building from scratch for that approach.

I have worked people in Indy on 2304 before, though.

1957. Lafayette Field Day

Yahoo group: IndyHamRadio
Date: 2009-06-08 14:36:20 UTC
From: n9nwo
Topic: 1957 Message: 1957

The Tippecanoe Amateur Radio Association, W9REG, will be at Murdock Park (18th St and Ferry St) for Field Day.

You can find it by using the Field Day Locator.
http://www.arrl.org/contests/announcements/fd/locator.php
Enter W9REG in the text box and click the search button.
You should get a nice map that shows the location.

Thanks, Zack and Brian.

Zack, that sounds intriguing....if it's OK, I'd like to contact you offline and find out more about it. I do have an IC-910H with the 1296 module, but it sounds like I'd need to do some transverting(?)

Cheers,

Brad Knapp

1959. Repeater building available

Yahoo group: IndyHamRadio
Date: 2009-06-10 21:38:05 UTC
From: Charlie - N9MEW
Topic: 1959 Message: 1959

I may have a 8' x 8' x 8' building available. It would make a good repeater building.
It is in the Indianapolis area.
It is about 15 years old. It will be free, as is, where is. It was brought into the site via a flatbed truck.
It is self contained, and sets on 4 concrete blocks.

If you are interested, Please contact me directly, via email.. Not through the news group.

1961. Indiana / Kentucky 2 Meter SSB Net, 6/11/2009, 8:30 pm

Yahoo group: IndyHamRadio
Date: 2009-06-11 00:27:16 UTC
From: IndyHamRadio@yahoogroups.com
Topic: 1961 Message: 1961

Reminder from: IndyHamRadio Yahoo! Group
http://groups.yahoo.com/group/IndyHamRadio/cal

Indiana / Kentucky 2 Meter SSB Net
Thursday June 11, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 4 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1964. No IN/KY 2M SSB Net tonight

Yahoo group: IndyHamRadio
Date: 2009-06-11 21:27:50 UTC
From: Dan Evans
Topic: 1964 Message: 1964

Good evening group,

I'm sorry, but I'm going to have to pull out of tonight's net. Several times in the past few weeks I haven't been able to run the net. I'm sorry, but sometimes "stuff" happens.

My problem this week is I have most of my home station taken apart. This weekend is the big ARRL June VHF QSO Party, so I have most of my gear pulled from my home station and am in the process of rigging up the Rover station. Normally this wouldn't be a problem, I have my Icom 746 as my primary rig at home, and I use an FT897D in the Rover. However, a few months ago my trusty old 746 broke down on me and I have been using the FT897 to keep me on the air at home.

I'll get the 746 repaired eventually, but with the economy the way it is I can't afford to put a weeks pay into repairing a radio so it will have to wait.

I will likely leave the FT897D in the Rover at least through field day, so after this week I may try to call the net from the Rover. The only difference you folks will likely notice is a better signal and slightly different beam heading. But should be fun:-)

If you get a chance this weekend, get on the air for the contest. Contest weekends, particularly the June contest, brings out a lot of folks who don't get on the air often so the bands should be active this weekend. And, we are all hoping for a big E'skip opening on 6 meters. Last year we had amazing conditions on 6, lets hope for a repeat!

I plan to start the contest [1800z] south of Louisville in EM67, then head for EM77, EM68, and EM78 on Saturday. Sunday morning I will start out up north of Indy in EN60, then hit EN70, EM79, and EM69. It should be a fun contest, get on and join us! I'll send out a better "schedule" soon.

1965. repeater 146.625 sometimes stuck in continuous transmit

Yahoo group: IndyHamRadio
Date: 2009-06-12 21:20:53 UTC
From: kc9brz
Topic: 1965 Message: 1965

One of the IRA (Indpls Repeater Association) repeaters, 146.625,
sometimes gets stuck in continuous transmit mode, transmitting
a series of beeps.

I checked their web-page, www.w9ira.org, and couldn't find
any names/emails/phone-numbers for a contact person.

Are there any IRA officers reading this who would like to be
informed if that repeater gets "stuck" again? Does the
transmit-time-out timer take care of it? Or does it need
to be manually reset?

-Dave A., kc9brz.

Topic: 1966 Message: 1966

Everything is coming together very slow, but I'm making progress.

I'll have my 3 bands, 6, 2, & 432.

6 meters, FT897D, 100 watts, to a Par Moxon @ 24'.
2 meters, FT897D, 160 watts, 10 elements @ 18'.
432 Mhz, FT897D, 100 watts, 18 elements @ 21'.

Here's the schedule:

1800 to 1930 EM67xw a beautiful park just out side of Fort Knox, KY
2030 to 2200 EM77aw about 10 miles from the park.
2300 to 0000 EM68wo in Salem, Indiana. The city park here is around
900' elevation. Very good for Indiana:-)
0030 to 0200 EM78cn a hilltop near Henryville, Indiana. This hilltop is
over 1000' and one of the best sites I've found. I'll stay here as
long as activity holds out.

On Sunday, I plan to hit the grid corner just north of Indianapolis,
near Noblesville. I haven't been here in a couple of years so I don't
remember the 6 digit grids, but the spots will be near the grid corner.

~1300-1500 EN60
1530-1730 EN70
1800-2000 EM79
2030-2230 EM69

Hoping 6 will cooperate,
73 and GL!

1967. Central States VHF Society Seeks Presentations for Annual Conference

Yahoo group: IndyHamRadio
Date: 2009-06-13 00:10:11 UTC
From: Mark Thompson
Topic: 1967 Message: 1967

Central States VHF Society Seeks Presentations for Annual Conference:

The Central States VHF Society (CSVHFS) <http://www.csvhfs.org/> is soliciting presentations and poster displays for their 43rd Annual Conference this summer -- July 23-26 -- at the Holiday Inn in Elk Grove Village, Illinois

<http://www.csvhfs.org/conference/index.html>.

Possible presentation topics on all aspects of weak-signal VHF and above include, but are not limited to, antennas (modeling, design, arrays and control), equipment construction,
propagation, test gear, regulatory issues, operating, digital signal processing and software-defined radio.

The submission deadline for presentations and poster displays is June 29; bring posters for display with you to the conference.

For more information, visit the CSVHFS 2009 conference Web page
<http://www.csvhfs.org/conference/index.html>
or contact Kermit Carlson, W9XA <w9xa@...>.

Mike,

The Indiana Section web site contains a "Speakers Bureau". This is a list of amateurs who are willing to travel to clubs to present programs. The URL of the bureau is: http://inarrl.org/bureau.html.

The list is a little out of date, but most of the amateurs listed are still available as guest speakers. For some, the topics may have changed a little. For example, I am listed for "Successful DX QSL'ing", but I can also give other programs, including a program about a ham's dream vacation, a trip to Belize as V31DU.

Not on the list is Gary Stouder, K9SG, from Greenfield (right down SR 9) who was on the Peter I & Desecheo Island DX'peditions.

Good luck.

73, Ray, K9DUR

1970. K9ZF/R 2009 June VHF QSO Party report, or Murphy strikes again

Yahoo group: IndyHamRadio
Date: 2009-06-17 15:49:55 UTC
From: Dan Evans
Topic: 1970 Message: 1970

K9ZF/R 2009 June VHF QSO Party report, or Murphy strikes again

Saturday morning found me trying to get the Rover outfitting completed. I never got the time to complete everything before, so I had to finish it all on Saturday morning. Trying to finish up at the last minute always increases the chances for problems, and this time it came in spades.

I planned to be in EM67 at 18:00z to start the contest. I ended up getting there around 20:00z, 2 hours late as it took a long time to get everything cabled up and tested. The first problem came up as I got to my first site. I had found a good site on a hill top that overlooked the Ohio River near Ft. Knox, KY. The trouble is, this site is located in Otter Creek Park that the city of Louisville, KY, decided to close due to the bad economy... So, I get to my first grid two hours late and there is a big locked gate across the entrance! I spend the next half hour searching for a good spot to operate from. I finally settled on an access road to a small cemetery, and get started.

6 is open, and stations from FL are booming in. The opening seems to have a pretty small foot print, lots of EL86, EL96, but not much else. After a few minutes of getting trampled in the pile ups, and getting lots of unanswered CQ's, I realize that I had left the 6m output power left at 15 watts! I turn it back up to the full 100, and finally start getting through a few of the pile ups. But I still seem to be having trouble, as each contact seems to be a real struggle, and CQ'ing nets zero contacts... After awhile I seem to have worked all of the stations calling on 6, so I try 2m to see if I can pick up so locals. I tune through 2, and hear nothing... Nada... So I stop on .200 and call CQ. As soon as I start calling I see that I have an infinite SWR! Now what?? I look through the cables and connections and don't find any problems, but 2m is inoperable until I can locate the problem. So I go back to 6m, work a few more stations, and decide to move on. The elevation at this site isn't great, and I think I'm just having a lot of trouble getting out of the hole....

On to EM77. About 10 miles down the road I find an empty parking lot and setup camp. 2m is still out, so I work another 10 or 15 stations on 6. Who was the huge station on 50.098 CW? I listened several times, but his 35+ WPM was so fast I couldn't even pick out a call sign. All I could copy was his CQ's and an occasional 5NN as he work someone. After awhile I gave up on him, and moved on.

I got to EM68 still running about 2 hours behind my schedule. 6 is still open, but seems to be fading fast. I work a dozen or so contacts and then discover my SWR on 2m has disappeared! I pick up K9LQZ and a few more on 2m, and finally find a station to run my three bands with,

N8XA portable. [working from memory, sorry if I busted your call!]
Anyway, this was my first, and only, contact on 432. After a couple
hours here, and lots of CQ's on 6 & 2, I decide to call it a night. I
had intended to hit EM78, but decided to wait and hit EM78 first thing
in the morning after a nights sleep.

Upon arriving home for the night, I discover my 6m Par Moxon has
suffered a nasty hit from a tree limb. One of the small aluminum struts
has broken. And 2m is acting up again, so I am effectively off the air...

I can repair the Moxon. And 2m is likely a bad connector on the feed
line. But I have had enough for one contest and throw in the towel.
So, after tons of work, 200 miles, and 3 grids activated, I have 39
QSO's. Probably 30 from 6m E-Skip...

yuck.... Sure hope I kept Murphy busy for everyone else! Here is
hoping for a better CQ VHF in July!

And, hope to catch everyone on Field day. I will be with the Clark
County, IN, group; W9WWI.

1971. Indiana / Kentucky 2 Meter SSB Net, 6/18/2009, 8:30 pm

Yahoo group: IndyHamRadio
Date: 2009-06-18 00:26:47 UTC
From: IndyHamRadio@yahoogroups.com
Topic: 1971 Message: 1971

Reminder from: IndyHamRadio Yahoo! Group
http://groups.yahoo.com/group/IndyHamRadio/cal

Indiana / Kentucky 2 Meter SSB Net
Thursday June 18, 2009
8:30 pm - 9:30 pm
(This event repeats every week.)
(The next reminder for this event will be sent in 12 hours, 3 minutes.)
Location: Charlestown, IN EM78el

Notes:
CQ...CQ...CQ...Announcing a New SSB Net

Spread the Word, Talk it up with Your Friends and Club Members.
Thursday evening, 8:30 PM ET (00:30z) for the _2 METER SSB NET_
Simplex Freq. 144.250 USB
Net Control: Dan K9ZF

The purpose for the net is:
_
_1. Increase 2 meter SSB activity in the Southern Indiana / Northern Kentucky Area, and Beyond.
2. To give area operators a chance to test their stations and their capabilities.
3. To give area SSB operators a chance to meet other active stations in the area.
4. Last, but not least, TO HAVE FUN:-)

As your net control I will start the net looking north from EM78el. After gathering check ins from the north I will move the beam east, then south, then west. Most active SSB stations will be using horizontal yagis, but don't let this discourage you if all you have is a vertical. Please give us a try with what you have!

I have a very small station here in EM78el, just east of Charlestown, IN. I have 150 watts and 10 elements at 25 feet. With my station, I will be depending heavily on the other stations to help relay check ins.

We look forward to hearing you!

1972. No IN/KY 2 meter SSB net

Yahoo group: IndyHamRadio
Date: 2009-06-18 01:47:28 UTC
From: Dan Evans
Topic: 1972 Message: 1972

Group,

Due to various technical difficulties, I'm going to have to cancel the net again. Actually, unless someone would like to volunteer to pick it up, I think we should just suspend the net until further notice. I have a ton of stuff going on right now and just don't have the time to dedicate to the net.

I'll keep all the email addresses I have, and maybe I can pick it back up later this summer, or fall.

Thanks for all of the check ins and support,

Indiana Celebrates Amateur Radio Week

Indiana is celebrating amateur radio week from June
21-28, 2009, thanks to a proclamation by Indiana Gov. Mitchell E. Daniels Jr.
This coincides with the annual Amateur Radio Relay League's (ARRL)
Field Day exercise on June 27-28.

Whereas: The state of Indiana has more than 21,500 licensed amateur radio operators who have demonstated their value in public assistance by providing free emergency radio communications to the state and nation and,

Whereas: Indiana amateur radio operators also provide emergency services to the Indiana Red Cross, FEMA, the Indiana Department of Homeland Security, and EOC's, and;

Whereas: These individuals have further demonstrated their value in public assistance by providing free radio communications for local parades, bike-a-thons, walk-a-thons, the Indianapolis Mini-Marathon, fairs, and other public events, and;

Whereas: These amateur Radio operators are on alert for any emergency, local or world-wide, and practice their communication skills during the American Radio Relay League's Field Day exercise, and;

Whereas: This years Amateur Radio Field Day exercise takes place on June 27-28, 2009;

Now, therefore, I, Mitchell E. Daniels Jr., Governor of the state of Indiana, do hereby proclaim June 21-28, 2009 as Amateur Radio Week in the state of Indiana, and invite all citizens to note this occasion.

---.....

This is the proclamation which can be found at http://www.inarrl.org

Hi Brian,

We just tested a guy on Saturday that was talking about balloons, 900mhz spread spectrum radios, and GPS tracking.

I'll go see if I can read the "yellow copies" from the test session, and send him a note with your info.

I wanna go too --- all that I need is some of that "spare time" stuff!

Mike

1978. Re: [SMC] Field Day VHF activity hour?

Yahoo group: IndyHamRadio
Date: 2009-06-24 22:38:09 UTC
From: Dan Evans
Topic: 1978 Message: 1978

Sounds good Mark,

I'll have my Rover station with 6, 2, and 432.

6m, 100 watts, Par Moxon, @ 25'
2m, 160 watts, 10 elements, @ 21'
432, 100 watts, 18 elements, @ 18'

I typically stay on SSB and CW, but I'll try to get someone to man the
2m FM rig during happy hour:-) The FM station is 50 watts to a big
vertical at around 70'.

I'll be with the Clark County [IN] Amateur Radio Club, W9WWI. We will
be at:
Garry E. Caven Park, 6485 Corydon Ridge Rd, Georgetown, IN

If you want to google it. I believe it is in EM68, but will not know
for sure until I get there Saturday with my GPS:-) It's near the EM78 /
EM68 border...

Will be trying looking for VHF contacts around 00:30z!

1979. IN-ARRL Bulletin 02-2009

Yahoo group: IndyHamRadio
Date: 2009-06-25 22:15:48 UTC
From: KB9BVN
Topic: 1979 Message: 1979

IN-ARRL Bulletin 02-2009
June 25, 2009 6:15PM EDT

QIN UPDATE FOR FIELD DAY - PLEASE READ

Indiana Stations participating in field day should note that bonus points 7.3.5 Message Origination to Section Manager and 7.3.6 Message handling is a part of field day that is good practice in getting a message out in a field/remote type operation.

Note that because of the expected business around the normal QIN frequency 3.535 we will be moving the Sat 0000Z 8:00pm EDT and Sunday 1330Z 9:30AM EDT sessions to on or around 3.600. This is in the Extra only portion of the band, but the hope is to find a clear frequency to operate the net. Most of the normal QIN operators are extra class and most of the clubs will be using extra class calls so I don't see that this will cause a lot of problems.

Thanks,

Ivin Flint W9ILF
Indiana section CW traffic net (QIN) manager

I just realized this event hasn't been advertised here, at least not recently. I am not personally involved with this hamfest, but I'm
just passing along the info from http://www.IndyHamFest.com
and the PDF flyer from that website.

Location: CAMP SERTOMA, US Highway 52 East (aka Brookville Rd)
at the intersection of German Church Road.
Indianapolis, IN. Lat/Long COORDINATES, 39-44-21 N, 085-58-16 W.

Tickets: $8/person at gate, $6/person in advance. See below, or
flyer on web site for stores that sell advance tickets. Parking
(ON GRASS) is included in the price of ticket. Children under
12 admitted free. FREE ADMISSION TO ALL ACTIVE MILITARY IN UNIFORM.

(SPECIAL PAVED HANDICAPPED PARKING AREA.)

Major Prizes for 2009: Yaesu FT 450 HF + 6m, Yaesu FT 7800R Dual-Band Mobile, Yaesu VX-150 2m Portable. (One chance per ticket.)

Hours:
Flea Market, 6 AM to 3 PM.
Commercial vendors, 7 AM to 3 PM.
License Testing, 9 AM to 11 AM.

COMMERCIAL BUILDING: $40/table.
Fully Air Conditioned, Drape Backdrops, Free Electrical power,
Doors open at 6a.m. for setup, Customers allowed in at 7a.m.

COVERED TABLESPACE: $15/table (8 ft).
Over 120 tables, large commercial tent, electric available,
setup opens Fri. @ 4p.m. all on grass.

(My note: not all the covered tables sold last year, so you still
should be able to reserve a table this week, and likely will
be able to just show up and purchase tablespace the day of.)

TAILGATE SELLING:
Large grass area, $5 fee per VEHICLE,
First Come basis, Setup starts Fri. @ 4p.m., Clean out the shack.

LICENSE TESTING will be offered OFF-SITE during
the show from 9 AM to Noon. Walk-ins are always
welcome. A shuttle service will be provided.
All applicants must have a photo ID. License upgrade
applicants must bring their original license
and a copy, plus any CSCEs. For complete details

visit the Hamfest website.

1985. Indy Radio club announcements.

Yahoo group: IndyHamRadio
Date: 2009-07-05 18:10:52 UTC
From: kc9brz
Topic: 1985 Message: 1985

I don't remember seeing the Indy Radio club meeting announcements on this list. I've been meaning to go to one of their meetings but I keep forgetting.

Could maybe someone get word to their officers that this email group would be a good place to put their meeting and other event announcements?

http://www.indyradioclub.org/

1986. Any RCA-Thompson radio club announcements?

Yahoo group: IndyHamRadio
Date: 2009-07-05 18:15:19 UTC
From: kc9brz
Topic: 1986 Message: 1986

I don't know if the local RCA radio club's, http://www.w9rca.org/
meetings are open to the public, but they are also at G.T. South's restaurant
on East 71st St. They are usually the 2nd Tues of the Month.

Hi Dave,

I am planning on going to this one, most likely first thing in the morning.

Not looking to buy anything just hanging out with the hams.

Will you be there?

2008. Repeater Coordiantion Update

Yahoo group: IndyHamRadio
Date: 2009-07-08 12:26:34 UTC
From: Charlie - N9MEW
Topic: 2008 Message: 2008

To: All Indiana Repeater Coordination Holders and Trustees

From: Indiana Repeater Council

It is time to update all Indiana repeater coordination's.

The IRC has changed to a new data base, and we have found a few data errors in the process. Also, we would like to purge the paper repeaters. This new data base makes the repeater directory more accurate, in that the Directory now comes directly from the data base.

For several years we have been checking all repeater grid coordinates because we have found a few errors, particularly in older systems. Some of the older systems have been found to be 5 to 10 miles from where we thought they were. One was found in the middle of an airport runway. Many years ago applicants often used the grid coordinates of the local community airport. We are fixing those errors. We can now very accurately locate your site.

We have added a couple of new temporary coordinators to make the update process go more smoothly.

We have worked on the area assignment. This is the area that you wish your repeater to be listed under in the directory. Please check your assignment.

When converting to the new database, the sponsor field for the repeater directory remained blank. For this reason, the sponsor listing in the ARRL repeater Directory was not filled in. We are working on transferring this field from the old database to the new database. We are allowed 8 characters for that field.

Please look at your 2009-2010 ARRL directory for accuracy. Please tell us what is incorrect, and if it is not correct, please file an online update.

We are working on getting the online listing updated.

In order to maintain your coordination we must have an update every two years. We need this even if there have not been any changes in your information. If a system's coordination has not been updated in five years or more, we will attempt to contact the holder of coordination by the last telephone or e-mail information we have. If no contact can be made and we believe that the system is no longer operating, we may cancel the coordination and re-coordinate the frequency to another applicant. We cannot be responsible for any de-coordination errors if the system has not been timely updated. Timely updates will help keep your contact information current.

To update on line please go to http://www.ircinc.org and select Online Coordination Form. Please complete as much information as possible and submit the update to us.

From the Hamfest tab at www.IndyHams.org

http://www.indyhams.org/docs/Broad%20Ripple%20Hamfest.pdf

9th Annual Broad Ripple Hamfest

Saturday, August 1st, 2009

The Broad Ripple 'Tail Gate' Hamfest will be held August 1st, 2009
from 7AM to 1PM. At 7373 Westfield Blvd., Indianapolis, IN.

About 1.4 miles north of 62nd St. (Broad Ripple) and 1.8 miles
south of 86th St. (Nora) on Westfield Blvd.

There are no fees for visiting or selling of equipment.

Bring your own tables & chairs.

There is plenty of parking available on the lot.

K9OOA (Joe) and K9OOB (Betty) will supply coffee & donuts at 7 AM
and the Indianapolis radio Club will supply hot dogs, buns,
condiments, and soft drinks.

Participants are requested to bring one (1) pitch-in dish.

See the PDF file referenced above for contact information.

(I don't have anything to do with this, just passing along the info.
-Dave, kc9brz)

2017. Central Illinois Balloon Launch, Saturday, 7/18 @ 8:50 am

Yahoo group: IndyHamRadio
Date: 2009-07-16 06:17:49 UTC
From: Mark Thompson
Topic: 2017 Message: 2017

QSO Opportunity with High Altitude Balloon Flight Saturday, 18 July 2009

As part of SpaceJam-3(www.spacejamboree.com),
DePauw University(www.depauw.edu/acad/physics/base) will be flying a cross band repeater to allow the Scouts at the Jamboree to talk with ground stations from a large area of the central portion of the United States.

Launch will occur at 13:50 UT (8:50 am Central Daylight Time) from Rantoul, IL (40.29 N, 88.14 W) The target ascent rate will be 1000 feet/min.

APRS information will be sent over 144.39 MHz every minute under the call sign, W9YJ-11.

The helium filled balloon will reach a float altitude of 70000 feet (21.5km) about 15:00 UT and will attempt to float at this altitude for about three hours. During this time the balloon should travel slowly to the NW from about 40.0N & 87.8W to 40.1 N & 88.1 W. The descent will begin about 18:00 UT on a slowly deflating balloon with landing about 19:30 UT.

The uplink frequency on the radio will be 144.36 MHz, and the downlink frequency will be 446.025 MHz.

The Scouts will be using the call sign WB9SA. If you have a chance to contact the station, the Scouts will be thrilled to make the contact! You may also attempt to use the repeater for a long distance Earth-Balloon-Earth contact with hams from larger distances.

Thanks to Howard Brooks, KC9QBN, Professor of Physics & Astronomy at DePauw University, W9YJ for making this happen!!!

If you are in the IL/IN area you might catch ATV from our first balloon going up (100,000 ft) at 8:20 AM CDT Saturday from Rantoul IL 430 Mhz, with a CW call "DE WB9SA"

A big thank you, to all the hams radio operators making www.spacejamboree.com the coolest Scout Technology event in the Central USA!!!!! THANK YOU Howard! Thank you VCARA, ARISS, ARRL Foundation Contributors, NASA, Richard Garriott, West Mountain Radio, PolyCom, 323.tv, Mike and Dave (our welders) and DePauw University.

73, and Make it a Tremendous Day,

Brian K Walker

2021. RE:FS/Trade

Yahoo group: IndyHamRadio
Date: 2009-07-20 11:55:00 UTC
From: James
Topic: 2021 Message: 2021

3 mobile cb radio's

1. Cobra 18WX ST II 40 Channel,with weather band,and scan mode $35.00

2. Realistic TRC-453 40 channel with usb/lsb side band $25.00

3. Texas Ranger Free Spirit TR-127FS 40 channel limited edition $55.00
this radio has been tuned and modified.has custom face plate with eagle,statue
of liberty overlaying american flag.built in power mic,swr meter.

1.has a cobra power mic included.

or $75.00 for all. or trade for working 2meter mobile.

all garenteed in new working condition.

these have all been sold.
thanko you.

Sent: Wednesday, July 22, 2009 7:47:33 AM
Subject: Central States VHF Conference - Starts Tomorrow

The Central States VHF Society Conference - 2009
starts tomorrow at the Elk Grove Village Holiday Inn,
Elk Grove Village,  Illinois.

The gathering begins with a Pig Roast and Hospital
Suites on Thursday night. Friday morning will begin
the two full days of technical activities including
the measurements contests on Antenna Range and
with the Amplifier Gain and Noise figures. This
is  followed by the  Friday Luncheon where
Speaker Marshal Williams, K5QE, will present on the
"K5N - The 6-meter Grid Expedition to EL55 "

Technical Presentations begin shortly after the
noon hour on Friday. Presenters for this year's
Conference and their topics include;

Dennis Motschenbacher, K7BV,  6-meter K7BV Caribe 2009 - 5J0BV
Arliss Thompson, W7XU,        6-meter TZ6EI Mali DXpedition
Bill Davis, K0AWU,          SoftRock Software Defined Radios (SDRs)
Chuck Clark,  AF8Z,      Low Noise VCO Tips
Melvin B. Graves,  WR0I,  Low Cost High Performance RF Power Meter
Steve Kostro, N2CEI,      A Multi-purpose Microwave Signal Source
Chuck Clark, AF8Z           Power FET Supply
Greg Jurrens, WD0ACD,    Flex-VU - FlexRadio 5000VHF/UHF Transverter
Kevin Kaufhold,W9GKA,    Cyclical Trends in VHF Contesting
Todd Sprinkmann, KC9BQA,  Increasing Activity Levels on the VHF/UHF Bands
John Kalenowsky, K9JK,    History of the VHF/UHF Spring Sprints
VUAC        A VUAC Panel Discussion - VHF/UHF Contesting
Al Ward, W5LUA,          Getting Started on 13 cm EME
Russell Dwarshuis, KB8U  An Automated Digital TV Propagation Logger
Gould Smith,W  A4SXM,    AMSAT's SuitSat-2

  The Technical Portion of the Conference winds down with a
special Presentation for the entire Family;

Rod Blocksome, K0DAS      The Search for Amelia Earhart
```

The Saturday Evening Banquet concludes the offical Conference activities. ARRL President and Central States Society member Mr Joel Harrison, W5ZN, is the Keynote speaker for this event.

The Central States VHF Conference is an excellent opportunity for Hams not yet involved in VHF/UHF Weak Signal activity to explore the possibilities that this exciting portion of the Amateur Radio hobby offers. Saturday there is an introductory Weak-Signal all day presentation called VHF-101 where the techniques of operating and building an VHF/UHF station will be explained, along with an antenna workshop where participants will construct working UHF yagi antennas. This all-day presentation and afternoon workshop are available for $10 admission.

Conference registration is available at the Door for $50 plus $5 and some last-minute seating is available for the Thursday Evening Pig Roast, Friday Luncheon and the Saturday Awards Banquet.

Please visit the Society website for more information; http://www.csvhfs.org/conference/index.html

2023. Whitley County W5YI VE Test Session , 7/25/2009, 9:00 am

2024. ARRL August UHF Contest (222 Mhz & Up), August 1 - 2

Yahoo group: IndyHamRadio
Date: 2009-07-24 18:53:04 UTC
From: Mark Thompson
Topic: 2024 Message: 2024

http://www.arrl.org/contests/rules/2009/uhf.html

2009 ARRL August UHF Contest Rules
General Rules
Rules – 2009 ARRL August UHF Contest
1. Object: To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
2. Date and Contest Period: First full weekend of August. Begins 1800 UTC Saturday, ends 1800 UTC Sunday (August 1-2, 2009). Entrants may use as much of this time as they wish.
3. Entry Categories:
1. 3.1 Single Operator – Low Power
2. 3.2 Single Operator – High Power
3. 3.3. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1.A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4.. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory..
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8. A rover may not make more than 100 QSOs with any other one rover.
4. 3.4. Limited Rover. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 222 MHz, 432 MHz, 903 MHz and 1296 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
5. 3.5. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
6. 3.6. Multioperator.
4. Exchange: Grid-square locator (see April 1994 QST, page 86 or www.arrl.org/locate/gridinto.html).

1. 4.1 Exchange of signal report is optional.
5. Scoring:
1. 5.1 QSO points:
1. 5.1.1 Count three points for each complete 222- or 432-MHz QSO.
2. 5.1.2 Count six points for each complete 902- or 1296-MHz QSO.
3. 5.1.3 Count 12 points for each 2.3-GHz (or higher) QSO.
2. 5.2 Multiplier: The total number of different grid squares worked per band. Each 2 degree by 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3 Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. Example: W1AW works W3CCX in FN20 on 222, 432 and 1296 MHz. This gives W1AW 12 QSO points (3 + 3 + 6) and also three grid-square multipliers. Final score is 12 QSO points X 3 multipliers, or 36.
4. 5.4 Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1 Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Miscellaneous:
1. 6.1 Partial QSOs do not count. Both callsigns, full exchanges and acknowledgment must be sent and received.
2. 6.2 A transmitter, receiver or antenna used to contact one or more stations under one call sign may not be used subsequently during the contest period under any other call sign (with the exception of family stations). The intent of this rule is to accommodate family members who must share a rig, not to manufacture artificial contacts.
3. 6.3 All equipment and antennas used by entrants must be owned and operated by amateurs. Use of non-amateur owned gear is not prohibited, but use of such equipment places the entrant in a separate category, ineligible for awards.
4. 6.4 Contacts made by re-transmitting either or both stations, whether by satellite or terrestrial means, are prohibited. Frequencies regularly occupied by a repeater in a locality may not be used for contest work, even if the repeater is turned off.
7. Awards: Certificates will be awarded in the following categories:
1. 7.1 Top single-operator High and Low power score in each ARRL Division.
2. 7.2 Top single operator High and Low power score on each band (222, 432, 902, 1296 and 2304-and-up categories) in each ARRL Division where significant effort or competition is evidenced. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band achievement stickers.) For example, if W1AW has the highest single-operator multi-band score in the Atlantic Division and his 432-MHz score is higher than any other Atlantic Division single-operator’s, he will earn both a certificate for being the single-operator Division leader and an endorsement sticker for 432 MHz.
3. 7.3 Top multi-operator score in each ARRL Division where significant effort or competition is evidenced. (Multioperator entries are not eligible for single-band awards.) Additional certificates may be awarded where significant effort or competition is evidenced.
8. Submission: Deadline for submission of entries for this contest is 1800z Monday, September 1, 2009.
1. 8.1 Paper logs and properly completed summary sheets should be mailed to: August UHF Contest, ARRL. 225 Main Street, Newington, CT 06111.
2. 8.2 Cabrillo formatter logs should be emailed to AugustUHF@...

3. 8.3 Participants may submit using the Web Applet at www.b4h.net/cabforms .
4. 8.4 Entries postmarked or email dated after the deadline may only be considered checklogs.
Other: See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST. These are also available at the Contest Branch Website at: http://www.arrl.org/contests .Questions regarding this contest should be emailed to contests@... . Only use the contest-name email for submission of entries.
All contest forms and rules may be downloaded at: http://www.arrl.org/contests/forms/

From: kc9brz
Topic: 2026 Message: 2026

From the Hamfest tab at www.IndyHams.org

http://www.indyhams.org/docs/Broad%20Ripple%20Hamfest.pdf

9th Annual Broad Ripple Tailgate Hamfest

Saturday, August 1st, 2009, 7AM to 1PM.

7373 Westfield Blvd., Indianapolis, IN.

There are no fees for visiting or selling of equipment.

Bring your own tables & chairs. Plenty of parking on the lot.

K9OOA (Joe) and K9OOB (Betty) will supply coffee & donuts at 7 AM
and the Indianapolis radio Club will supply hot dogs, buns,
condiments, and soft drinks.

Participants are requested to bring one (1) pitch-in dish.

See the PDF file referenced above for contact information.

(I don't have anything to do with this, just passing along the info.
-Dave, kc9brz)

2028. Fw: Follow TAPR Digital Group Activities with Twitter

Yahoo group: IndyHamRadio
Date: 2009-07-31 18:40:03 UTC
From: Mark Thompson
Topic: 2028 Message: 2028
Attachments: 1 described; binary payloads are missing from this source WARC

The ARRL & TAPR will sponsor the DCC (Digital Communications Conference) in the Chicago area again this year.

----- Forwarded Message ----
From: Tapr Digital <taprdigital@...>
Sent: Friday, July 31, 2009 1:17:03 PM
Subject: Follow TAPR Digital Group Activities with Twitter

TAPR has been ham radio's preeminent digital voice & data technology group for over 25 years.

TAPR was a pioneer in developing packet radio technology and most recently has been a leader in the development of SDR (Software Defined Radios).

TAPR promotes the development & use of digital voice & data technologies through several means:

- TAPR Publications, www.tapr.org/publications, including:
  1) PSR, Quarterly Journal, www.tapr.org/psr
  2) DCC Proceedings, www.tapr.org/pub_dcc27.html

- TAPR Events
  1) Annual DCC (Digital Communications Conference), www.tapr.org/dcc
  2) Dayton Hamvention TAPR Forum & Banquet, www.tapr.org/dayton

The ARR/TAPR DCC (Digital Communications Conference) will again be in the Chicago area on September 25 - 27. The DCC offers both Technical & Introductory presentations. TAPR welcomes the submission of both technical papers & presentations for the DCC covering all digital voice & data technologies.

TAPR also has a number of Kits, www.tapr.org/kits, Software, www.tapr.org/software, and Products, www.tapr.org/productsavailable.

You you can join TAPR at www.tapr.org/organization.html#membership

You can now learn about TAPR's activities & developments throughout the year by following TAPR on Twitter at http://twitter.com/taprdigital

In the meantime, you can reach TAPR at http://www.tapr.org/contact_us.html

2029. PACKET radio in Indiana

Yahoo group: IndyHamRadio
Date: 2009-08-02 21:21:45 UTC
From: n9nwo
Topic: 2029 Message: 2029

The Tippecanoe ARES group has started a new PACKET digipeater on 145.050 Mhz (see http://www.w9tca.com/w9tca/packet). For the most part PACKET has disappeared as new "toy". However it is coming back as a tool for emergency traffic.

MARS uses PACTOR and MT63 as digital tools on HF. PACKET seems to be the VHF version.

Is there a list of digipeaters in Indiana?

N9NWO

2030. RE: [IndyHamRadio] PACKET radio in Indiana

This dos Not answer Your Question , But I the last couple of Yrs that I have attended to Ft.Wayne Hamfest Repeater council Meetings , The Members stated that PKT Use is picking up in Indiana . I have Small Repeater group in N/W Ind and I posted the Message to it and I Thought I would share the info from a Il Member

73 De Don KA9QJG

The Tippecanoe ARES group has started a new PACKET digipeater on 145.050 Mhz (see http://www.w9tca.com/w9tca/packet). For the most part PACKET has disappeared as new "toy". However it is coming back as a tool for emergency traffic.

MARS uses PACTOR and MT63 as digital tools on HF. PACKET seems to be the VHF version.

Is there a list of digipeaters in Indiana?

N9NWO

Here is the Message I got back from a Ham Friend in Il

++

At KARSFest, I made the formal announcement of the selection of a combination of Winlink 2000 and APRS software to serve as the Illinois Section's digital emergency communications network. This network will operate on 145.610 MHz, statewide. Individual stations will be able to access the network's 'nodes' using Airmail or Paclink software applications (both are free), and, TNC's can be either software emulations (AGWPE) or the more traditional hardware modems.

What's needed to make this work is the network of fixed stations - the 'nodes,' as we used to call them. Ideally, we'd like to have one in each of the 102 counties in Illinois - more than one, in fact, in the more populated areas where tall buildings and in the rural, rugged areas where terrain might cause coverage problems from a single point. Each one of these stations will consist of a PC running either Windows XP or Vista operating system. Applications running on the PC will include the Winlink 2000 software, AGWPE, and UIView32 - all freeware applications. A hardware TNC (1200 baud is fine, 1200/9600 is a plus) and a suitable 2 meter rig and antenna will complete the station. If the PC can be linked to the Internet, that, too, would be a plus.

We desperately need clubs, repeater operators and organizations, ARES groups, EMA's with available 2M rigs, and, volunteers to start building and getting these fixed-base systems on the air.

My purpose in writing to you today is to ask if you will help. Can you put an RMS Packet station on the air in your town or county? If you cannot, but, perhaps, know of someone not on this mailing list who might be willing to help, please pass this message along. If you need more information on what we're doing or how to go about getting involved, please contact me or Ass't SEC for Digital Communications, Art Bertheaume, N9ZZK abertheaume@....

Thanks!

From: KB9BVN
Topic: 2031 Message: 2031

I got a call from Ivin W9ILF and he is reporting that the storms today have removed most of the siding from his home, some of the roof, all of the barn, and all of his antennas. Apparently Emminence Indiana was severely impacted by straight line winds in excess of 60 mph in places. He will not be able to act as NCS for QIN tonight, and probably not for the next week or so. He is asking that one of the QIN regulars plase pick up the ball for NCS until he can get back on the air.

Ivin, sorry to hear of the storm damage. Hope you and your family are safe.

If you need help with clean-up check with Emergency Mgmt. and see if there is a CERT team in your area.

Might check with Red Cross in your town for financial assist with home repars, and with help for your radio gear, as it can be used to help your community during disasters.

Take care. Hope you get back on the air soon.

2034. RE: [IndyHamRadio] PACKET radio in Indiana

Yahoo group: IndyHamRadio
Date: 2009-08-07 01:24:45 UTC
From: Mike Wolford
Topic: 2029 Message: 2034

Once upon a time --- long, long, long, long (12 years), ago.

My call STILL shows up as a packet bbs! I'd be hard pressed to even identify a TNC anymore.

Long gone are the days of the KK9G and N5CEC packet BBS's. And the pair of John's in the Noblesville area, sorry but the call signs escape me.

Software called MSYS, four port serial cards, and getting multiple windows operating in the DOS environment - ha --- no more syntax errors I suppose!!! There were a couple of folks attempting to make things operate in that new stuff called windows.

Two radios on two meters, backbone on 220Mhz, and another rig on HF. RFI --- you just had to learn to live with it --- a computer (big, bad 486!), four TNC's, and the four radios, all tended to submit their own contributions to the noise level.

A tip of the hat to the folks that are still operating them. Thanks for the effort, time, and money, that you pour endlessly into the operation.

Mike N5CEC

Wow...KK9G is a call I haven't heard in a long time.

I remember him helping me try to setup a Packet BBS in about 1988 or 1989...I don't think we ever got it working, I was in need of a better radio, and my PK99 wasn't cutting it.

The good old days eh?

Subject: RE: [IndyHamRadio] PACKET radio in Indiana

Once upon a time --- long, long, long, long (12 years), ago.

My call STILL shows up as a packet bbs! I'd be hard pressed to even identify a TNC anymore.

Long gone are the days of the KK9G and N5CEC packet BBS's. And the pair of John's in the Noblesville area, sorry but the call signs escape me.

Software called MSYS, four port serial cards, and getting multiple windows operating in the DOS environment - ha --- no more syntax errors I suppose!!! There were a couple of folks attempting to make things operate in that new stuff called windows.

Two radios on two meters, backbone on 220Mhz, and another rig on HF. RFI --- you just had to learn to live with it --- a computer (big, bad 486!), four TNC's, and the four radios, all tended to submit their own contributions to the noise level.

A tip of the hat to the folks that are still operating them. Thanks for the effort, time, and money, that you pour endlessly into the operation.

2036. New Illinois Packet Radio Group

Yahoo group: IndyHamRadio
Date: 2009-08-08 19:03:53 UTC
From: Mark Thompson
Topic: 2036 Message: 2036

Over the last couple years there has been a resurgence in interest & activity in packet radio.
The interest is not in creating the former BBSes & networks of the 1990s, but instead in doing things packet radio is uniquely good at.

Packet radio's resurgence started with the new application, APRS which uses packet radio. In some areas the application
DX PacketCluster provides access via packet. More recently applications like Output & Winlink are making use of packet radio.

As is indicated in the attached email, Illinois ARES is planning to implement the Winlink application state-wide using packet radio for user access.
However, the Illinois ARES Digital Working Group is apparently more focused on the ARES implementation of Winlink and
is not the appropriate forum for general discussion of packet radio or other digital modes.

So I have created a new group, Illinois Packet Radio. The focus of the group will be to discuss packet radio usage in Illinois
including applications using packet radio, such as APRS, Outpost, Winlink, DX PacketCluster, etc.

We hope to also create a database of packet radio usage in the state.

The Illinois Packet Radio group is available at:
http://groups.yahoo.com/group/IllinoisPacketRadio/

Look foward to your participation in the group.

Thanks.

73, Mark, WB9QZB

By the way, the Illinois D-STAR yahoo group, is also available at:
http://groups.yahoo.com/group/IllinoisD-STAR

----- Forwarded Message ----

To: IL_ARES_DWG@yahoogroups.com; Illinois_ARES@yahoogroups.com
Sent: Wednesday, August 5, 2009 7:30:18 AM
Subject: [IL_ARES_DWG] Once again. . .

With apologies for the dual reflector post, it is important that this message get out to all concerned.

Regarding the Illinois ARES Digital Communications Network initiative:
Let's go through the motions one more time. I have been
given to understand that there are those who have misunderstood the recent efforts to develop a digital EMCOMM system for Illinois.

Here are the facts, plain and simple:

The effort underway is to develop an Illinois ARES digital communications network. Note the acronym - ARES. That acronym refers to the Amateur Radio Emergency Service. That third word is the operative term in the phrase. This will be an emergency digital communications system. This effort is neither intended to supplant, extend, nor change the frequency of operation of any existing digital activity anywhere in this state (or, bordering states). We are neither trying to usurp nor hinder a resource for DX packet cluster users, nor are we trying to provide a digital outlet for those without high-speed Internet systems to obtain their daily dose of email. The network we are building is for the expressed purpose of providing a digital conduit by which emergency communications traffic - data - can be moved between any two points in Illinois.

This network will be on a discrete frequency. This frequency is far from any of the current packet radio activity of which I am aware in the state of Illinois. The frequency assignment we have been handed can be found in the IRA's 2006 document, available online, at http://www.ilra.net:80/Band-Plan-2006.html If you take the time to follow the link, you'll see '145.610 ARES Statewide Packet.' I didn't attend the meeting that preceded that publication, and, it is not
an issue for me. As far as I'm concerned, it's as suitable a frequency for our purposes as any other, and, it meets the criterion of being well removed from 145.01, 145.05, 144.39 and 147.555. Users of those particular frequencies need not worry about interference from the ARES network.

We're not looking to develop a system of BBS's. We're not looking to move routine email around the state. We are not putting a network together to facilitate classified ham ads or hamfest announcements. We are developing an emergency digital communications system. We hope that it will be used enough on a weekly or daily basis to ensure that the network operates properly, but, again, we're not building a replacement for the Internet.

This network will offer 1200 baud VHF packet radio connectivity as a minimum standard. If node operators (RMS Packet/Relay stations) have 9600 baud capabilties, so much the better. But, 1200 baud is the least common denominator. Joe Ham can get on 1200 baud packet radio with any 2 meter FM rig and a sound card equipped PC running AGWPE TNC-emulation software. It isn't the prettiest lash up, and, certainly not the most efficient, but, it will work, and, that gives us our starting point and minimum standard.

The network will operate using Winlink 2000 RMS Packet/RMS Relay software and the current iteration of UIView software. These can be run simultaneously on a Windows XP/Vista platform using AGWPE software running concurrently. I understand that RMS Packet/Relay and APRS applications can also be run under the Linux OS.

Individuals will use client software suitable for use with the Winlink 2000 and APRS servers. Client software for messaging with the Winlink systems can be either Airmail or Paclink. Those are the only two client appications that are currently supported, to the best of my knowledge, but, I am not a Winlink guru and cannot speak with authority to that issue. I defer to the

APRS crowd as to what soft/hard-ware applications are currently in vogue for use with that system.

RMS Packet, RMS Relay, Airmail, Packlink, AGWPE and UIView32 are all free software applications.

Will this network be state of the art? Not likely - we're using existing technology and assets; some of the hardware has been around for a couple of decades, in fact. 1200 baud is a slow crawl compared to modern Internet broadband connections. Even 56k dial-up connection speeds leave 1200 baud in the dust. But, we're talking about an emergency communications system - a 'when all else HAS failed' system. And, compared to voice or CW, 1200 baud is pretty speedy.

David -

I have done over four dozen D-STAR Overview presentations, including at the Ft. Wayne hamfest & in northwest Indiana.

If I lived closer I would volunteer to do a presentation myself, but I know of at least a couple people in the greater Indianapolis area
who might be able to do a presentation or know someone who could. I'll copy them on this reply to see if they're interested & available.

Mark, KB9KHM is in the Lafayette area and has a great deal of knowledge about D-STAR technology and is
involved with the Lafaeyette D-STAR repeaters.

Dale, W9BYCZ is a founding member of the W9ICE group which has 2m & 70cm D-STAR repeaters in the Indianapolis area.

If you have any other questions or have a difficulty arranging a presentation let me know. I have done remote presentations using
Skype & WebEx in the past.

In the meantime, I hope everyone considers attending the ARRL/TAPR DCC (Digital Communications Conference) in the Chicago area
near O'hare airport. We hosted the DCC last September & it is returning to the Chicago area again this year.
TAPR is the premiere national organization focusing on ham radidigital voice & data communications. The DCC is TAPR's annual conference.
The DCC has 2 1/2 days of Technical forums and on Saturday a separate set of concurrent Introductory forums so
there is something for everyone no matter what our background is.

Look foward to seeing you at the DCC.

38th TARA Hamfest
Sunday August 16, 2009
8:00 am - 2:00 pm
Location: Tippecanoe County Fairgrounds (Home Ec Building)
City State Zip: Lafayette Indiana

Notes:
No charge for setup space. Tickets are $5.00 and kids 11 and under are free. Latest Information at: http://www.w9reg.org

Amateur Accessories will be a vendor.

VE testing will be held at the Lafayette Hamfest, starting at 12:00 (in the Kitchen area of the Home Ec Building). The fee is $15 and current hams should bring their license, a copy of that license and a photo ID. Unlicensed applicants should bring a photo ID. Might be a good idea to bring pencils, paper, and calculator.

2052. Need Packet Radio, APRS, Winlink and/or Emcomm Presentations at DCC (Digital Communications Conference)

Yahoo group: IndyHamRadio
Date: 2009-08-26 04:40:13 UTC
From: Mark Thompson
Topic: 2052 Message: 2052
Attachments: 1 described; binary payloads are missing from this source WARC

Need Packet Radio, APRS, Winlink and/or Emcomm Presentations at DCC (Digital Communications Conference)

As many of you know the ARRL / TAPR DCC (Digital Communications Conference) is returning to the Elk Grove Village Holiday Inn
hear O'Hare airport on September 25 - 27.

The DCC is the national premiere digital conference covering all digital modes including voice & data.

The DCC has 2 1/2 days of Technical forums on Friday & Saturday and on Sunday morning one or more deep dive sessions.

On Saturday there is a concurrent track of Introductory sessions.

While we have several great technical & introductory presentations already scheduled there are some topics we would like
covered with presentations:

1) Introduction to APRS

2) Introduction to Winlink

3) Introduction to Packet Radio.

4) Using Digital Modes for EmComm

While it is always better to present in person we recognize some of you may not be able to make it to Chicago, but would like to present.
This year we have the capability to support remote presentations using Skype for audio & Adobe ConnectNow for video.

If you are able to present on one of the topics above or perhaps another topic please let me know as soon as possible.

Thanks.

73, Mark, WB9QZB

2055. Re: Bloomington High School South looking for 220 duplexers

Yahoo group: IndyHamRadio
Date: 2009-08-29 00:23:53 UTC
From: k9mhz
Topic: 2053 Message: 2055

Hey Neil,

Excellent in working on getting a 220 machine going! Love that band, just wish it was more popular and manufacturers made more gear for it.

Best wishes in your endeavors,

Brad, K9MHZ
Carmel

2057. September VHF QSO Party, September 12 - 14

Yahoo group: IndyHamRadio
Date: 2009-09-04 07:33:49 UTC
From: Mark Thompson
Topic: 2057 Message: 2057

http://www.arrl.org/contests/rules/2009/sepvhf.html

2009 September VHF QSO Party Rules
General Rules
1. 1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. 2. Date and Contest Period: The second full weekend of September. Begins 1800 UTC Saturday and ends 0300 UTC Monday (September 12 - 14, 2009).
3. 3. Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power
3. 3.2. Single Operator Portable.
2. 3.3. Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
1. 3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
2. 3.3.2. A rover may not operate with more than one call sign.
3. 3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
4. 3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
5. 3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
6. 3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
7. 3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
8. 3.3.8.. A rover may not make more than 100 QSOs with any other one rover.
3.. 3.4. Limited Rover. Same as the “Rover” class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
4. 3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
1. 3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition. Please see “General Rules For All ARRL Contests Above 30 MHz” for more information on the

Rover categories.
5. 3.6. Multioperator:
1. 3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
2. 3.6.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. 4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. 5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count three points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
3. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
4. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
2. 5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and scoreif they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...
6. 6. Miscellaneous:
1. 6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 6.2.. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
3. 6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. 7. Awards:
1. 7.1. Certificates will be awarded in the following categories.
1. 7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
2. 7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
3. 7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)
4. 7.1.4. Top rover in each ARRL Division and Canada where significant effort or

competition is evident. (Rover entries are not eligible for single-band awards.)
5. 7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
6. Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7. 7.1.6. Top scoring club in each club competition category will be awarded a gavel.
8. See “General Rules for all ARRL Contests” for club competition information.
8. 8. Submission:
1.. 8.1. All submissions must be emailed to SeptemberVHF@arrl.org or postmarked no later than 0300z Wednesday, October 14, 2009. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
2. 8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
3. 8.3. Electronically submitted entries are considered signed.
4. 8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
5. 8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. 9. Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests
1. 9.1.1 For queries contact contests@arrl.org or (860) 594-0295.
2. 9.2. Forms may be obtained by:
1. 9.2.1. Downloading from the Internet at the Contest Branch Website: http://www.arrl.org/contests/forms.
2. 9.2.2. Sending an SASE to September VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.

There will be Introduction to VHF/UHF Digital Voice forums in September at the following events.

- Radio Expo Hamfest, Saturday, 9/12 @ 11 am

- Peoria Superfest, Saturday, 9/19 @ 11 am

Details about these events are at the links below. There will be forums on other topics at these events as well.

At the forums we will feature the video, "Introduction to VHF/UHF Digital Voice" by Amateur Radio Video News.
The video covers both D-STAR & P25 and you can see a preview of it at:
www.arvideonews.com/dv/index.html
The video is professionally made by Gary Pearce, KN4AQ, a former Chicago area resident & former President of the Chicago FM Club.

During the forum we will also cover D-STAR technology & applications; new D-STAR radios; D-STAR repeaters in IL, WI & IN;
State-wide D-STAR net; Q&A and open discussion.

Look forward to seeing everyone. At the events I'll be monitoring 145.67 D-STAR & 147.435 (107.2) FM.

2072. ARRL/TAPR DCC (Digital Communications Conference) Forum Schedule Announced

Yahoo group: IndyHamRadio
Date: 2009-09-10 02:15:08 UTC
From: Mark Thompson
Topic: 2072 Message: 2072
Attachments: 2 described; binary payloads are missing from this source WARC

ARRL/TAPR DCC (Digital Communications Conference) Forum Schedule Announced

TAPR is the premiere national digital organization covering all digital voice & data technologies and digital techniques such as SDR. More information about TAPR can be found at: www.tapr.org

TAPR is active throughout the year. At the Dayton Hamvention TAPR sponsors a digital forum and a joint banquet with AMSAT. TAPR publishes a quarterly journal, the PSR and develops digital techniques such as SDR. TAPR holds in conjuntion with the ARRL an annual national Digital Communication Conference. You can follow TAPR's activities, events & updates regularly
on Twitter at: www.twitter.org/taprdigital

The ARRL/TAPR DCC (Digital Communications Conference) will be held on September 25 - 27, 2009 again in the northwest suburbs of Chicago at the Elk Grove Village Holiday Inn near O'Hare airport with a free hotel shuttle bus.

The DCC has something for everyone from those new to digital modes to those experienced with digital communications.
The DCC has 2 full days of Technical forums on Friday & Saturday. On Saturday there is an additional
concurrent track of Introductory forums. On Sunday morning there is a 1/2 day technical session which is a deep dive into
one or more digital topics, such as SDR.

The DCC is well known for introducing new technologies & concepts. This
year presentations include:

* Two Ham DTV, Digital Television presentations by Art, WA8RMC & Ken, W6HHC.
* "Use of Digital Communications at the Marine Corps Marathon in Washington D.C." by Tom, N4ZPT.
* "Universal Ham Radio Text Messaging" by Bob Bruninga, WB4APR, creator of APRS.

After the Friday night social we plan to have another D-STAR get together.

The Saturday night banquet speaker will be Bill Brown, WB8ELK. Bill is a pioneer in flying BalloonSats,
balloons with payloads including amateur radio digital communication technologies.

You can learn more about the DCC & register on-line at: www.tapr.org/dcc
Registration is preferred prior to September 17th for planning purposes, but walk-in registrations will be accepted.

If you can't attend the DCC the Proceedings can be purchased at the TAPR web site at: www.tapr.org/pub_dcc.html

Starting last year, 2008 and continuing this year DCC presentations are being recorded by Amateur Radio Video News. DVDs of the prresentations are available at:
http://www.arvideonews.com

If you have any questions you can reach the TAPR Office at: taproffice@...

Look foward to seeing many of you at the DCC.

73, Mark, WB9QZB
DCC Local Co-Host
Chicago, IL

The 2009 DCC forum & speaker schedule is attached & is available online at the TAPR web site at:
http://www.tapr.org/pdf/DCC_2009_Schedule_Preliminary2009-09-08.pdf

2078. Fwd: Alpha Radio Products Press Release

Yahoo group: IndyHamRadio

From: Mark Thompson
Topic: 2078 Message: 2078

Alpha Radio Products Press Release

Alpha Radio Products Announces

Boulder, Colorado: September 15, 2009

Dear Alpha Customer:

I have some exciting news about some big changes at Alpha Radio Products. A newly formed company, RF Concepts, LLC, has acquired all the assets of Alpha Radio Products. RF Concepts will manufacture the world-class amplifiers and other products that, for more than 40 years, our community has come to appreciate. The 3CX1500A7 triode-based Alpha 9500 Amplifier, dual 4CX1000 tetrode-based Alpha 8410 Amplifier, legal-limit Model 2100 Dummy Load/Wattmeter combo, and line of 4500 Wattmeters will continue to be handmade in our Boulder Colorado factory.

Here's the story about my involvement with Alpha Radio Products and the new company, RF Concepts, LLC:

I'm Michael Seedman, AA6DY. I was originally licensed in 1969 as WN6FUE, about the time that ETO released their first linear amplifier, the ALPHA SEVENTY. I remember reading QST, CQ, and Ham Radio Magazine cover to cover. Do you remember the Alpha ad where they put a brick on the straight key to signify "Full power, no limits"? I sure do - and ever since then I've wanted to own an Alpha amplifier. During the last 40 years, my specific interests in Ham Radio have varied. Sometimes I spent my time building receivers, sometimes building transmitters, sometimes stringing antennas in the trees, and sometimes building QRP rigs. I've even built a homebrew 4-1000A based Linear Amplifier. Recently I've spent my spare time working DX. As my friend Jack Hudson, W9MU, says, "Life is too short for QRP when you're collecting countries." So I set out to build a QRO HF station. I ordered an HF rig, strung a couple of dipoles in the trees, and went looking for an amplifier. Of course, not just any amplifier, it had to be an Alpha. A few visits to eBay later I had a used Alpha 87A in my shack.

What a difference a few watts make. It didn't take long to rack up a couple hundred countries with my Alpha 87A loafing along at 1500 watts output. Soon the dipoles came down and the two-element Steppir went up. There's nothing more exciting than a callback when you're trying to bust a pileup. I was so impressed with my Alpha 87A that I called Alpha to purchase a new 9500. I was disappointed to learn that I would not receive it for months.

Molly Hardman, W0MOM, the president of Alpha Radio Products, explained that each amp is handmade. Although she said she'd love to put Alpha amplifiers on the shelf, she has had a difficult time financing the inventory necessary to do just that. Hers was a just-in-time manufacturing environment, and she held enough inventory to work on just a few orders. She shared some of her numbers with me. Together we created a way to capitalize the company in order to put amplifiers in inventory for immediate availability. Customers will no longer have to wait weeks or months to add an Alpha product to their station.

At the beginning of September 2009, the new company RF Concepts, LLC purchased all Alpha Radio Products assets and hired the seasoned team necessary to build these exceptional products. And, we've already put some changes in effect to make sure we serve our customers even better than before. There's still a lot of work to do, but we're very excited about the prospects.

Here's the lineup at the new RF Concepts, LLC:
* Molly Hardman (W0MOM) will head up our sales effort as the new Vice President of Sales.
* Brad Focken (K0HM), and Glenn Pladsen (AE0Q) will continue their awesome work on the front lines of engineering, service, and support.
* Gordon Hardman (W0RUN), the designer who, along with Brad Focken (K0HM), engineered the award-winning Alpha 9500 and Alpha 8410, has joined the company as Vice President of engineering to develop new Alpha-branded products. He's got some great product ideas and is turning those ideas into reality.
* Steve Farkas (WA2NFR), a seasoned executive and very creative engineer, has joined the company as president, responsible for overseeing and operating RF Concepts, LLC.
And here's what it means for our customers:
Effective September 1, 2009, we've lowered pricing on all Alpha products:
* The Alpha 9500 Amplifier will be reduced from $10,150 to $7,950.
* The Alpha 8410 Amplifier will be reduced from $5,895 to $4,995.
* The Alpha 2100 Dummy load with its integrated wattmeter will be reduced from $1,950 to $1,495.
* The Alpha 4520 Wattmeter will be reduced from $1,195 to $995, the Alpha 4510 Wattmeter will be reduced from $1,095 to $945; its front-panel-less computer-connected cousins, the Alpha 4505 and 4515, will be reduced to $545 and $595 respectively.
· All customers who have orders pending with Alpha Radio Products will receive their new Alpha amplifiers from RF Concepts at the new, lower price. Any deposits made at Alpha Radio Products will be applied as discounts to your RF Concepts invoice. For instance, if you ordered an Alpha 9500 at $10,150 and sent Alpha Radio Products a $5,000 deposit, RF Concepts will deliver your Alpha 9500 for $7,950 - $5,000 = $2,950, plus any applicable shipping and taxes.

· If you're the original owner who received an Alpha amplifier from the factory during the period between March 1, 2009 and August 31, 2009, RF Concepts will give you a credit equal to the difference between your original purchase price and our new price. This effectively retroactively reduces the price you paid for the amp you've already received to match our new, lower price. This non-transferrable credit can be applied toward any RF Concepts product (including any Alpha-branded product), through August 31, 2010. Use it today to buy anything in our product line, or save it and use it later on one of our upcoming products. Please understand that the credit can be redeemed only at RF Concepts and has no cash value. It's our way of saying thanks for being an Alpha Radio Products customer.

We will focus on shipping our backlog of Alpha amplifiers and building sufficient product to ship from stock. No more waiting for delivery while your amp is being built. When you're ready to place an Alpha amp at your operating position, give us a call.

We will continue to operate from the existing Boulder, Colorado factory, use the same phone number and retain the www.alpharadioproducts.com URL along with the new www.rfconcepts.com URL. We will honor our existing customer commitments, including warranties, customer and technical support, and repairs, and keep our extensive parts inventories to support the more than 10,000 Alpha amplifiers in the market.

Please visit us online, drop us a note, call us, or stop by our booth at one of the many Amateur Radio conventions and Hamfests we'll be attending this year.

We are grateful that you have chosen Alpha Radio Products, and look forward to serving you in the future.

73's
Michael Seedman, AA6DY
Chairman
RF Concepts, LLC

2079. VHF FM Mobile Advice

Yahoo group: IndyHamRadio
Date: 2009-09-17 21:34:52 UTC
From: W9FG
Topic: 2079 Message: 2079

Hello All,

I have not been active on VHF for quite a while. I am looking for suggestions for multiband mobile FM radios. Brand, model, features, you like, what bands.

I am in Central Indiana and looking for advice.

Tnx,

73 Dick W9FG

Dick if You only want VHF//UHF I have Heard this is a Good Radio

10M, 6M, 2M & 440Mhz Quad Band Radio with Dual Band Receive.

http://www.eham.net/reviews/detail/2551

A lot of people do not like having one radio do it all , Because if something goes bad You are down on all bands

Good Luck

Avoid Yaesu VHF/UHF mobiles at all costs. The intermod is horrible. All the others seem to be fairly good. The wide band receive is nice, but it adds the chances of intermod and reduces the quality of the receiver. But every radio has it... so there's no way to avoid that. We've had good luck with Yaesu on HF, but VHF/UHF has been horrible. I've heard the same thing from a lot of other schools, and a lot of other hams. If you're in the middle of nowhere, it might be ok. But in most places, you'll have all kinds of problems.

http://www.arrl.org/?artid=9182

ARRL/TAPR Digital Communications Conference Next Weekend (Sep 17, 2009) -- ARRL and the Tucson Amateur Packet Radio Group (TAPR) will jointly host the 28th Annual Digital Communications Conference (DCC www.tapr.org/dcc) September 25-27 in Chicago. The DCC has something for everyone from those new to digital modes to those experienced with digital communications including technical and introductory forums. According to DCC Co-host Mark Thompson, WB9QZB, one of the highlights of this year's DCC will be Bob Bruninga, WB4APR, presenting "Universal Ham Radio Text Messaging." The Saturday night banquet speaker will be Bill Brown, WB8ELK, a pioneer in flying balloons with payloads including Amateur Radio digital communication technologies. Brown is the publisher and editor of Amateur Television Quarterly magazine. ARRL Technical Relations Manager Brennan Price, N4QX, will be on hand to discuss the upcoming World Radiocommunications Conference in his talk "WRC-12 Agenda Item 1.19: Shaping the International Regulatory Framework for Software Defined and Cognitive Radio Systems." QEX Editor Larry Wolfgang, WR1B, and ARRL Central Division Director Dick Isely, W9GIG, will also be in attendance. The 2009 DCC forum and speaker schedule is available
online http://www.tapr.org/pdf/DCC_2009_Schedule_Preliminary2009-09-16.pdf. TAPR provides leadership and resources to radio amateurs for the purpose of advancing the radio art and is a research and development oriented group offering kits, assembled products and publications related to the intersection of Amateur Radio and digital technology.

2086. Fall 2m Sprint, Monday, 9/21 @ 7 - 11 pm Local Time

In case anyone else got a "file not found" error, there
is merely an extra space at the end of the URL.
I tried again with out the space and it worked

I'll be active for the last hour and a half tonight from just west of Champaign, IL (EN50ud). Unfortunately Indiana is an hour ahead of us so that gives me a half hour to work anyone over that way.

73, Zack W9SZ

> the wrongs in 97.113(A) (3). (20 minutes)
> www.therainreport.com/rainreport_archive/rainreport-9-25-2009.mp3

This is about the "business prohibition", and a conflict that arises
during training/drills when EMS personnel also happen to be licensed hams.

David's blog discussing this in detail is at http://n5fdl.com/
starting with his August 25, 2009 entry through (at least) the Sept 25th
entry. The gist of the "friction" is summarized in the Aug 25th entry.

On Aug 25, 2009, he wrote:

FCC staff members have recently stated an interpretation of Part 97.113(a) to mean that professional public safety workers, including firefighters, police officers, EMTs, and other personnel, may not use Amateur Radio to communicate on behalf of their agencies except during actual emergencies.

This means that a firefighter who coordinates a city’s RACES program cannot during normal times use Amateur Radio to talk with volunteers about the program. Nor may the paid professional participate in emergency drills or any other training involving amateur radio and his or her agency.

This prevents amateur operators from training for actual incidents in a realistic manner and in so doing unreasonably restricts the ability of Amateur Radio to serve the public.

We plan to file a Petition for Rule Making to provide an exception for these activities, allowing hams and the agencies we work with in serving the public to work together as closely as possible.

- end-

2094. ARRL Board Adopts Guidelines and Recommendations on the Appropriate Use of Amateur Radio

Yahoo group: IndyHamRadio
Date: 2009-09-30 00:29:29 UTC
From: Mark Thompson
Topic: 2094 Message: 2094
Attachments: 1 described; binary payloads are missing from this source WARC

ARRL Board Adopts Guidelines and Recommendations on the Appropriate Use of Amateur Radio
On Friday, September 25, the ARRL Board of Directors adopted guidelines on the appropriate use of Amateur Radiowww.arrl.org/news/files/ARRL_AppropriateUseGuidelines.pdf on behalf of commercial, non-profit and government entities, as well as recommendations for additional steps to be taken by the ARRL to educate radio amateurs and others on how to prepare and train for public service and emergency communications while complying with the current FCC Rules.

At its meeting in July 2009, the ARRL Board created an ad-hoc committee to study the issue and prepare suggested guidelines. The committee submitted its report to the ARRL Executive Committee, which reviewed and revised the document. After additional discussion among Board members by electronic mail and teleconference, the Executive Committee submitted the document to the Board for formal adoption.

Entitled The Commercialization of Amateur Radio: The Rules, The Risks, The Issues, the document offers guidelines to assist radio amateurs and anyone wishing to utilize the capabilities of Amateur Radio in understanding the FCC Rules that prohibit communications in which the amateur has a pecuniary interest, including communications on behalf of an employer. While the FCC Rules in this regard have not changed in many years, there has been increasing discussion of the issue as growing numbers of employers and non-amateur organizations recognize the value of Amateur Radio as an emergency communications resource and encourage their employees to obtain amateur licenses. Also included are guidelines for evaluating the appropriateness of Amateur Radio volunteers providing communications services to commercial enterprises and other entities for which other communications systems are available.

"The guidelines are not intended to be the last word on the subject, and surely will not be," observed ARRL First Vice President Kay Craigie, N3KN, and chair of the ad-hoc committee. "The report includes several recommendations for additional steps that the ARRL needs to take to help amateurs and the organizations we serve to better understand the Rules and to ensure that what we do to prepare to be of service in emergencies is consistent with the current Rules."

2095. New Henry County Net

Yahoo group: IndyHamRadio
Date: 2009-10-01 13:29:31 UTC
From: Robert Griggs
Topic: 2095 Message: 2095

Hello All:

This is going out to several mailing lists, so sorry if you get it more than once. Henry County now has a NEW VHF Net on Thursday evenings at 7pm on the 145.45- PL 131.8 Repeater. I would like to invite everyone to join us this evening.

I am also looking for a list of Central Indiana Nets on ANY band VHF, UHF, HF that can be posted on the Henry County Amateur Radio Club Website at http://www.hcarc.org . Please feel free to email me directly at w9mkargriggs@... with any nets that I can add to our website.

2104. IN-ARRL BULLETIN 04-2009

Yahoo group: IndyHamRadio
Date: 2009-10-13 01:23:53 UTC
From: KB9BVN
Topic: 2104 Message: 2104

IN-ARRL BULLETIN 04-2009
Oct 12, 2009 9:20PM EDT

Iowa QSO Party
Saturday October 17, 2009
Sponsored By The Ottumwa, IA ARC

By entering the Iowa QSO Party, the entrant accepts the judgments
and decrees of the Iowa QSO Party committee as final.

QSO Party Period
1400z(9AM CDT) to 2300Z(6PM CDT)

Purpose
Iowa Stations: Contact as many stations as possible.
All Other Stations: Contact as many Iowa stations as possible

Exchange
Iowa Stations: RST & County
All Other Stations: RST & State, Province, or DX Country (SPC)

Modes
Phone All phone modes including Digital Phone.
CW/Digital modes Excludes Digital Phone but includes other digital modes.
No repeater or network qsos

Bands
Contacts may be made on any amateur band except 60M and the WARC bands.
Suggested frequencies: (Plus or Minus)
CW 1810, 3555, 7045, 14040, 21040, 28040, 50.140, 144.190, 432.105 and up
SSB 1855, 3840, 7210, 14 285, 21330, 28415, 50.135, 144.215, 432.115 and up
FM 144.58

Categories
Iowa Single Op Fixed
Out of State Single Op Fixed
Iowa Single Op Mobile
Iowa multi-op Fixed
Out of state multi-op Fixed
Iowa multi-op Mobile
Out of state multi-op Mobile
Top number of counties worked
Club High Score

Scoring
QSO Points: Each complete, non-duplicate phone is worth one point. Each
complete, non-duplicate CW or Digital contact is worth two points.

Duplicate contacts are worth zero points. A station may be worked ONCE per MODE (1 cw or digital and 1 phone). Mobiles may be worked once per mode per county. Note: Working the same station on the same mode on a different band is a duplicate contact....just one contact per mode per county with any given station.

Multipliers
Iowa Stations: One multiplier for each Iowa county worked, one multiplier for each state (including Iowa) or Canadian province worked(NF, LB, NB, NS, PEI, QC, ON, MB, SK, AB, BC, NWT, YT, NU), and one multiplier for each of the current or past Iowa *Section Managers (SM1, SM2, or SM3).
Stations outside Iowa: One multiplier for each Iowa county worked and one multiplier for each of the current or past Iowa *Section Managers (SM1 and SM2) worked. (*-ones living in Iowa) Bonus Points: 100 bonus points will be awarded for stations working the sponsoring club's station - WA?DX

DX stations do not have any multiplier credit, but may be worked for QSO points

Final Score
Non-mobile stations: Multiply total QSO points by the total number of multipliers plus bonus points earned.
Mobile stations: Multiply the total QSO points from all counties activated by the total number of unique multipliers worked from all counties activated plus bonus points earned.
Club Competition: Scores attributed to any amateur radio club will be credited towards that club. All clubs with at three or more credited scores will be included in an overall ranking of those scores with a certificate awarded to the club with the highest score.

Miscellaneous
1. All stations are limited to no more than 125 watts.
2. Mobile Iowa stations who change counties are considered to be a new station in each new county.
3. Mobile stations should identify either /county abbreviation or /M
4. Mobile stations may park on a county line but each county must be worked in a separate contact.
5. Mobile stations must be in a vehicle capable of being in motion.
6. Spotting on the packet clusters or via internet is permissible, including self-spotting.
7. List of Iowa Counties and 3 letter abbreviations. All ops are urged to use these abbreviations in the exchange.
8. State and Province Checklist
9. There are no multi-op categories this year, mobile operators are encouraged to drive with a friend for safety (and better scores)!

Submission of Logs
All stations must submit a log and summary form this one by email or this one by USPS.

Logs must be submitted by November 17, 2009. Electronic logs and summary sheets should be sent to IAQSO@... Other files sent which are readable with a text editor are accepted. .BIN files should not be submitted.

Logs submitted via email must contain the call alone in the subject line (call must be that used in the log).

Note: Since this is our first go at sponsoring a qso party, it may become necessary to modify or clarify the rules. Please check back from time to time.

Send paper logs and summary forms to:
Dale Stoy NS?D
1335 N Van Buren
Ottumwa, IA 52501

Verification of receipt of the log will be made on the Iowa QSO Party website.

Comments or Questions? http://www.wa0dx.org/iaqsoparty.html

Talk to you then!

2105. VHF/UHF Digital Voice & D-STAR Forum at Ft. Wayne Hamfest

Yahoo group: IndyHamRadio
Date: 2009-10-13 21:06:45 UTC
From: Mark Thompson
Topic: 2105 Message: 2105

Since there has been some recent discussion of D-STAR on the IN_PACKET yahoo group I thought I would let everyone know
that the Ft. Wayne hamfest has asked me to return again this year to conduct a forum.

I plan to conduct a VHF/UHF Digital Voice forum at 12:45 pm on Saturday. I will show the VHF/UHF Digital Voice video by Amateur Radio Video News. The video is excellent and primarily covers D-STAR,
but also touches on amateur use of P25. After the video I will follow-up with a brief overview of D-STAR.

I also hope the Indiana D-STAR repeater operators can attend the forum and briefly talk about their systems
in Indianapolis & Lafayette and perhaps plans for new D-STAR repeaters in Indiana.

I look forward to seeing many of you at the hamfest & the forum.

The D-STAR simplex frequency at the hamfest will be 145.67 MHz.

73, Mark, WB9QZB

2106. Power supplies for home-brew projects, and older laptops.

Yahoo group: IndyHamRadio
Date: 2009-10-14 12:56:59 UTC
From: kc9brz
Topic: 2106 Message: 2106

Computer Express (formerly Computer Rennaisance), 5880 E. 82nd St, Indianapolis, (near Best Buy in Castleton), phone 317-842-2000, has boatloads of older laptop power supplies/adaptors. Those are the
15 to 18 volt variety.

For 4 to 12 volt power supplies (wall warts) for smaller projects, check out any independent cell phone store, such as Revol dealers, and pre-paid cell phone stores. Some are:

Beeper Express, 6001 Massachusetts Ave, Indianapolis - (317) 549-3993
Beeper Express, 2918 W 16th St, Indianapolis - (317) 624-0051
Page Express, 3018 W 16th St, Indianapolis - (317) 464-9615

There's also a computer recycling place, I forget the name, but it's
on the 4300 block of Sellers Street, just off Pendleton Pike, near the Intersection of I-465, Pendleton Pike, and E 42nd Street. Ph: 317-545-2420, or 545-4195. They also usually have lots of wall-warts.

2107. New 23cm (1.2 GHz) D-STAR Group

Yahoo group: IndyHamRadio
Date: 2009-10-15 09:45:38 UTC
From: Mark Thompson
Topic: 2107 Message: 2107

A new group, D-STAR_23cm has been created to discuss the use of D-STAR Digital Voice (DV) and High-Speed Data (DD) on the 23cm (1.2 GHz) band
using the Icom ID-1 mobile, IC-9100 transceiver, RP-1V & RP-2V Digital Voice Repeaters, RP-1D & RP-2D Data Access Points
and applications using both the 23cm High-Speed IP Data(DD) & the Digital Voice(DV) Low-speed Data capabilities.

The group can be joined & accessed at: http://groups.yahoo.com/group/D-STAR_23cm/

Look forward to your participation in the group.

2109. New CW Training - FREE

Yahoo group: IndyHamRadio
Date: 2009-10-19 02:04:07 UTC
From: KB9BVN
Topic: 2109 Message: 2109

The Midstates Amateur Radio Club is going to start a CW training course the first week of December, providing we have enough interest. The CW training will be the Chuck Adams K7QO CW Course. If you are interested in being a student please let me know. Right now it looks like we will be on the air from about 6:20PM to 7PM Sunday Nights on the MARC repeater system. The frequency for this system is 146.835 with a PL of 151.4

If you are interested, you will need to have a computer with a CD ROM drive, the course is on CD ROM and I will be making copies to give out at the November MARC meeting (November 21st). You need a MP3 player, or software on your computer than can play MP3 files.

The CD ROM can also be downloaded from: http://www.kkn.net/~k7qo/

It is 400MB is size and this is an ISO file. You use the ISO file to make the actual CD ROM. If you do not know how to deal with an ISO file, just come to the meeting and get a copy of the disk from me. If you can't make it to the meeting, I will burn you a CD ROM, and mail it to you for $3.00 - this covers my materials and mailing. Just let me know how you want it.

The class will be about 5 mins of instructions, 20 mins of CW copy, and 5 mins of QA. There is over 10 hours of MP3 recordings in this free course, if you can spend a mere 15-20 minutes a DAY listening to the lessons, and following Chuck's instructions in the manual, you'll be able to send and copy CW at a decent rate in less than a month. Imagine being able to particpate in Straight Key Night on New Years Eve!

The over the air CW sessions will give you all a chance to copy in a more realistic environment than just listening to the MP3 player. I figure these sessions will run Dec and Jan, and then if the interest is there we can run it again in the spring.

100's and 100's of hams have used the K7QO CW Course to learn Morse code, you can too, but I must warn you...CW is addicting and FUN!

2118. Georgia Statewide ARES Network Receives Funding $$$ for D-STAR Equipment

Yahoo group: IndyHamRadio
Date: 2009-10-30 15:58:36 UTC
From: Mark Thompson
Topic: 2118 Message: 2118
Attachments: 1 described; binary payloads are missing from this source WARC

Great example of what's possible with good planning.

See message below & attached presentation.

$$$ Georgia statewide network receives funding $$$
    Posted by: "WB4QDX" wb4qdx@... jdavis6129
    Date: Thu Oct 29, 2009 4:38 pm ((PDT))

An official announcement will be released in the next few days, but it can be announced to the Amateur community that $165,000 in Federal funding has been secured by Georgia Emergency Management Agency (GEMA) to complete the statewide Georgia D-STAR network. Equipment has already been ordered and is beginning to arrive.

This is a project that began back in 2005 with a vision for Amateur Radio emergency communications in Georgia. Georgia Public Broadcasting's former Director of Engineering Mark Fehlig, WA6NGC, seized an opportunity to install two Amateur Radio antennas on each of nine tall television towers that provide statewide Public Television coverage as a part of the required conversion to Digital Television. Fehlig designated Georgia ARES to control the use of these facilities for emergency communications.

The next task was to determine what technology or mode would provide the best use of these sites for emergency communications. After considering many modes and technologies including linked FM repeaters and packet. About this time, the D-STAR digital technology was emerging as a state of the art platofrm for voice and data communications. D-STAR allows flexible linking of repeaters and provides simultaneous voice and low speed data along with high speed data with Internet connectivity on 1.2 GHz.

2 meter, 440 and 1.2 GHz voice and data repeaters will be installed on each of the nine television towers of Georgia Public Broadcasting (GPB). These nine towers are strategically located to provide near statewide Public Television coverage. They will also provide similar Amateur Radio coverage from two antennas located between 500 and 600 feet above ground and connected with 1 5/8" transmission lines. GPB will also provide indoor equipment space with backup power at each site. Connectivity on GPB's robust DS-3 data network will be provided with Internet access to allow flexible linking of repeaters using the D-STAR technology. Two of the D-STAR repeaters are already in operation at Pembroke, Georgia near Savannah and atop Stone Mountain serving the Atlanta metro area.

The funding also provides 20 dual-band D-STAR radios for installation at EMA offices around the state, a portable UHF D-STAR repeater for emergency deployment, three 1.2 GHz D-STAR radios with laptops for sending data and photos from field locations and a robust reflector to serve the Georgia network during emergency conditions and available for general use during non-emergency times. The complete Georgia D-STAR network should be in operation by early 2010.

The Georgia network will complement other D-STAR systems planned or in operation in neighboring states of Alabama, Florida and South Carolina creating regional capabilities in the Southeast. Weather systems approach Georgia either as severe thunderstorms and tornadoes from the West or tropical systems from the Gulf or the Atlantic. Having flexible statewide communications will provide new capabilities to support emergency communications.

John Davis WB4QDX
District Emergency Coordinator
Georgia ARES

2119. Packet Question

Yahoo group: IndyHamRadio
Date: 2009-10-30 17:23:12 UTC
From: KB9BVN
Topic: 2119 Message: 2119

I have a KAM all mode TNC Version 5.0

I have the manuals. I have a Yaesu FT-2600. I have an IBM laptop.
So let's say I want to get on 2m Packet.

I see where I need essentially a modem cable from the 9 pin male serial port
on the laptop to the 25 pin female port on the TNC. No problem, I have
that cable.

Now I need to connect the radio to the TNC. The FT 2600 has a 9 pin data
port:

Pin 1 - Squelch Signal Output
Pin 2 - Packet RX data Output 9600
Pin 3 - Packet TX data Iutput 9600
Pin 4 - Packet RX data output 1200
Pin 5 - Ground
Pin 6 - Nothing
Pin 7 - External PTT Signal Input
Pin 8 - DC Output (5v at 50ma for powering an external device)
Pin 9 - Packet TX data input 1200

The KAM has a 9 pin male data port:

Pin 1 - AFSK out - Carries tones to the audio input line of my radio.
Pin 2 - XCD - Used to connect squelch line from radio, if desired.
Pin 3 - PTT - Controls the PTT line in my radio. Switches rig between xmit
and recv
Pin 4 - Same as Pin 5
Pin 5 - Audio Signal input - use with external speaker jack, or pin 4 of the
radio?
Pin 6 - Ground
Pin 7 - +12VDC input - can be powered here instead of a external powe
rsupply. CUT OFF if not using. It is HOT when TNC is on.
Pin 8 - Same as Pin 6
Pin 9 - Same as Pin 6.

SO...do I have this right? I need a cable that has:

KAM Pin 1 to Radio Pin 9
KAM Pin 2 to Radio Pin 1
KAM Pin 3 to Radio Pin 7
KAM Pin 4 to NOTHING
KAM Pin 5 to Radio Pin 4
KAM Pin 6 to Radio Pin 6
KAM Pin 7 - Not Used
KAM Pin 8 - Not Used

KAM Pin 9 - Not Used

I appreciate any help I can get. The KAM software is on 5.25 floppies. I do not have a computer that can read these...

HOST MASTER 64 is one disk....is that for a Commodore 64? Version 1.18 64/128 COMBO SIDE 1 and 2 - I have no idea what this is.

2128. [InHam] [IndyHamRadio] IRC meeting at Ft. Wayne Hamfest

Yahoo group: IndyHamRadio
Date: 2009-11-08 13:51:49 UTC
From: Charlie - N9MEW
Topic: 2128 Message: 2128

Attention all Repeater trustees, and all interested in Repeater coordination

The Indiana Repeater Council will have a meeting at the Ft. Wayne Ham fest on Saturday, November 14, 1009 at 12:15.

We will be talking about what to do about paper repeaters and the possible use of the splinter frequencies on 2 meters. There are several 20 kHz spaced frequencies, and it is sometimes possible to place another system in between 2 systems. What kind of spacing should we use?

2129. 146.625 in Indy.

Yahoo group: IndyHamRadio
Date: 2009-11-10 00:17:40 UTC
From: kc9brz
Topic: 2129 Message: 2129

I can no longer raise the 146.625 repeater. Last I heard
it was located on the Lugar Towers building in downtown Indy.
Did they add a PL tone? Is it down? Will it be coming back?

Does anyone have any info?

Thanks.

Dave, kc9brz.

2130. RE: [IndyHamRadio] 146.625 in Indy.

Yahoo group: IndyHamRadio
Date: 2009-11-10 00:28:35 UTC
From: Ken Bandy
Topic: 2129 Message: 2130

According to N9FEB's Wednesday night ARES net announcements, "The downtown repeater, 146.625 is currently off the air. The IRA apologizes to all those who use this repeater. There has been a change in access procedures at the repeater site and they are working to get it back on the air."

73,
Ken

Brian,

N9LYA's NOIRAM Node in Indy (High Profile) is off the air for the moment maybe back on within two weeks or less. Tippecanoe County is on 145.050 also. Of course other portions of southern Indiana are all on 145.050. Northeast still on 145.530 for now.

From: KB9BVN
Topic: 2133 Message: 2137

Thanks Don and Dan

My station is a 50 watt FT 2600 with Kan KPC-2 and a copper pipe J-pole. I am on 145.050 and KB9BVN-1 is the PBBS, KB9BVN-2 is the node (not sure what node means hahaha).

I was able to have a QSO with W9DEW last night so I know the rig and TNC are working.

I'll leave it there for a few days to see what I can hear. I can not hit the Digi in Colverdale, nor the DX Cluster in Plainfield.

Hi guys,

I love hearing people talking about packet! I only wish that I could remember enough to help out with even the simple questions... sigh!

Good ole NOIRAM --- it's probably been better than 15 years since I came up with that! Way back in the days when it was me and KK9G serving a HUGE number of people on our BBS's. Heck, I've been out here in the woods of Owen County for over 12 years already, so that was when I shut the BBS down. Guess that I MUST be having fun, cause the time is sure flying by.

Enjoy Packet!

.and poke Jerry - N9LYA if/when you get a chance!

Mike (N5CEC --- I think.)

Oh yeah ... I could get into the 525 machine most of the time from Champaign IL. I kinda miss it.

I used to work Marty all the time on 144 SSB. I don't know too many regulars in Indiana on VHF SSB now. During VHF contests there's K9MRI, W9ICE (although I haven't worked W9ICE in a while) and Dan K9ZF gets on as a Rover sometimes.

Yes, N9GMU has been a silent key for several years now. He lost interest in ham radio, sold all of his gear at a yard sale, & switched entirely to internet chat rooms. He then passed away a couple of years later.

It's a good thing that we never had any fun! I can still remember some of the critics --- those who couldn't believe that we could behave like that on the radio. But none of them EVER missed a day of "monitoring", as they tuned in for the days entertainment!

I still cross paths with Bob (VZY) every once in a while. He is still doing contract radio engineering work for several radio stations around the state. It's been years since I have heard from Alan (WG6I - the official "THE BIG ONE" voice), or Tom in Bloomington.

I remember VZY being very particular about the
way the repeater sounded. At one time, I think he
was running an Optimod or some other broadcast
modulation optimizer to compress and optimize the
modulation level so that everybody seemed to have
great audio through the repeater. Not many
repeaters do that and you end up with some people
that blow you out of the car while others are barely copiable.

What really annoys me are the repeaters with
courtesy beeps and IDers that are too loud.
Remember how VZY used to set the deviation of the
IDers on the link repeaters real low so you could
barely hear them? Made some of the "repeater
police" think that he wasn't IDing the link transmitters.

WG6I. I won't mention here the phonetics that
were made up for his call sign, but the first two
words were "World's Greatest". <grin> Alan was
one of the first guys I knew who was really into
satellite TV. I remember visiting his house, must
have been 1992, and he was watching the Olympics
on a big projection TV and seeing sports that you
couldn't see on the normal broadcast or cable channels.

As I recall, the Bloomington guys kinda got hosed
when the Freetown repeater went on the air.
Wasn't Bloomington in the overlap between the two
transmitters and they heterodyned on most receivers?

Gee, Marty gone. There was another guy, Don
KA9___, who I think is gone. My friend and
co-worker N9MUU moved to Texas and then died. Is
WA9HNK still around? Who was the cable TV
installer that lived near you and me who was
always a good source for leftover lengths of 75
ohm hardline? I think some of that's still in use on the Freetown tower.

Bob...

Yes, not to mention ☐TRUE FM☐ Motorola transmitters and receivers. REAL
boat anchors by today☐s standards!

>>> What really annoys me are the repeaters with
courtesy beeps and IDers that are too loud.
Remember how VZY used to set the deviation of the
IDers on the link repeaters real low so you could
barely hear them? Made some of the "repeater
police" think that he wasn't IDing the link transmitters.

I don☐t remember exactly how he was doing that. I do know that he would
inject the CW ID on the transmitter end, and then filter it back out on the
receiver. Very clean, very professional sounding audio --- much better than
most of the commercial stuff that I hear.

>>> WG6I. I won't mention here the phonetics that
were made up for his call sign, but the first two
words were "World's Greatest". <grin> Alan was

Last contact with Alan, he was working in Ohio (Cincinnati??). He and Jill
(longest distance between any two points is a shortcut) had divorced and she
was back in California.

>>> As I recall, the Bloomington guys kinda got hosed
when the Freetown repeater went on the air.
Wasn't Bloomington in the overlap between the two
transmitters and they heterodyned on most receivers?

Not sure --- was it 147.135? And WHY would I remember that? I haven□t even had a radio turned on in years --- well, I purchased a new Kenwood 700 right before the 710 came out, and used it for about two weeks .

>>> Gee, Marty gone. There was another guy, Don
KA9___, who I think is gone. My friend and
co-worker N9MUU moved to Texas and then died. Is
WA9HNK still around? Who was the cable TV

always a good source for leftover lengths of 75
ohm hardline? I think some of that's still in use on the Freetown tower.

I hate to think of all of the hams that I have known throughout the years --- every one of them was special in their own way. Yes, the license was a □right of passage□ I suppose don□t get me started!!!

Tom N9PDC went over there recently and serviced Bob□s (HNK) furnace, so yup, he□s still kickin□!

You are thinking of Mike, NX9Q. He would beg us to come and clean out the warehouse that was full of those huge wooden spools with □only□ a couple hundred feet of ¾ inch line on them. I used that stuff when I put up the packet node down there a hundred years or so ago!

Mike

I have to head out to Chicago for a week of training with EMC tomorrow. I have my packet station on the air at 145.050...would love it if a few of you could try to connect and leave me a message.

KB9BVN-1 is the PBBS

I will take the system off the air at about noon tomorrow, and it will be back up next weekend.

2150. Re: [InHam] [IndyHamRadio] IRC meeting at Ft. Wayne Hamfest

Yahoo group: IndyHamRadio
Date: 2009-11-16 14:45:22 UTC
From: Charlie - N9MEW
Topic: 2128 Message: 2150

This is the follow-up of the Indiana Repeater Council meeting on Saturday.

I have many requests for a repeater that I cannot find a frequency for. Especially for 2 meter systems.

As a start to find the paper repeaters, we have voted unanamsly to NOT list a repeater in the ARRL directory for a system that the coordination is too old.

Indiana requires that all coordination's be updated every two years.
As a courtesy to the ones that are a little behind, and to give every body a chance to update their coordination, we have decided that If your coordination is 2005 or later, you will be in the published directory. Next year we will move the data up.
We file the data base with the ARRL about January 1 of each year.

We are not deleting anything them from the data base at this time. But this does not mean that we will just let it go. If we do not hear from you, we will try to contact you. About this time next year, we will be analyzing the date base and will begin to de-coordinate systems.

I will be going on vacation the day after Christmas for a week or so. File NOW.

If you submit an application before I leave, and I do not mean December 24, I will fix the data base so that you will be listed. Depending on how many of you file, It may take a while to complete the paperwork. I will answer all e-mails.

You can file on-line at www.ircinc.org/node/9

If you know of any repeaters that are off the air, please e-mail me. Keep in mind that people have problems, such as equipment fails, and loss of tower sites. If this applies to you, let us know.

Splinter frequencies. This was discussed. We will space systems 70 to 80 miles from a system that is 10 KHz away. This is we done only in special circumstances.

There will be other restrictions, such as a non inference clause. and limit modulation. We will also have to get approval from the adjacent states. I have requested that they adopt such specs. But they have not approved it yet.

Attention all Repeater trustees, and all interested in Repeater coordination

The Indiana Repeater Council will have a meeting at the Ft. Wayne Ham fest on Saturday, November 14, 1009 at 12:15.

We will be talking about what to do about paper repeaters and the possible use of the splinter frequencies on 2 meters. There are several 20 kHz spaced frequencies, and it is sometimes possible to place another system in between 2 systems. What kind of spacing should we use?

Thanks and MUCH apprecation to not only the repeater council
but all the repeater owners/operators and the many people
who contribute money to keep them on the air.

I wish I could afford to join/contribute to every club
that maintains a repeater in or around Marion County.

In Marion County, except for nets and special events, 2-meter
activity seems to be dead on all repeaters except the 146.70.

But when winter storms, tornados (tornadoes?), or the big
New Madrid Fault earthquake hits, I'm sure most of them will
be quite busy.

Any-who, you might catch me on Tuesdays around 5:30pm
making the rounds checking to see if I can raise about 25 2m
repeaters around Marion county and surrounding counties.

Berdell Smith (WB9UYU) SK Estate Sale
These are the remaining items left over from the hamfest, we will be posting some club members items for sale within the next day or so also.

Ten Tec 544 HF Transceiver includes 245 & 249 filters and noise blanker kits, manuals etc. ($350)
Ten Tec 242 Remote VFO with manual ($60) (With the Remote VFO this allows you to do split operations)
Ten Tec 262M Power Supply with manual ($60)
Ten Tec KR-50 Paddle Keyer with manual ($60)
Ten Tec 291 Manual Tuner with manual ($70)
$25 Discount if you purchase the entire HF Station for $ 575

Kenwood TR-7400A VHF Mobile ($55) (Feedback from speaker when volume @ 12 o'clock position)
Pace Communicator II VHF Mobile ($45)
Homebrew Antenna Switch ($20) (With plans from October 1957 QST)
Homebrew Keyer Interface ($10)
Heathkit HD-1410 Keyer ($40)
Heathkit HM-102 SWR/Watt Meter ($40)
Brown Brothers BTL-A Key ($75)
Autek MK-1 CMOS Keyer ($40)
SWR Bridge Meter $15
ICOM 2AT box, manual and new earphone (NO RADIO) ($3)

All the items listed above are in very good physical condition, were tested and appear to work fine except when noted.

Yaesu FRG 7000 Receiver ($75) ☐ Powers up, no receive

Please contact the Whitley County ARC if you have any questions or if you are interested in this equipment.

2157. 2009 NWS SKYWARN Recognition Day

Yahoo group: IndyHamRadio
Date: 2009-11-24 18:03:57 UTC
From: Dan Dahms
Topic: 2157 Message: 2157

We invite you and your fellow hams to help setup, operate and teardown for this event. Remember this is a 24 hour operation and we need your help for all hours of coverage. Please pass this on to your members and other clubs etc. We will have (2) HF stations in the meeting room setup and of course the VHF/UHF radios will be available at the WX9IWX console in the operations room.

Dan M. Dahms N9WNH
President
Whitley Co. ARC

CQ…CQ…CQ…
National Weather Service
Special Event
2009 SKYWARN Recognition Day
(December 4, 7 pm EST to December 5, 7 pm EST)

SKYWARN Recognition Day was developed in 1999 by the National Weather Service and the American Radio Relay League. It celebrates the contributions that volunteer SKYWARN radio operators make to the National Weather Service. During the day SKYWARN operators visit NWS offices and contact other radio operators across the world.

WX9IWX, National Weather Service Northern Indiana's amateur radio station, will once again be participating through the entire event. Contact us on 2/10/15/20/40/80m and 70cm via PHONE, CW and PSK-31. Look for around 90 to 100 registered offices to participate again this year.

For more information visit the 2009 SKYWARN Recognition Day website at http://hamradio.noaa.gov. At this website, you will find the latest information regarding this event. There is also information on how to receive your event certificate for the stations you've contacted and QSL information for WX9IWX (to be posted soon) and other stations providing QSL's.

As always, thank you for your commitment to the National Weather Service SKYWARN program.

Operators are needed for WX9IWX at the National Weather Service this year. Please contact Pat Murphy, WX9PAT at patrick.murphy@ noaa.gov for more information. Please help pass the word about this great amateur radio event. A special thanks to the Hoosier Lakes Radio Club, the Whitley County Amateur Radio Club, the Goshen Amateur Radio Club and all other volunteers for their assistance with this and past year's events.

2159. matching antennas for a mobile quad band 10/6/2/70cm.

Yahoo group: IndyHamRadio
Date: 2009-12-03 14:02:26 UTC
From: kc9brz
Topic: 2159 Message: 2159

Anyone have a recommendation for one or two
mobile antennas for the Yaesu quad band FT-8900R ?

It's 10m/6m/2m/70cm.

Antenna gain is more of a concern than price.

So if it will improve antenna gain I'd consider two
antennas with an antenna switch (the FT-8900R has
only one antenna-out connector), such as combining
a 6m/2m/70cm antenna with a 10m antenna. Or else
a 10m/6m antenna with a 2m/70cm antenna.

I also don't want something that's going to have to be
taken down for drive-throughs and parking garages,
so not too tall either.

Anyone out there using this radio?

2161. Re: matching antennas for a mobile quad band 10/6/2/70cm.

Both Diamond and Comet have four band antennas designed for the FT-8900. Both are about $110 and about 51 inches long.

Comet: UHV-4 (redesign of the UHV-6 multi band ant.)
Diamond: CR8900 (modified HV7A)

I have one of these radios. I bought a quad band antenna for it. It had a heavy magnetic base, and it was stiff. And I think it would not go under doorways,.
I replaced this antenna with a 6 meter antenna and a 2M/440 antenna.using a splitter.
I just cannot do 10 meters.

I like the radio.

2163. Hams volunteering in a Disaster Relief Operation

Yahoo group: IndyHamRadio
Date: 2009-12-03 16:01:31 UTC
From: Greg
Topic: 2163 Message: 2163

There was concern over the Red Cross requiring a background check. If you consider that a Red Cross volunteer will have to be responsible for large sums of money and resources (Client Services), will be providing shelter for those who are vulnerable such as children or seniors). Just because you have a license from the FCC does not mean that you could not be someone who would victimize others.

Local Community Volunteers in a DRO (Guidance)

I n a Disaster Relief Operation, any affiliated Red Cross volunteer could potentially be paired up with a local community volunteer, also called a "spontaneous volunteer." It is important for every one of our volunteers and staff members to recognize spontaneous volunteers, their ID Badges, and their limited activities. The following ID Badge will be issued from the greater Indianapolis chapter in the case of a local D.R.O.

Since spontaneous volunteers (SV) have not been cleared through a Background check, which usually takes 2-3 days to process, there are a few things for affiliated volunteers and staff to keep in mind as we serve together in our designated activities. As shown on the backside of the ID Badges, these guidelines were established to ensure the safety of our clients, volunteers, and staff as we provide relief services in times of a disaster. It is the responsibility of all Red Cross volunteers to ensure the above guidelines are met, as you are the eyes and ears for the organization. Your compliance and understanding are very much appreciated!

Typical badge for a spontaneous volunteer

front:
SPONTANEOUS VOLUNTEER
RESTRICTED ACCESS
DR # xxx-xx
Name: JANE DOE
Expiration Date: (7 days from time of placement)

back:
As a spontaneous volunteer, you are
asked to please follow these guidelines:
☐ Team up with an affiliated Red Cross volunteer throughout your shift.
☐ Please do not handle money, drive a Red Cross vehicle or work overnight shifts.
☐ Do not work directly with vulnerable populations (such as children or seniors).

From: Zack Widup
Topic: 2163 Message: 2164

What the Red Cross originally wanted to do went far beyond a simple
background check. I don't mind if they want to see if people have police
records, but a credit check or something similar is unnecessary in my eyes
and none of their business. It also can affect people's credit ratings
negatively. Also unneeded is a lifestyle check or whatever they call that.
I think this whole thing was discussed with ARC, and something more amenable
than the original proposal was worked out with the amateur radio community.

>>> As a spontaneous volunteer, you are asked to please follow these guidelines:

So, the Red Cross has alienated a whole bunch of Amateur radio folks --- people whose identity is known, people that talk with one another every day. But then they are "asking" that somebody off of the street will do something like stay away from the money.

Yeah, that all still makes good sense to me (dripping sarcasm). And folks wonder why I have no interest in amateur radio anymore --- well, I probably don't have the right color ID card for that. sheesh!

Don't get arrogant. Any Ham can be a Spontaneous Volunteer in a DRO.

Do you realize how fast you could create a CNN moment? Yes we talk with each other, often daily. But do I really know you? We just had a 26 year old female from Fountain county convicted of sexually molesting her cousin's child. One would expect cousins to know each other even better than Amatuer radio operators would each other.

Try the background investigation for a State job. Or even a SECRET clearance. We even now require information to get a drivers license. We no longer live in small towns, people move frequently.

The facts of life is that the American people are no longer a moral population. All of the things that used to make us behave (family, church, community) have been marginalized. You may still live by the old ways, most Americans see that lifestyle as foolishness.

Yes, everybody has to do background checks. You have to have ID just to vote. In many cases how do we even know that you are who you say you are?

Look, I grew up in small town America. Everyone knew my family back three generations. If I went to vote, the folks at the polls knew my family. One's word was one's bond. But that all died in the 1970s.

You can still volunteer during a disaster. But you will be limited to being a spontaneous volunteer. And it is even worst if you work with the police or fire departments as a volunteer. If they do not really know you, they will not trust you.

I do not mind the back ground check as I have had 3 of them in the last10 yrs due to my past employer BUT the back ground checks were done via a Police Dept. not a private org The RC uses a Hired private org. This Private org keeps file on them in there own data base NOW just how safe is that? that is what I object to along with the credit checks.

Arrogant??? Kiss this.

In my 10 years in the military, I had what was referred to as a "top secret crypto" clearance, and was stationed at various border sites in Germany that I can't even talk about. I DO know what it is like to have all of those background checks done. Lots of luck if you happened to have a German girl friend --- they called that "close and continuous relationship with a foreign national", and you could end up playing KP for months! I got to see a huge turnaround as "access" was granted or denied to people that I worked with everyday. A "secret" clearance wouldn't even allow you on site!

Once upon a time, long, long ago, I was quite active with the Red Cross in Indianapolis. I taught basic electronics for several of the amateur radio classes, and participated in several drills. The one that I remember best was when they dispatched a group of us to the airport to aid the injured. I feel that it is the RED CROSS that has become arrogant! Their entire operation is based on a volunteer force, but they want to choose the ones who get to help out. In spite of 30 years of experience in amateur radio, they would turn me away at the door as they wait for somebody with the correct color ID card to show up to operate their station.

Arrogant --- yeah ok. But you can keep your toys, cause I'm not even interested in playing that game. ESPECIALLY with the Red Cross!

They just convicted a 26 year old female in Fountain county for sexually molesting her cousin's child. Do you realize that those who "like little boys" are very good at hiding such behavior?

Likewise can you be trusted with money? How do I know? Want a list of people convicted just this year for stealing money from groups like the Cub Scouts?

This is not the small town world of the 1950s. The world changed in the '70s. Americans are no longer a moral people. Family, religion, community are seen as mere words and out dated ideas. It is now normal to change jobs every couple of years. And move your household just as frequently. No one knows anyone else. And likes it that way.

Just remember that we now require ID just to vote. And ID when we are working.

Besides everyone is worried that you could create a CNN moment that would make national news. And some loud mouth, even a ham, could create problems that can effect politicians, law enforcement, and community organizations.

Again, I do not speak for Red Cross, ARES or any other group.

All I am saying is that this is universal. The world changed after 9-11 and Katrina. Standards are higher.

So you were a SIGINTer. You know the drill. Now that is becoming normal for disasters. If you do not want to play by the rules, fine. But you will be on the outside looking in. And it is not the Red Cross that requires such measures but the federal government.

How do you think you will be treated by local law enforcement? So what if you are a "Former" intel geek (SIGINT). The thing is that was in the past. No one knows you now.

ARES requires higher standards. So does MARS. And Red Cross, a long with a lot of other volunteer groups, is being forced to meet the same standards. If anything CNN now has more power to make or break even the military than what you dealt with when you wore the green suit.

Again, the world has changed due to 9-11 and Katrina.

First off, I do not speak for the Red Cross, ARES or any other organization.

Second, everyone is contracting out investigation. Most of the background checks done by the Federal Government (SECRET, TS clearances) are being conducted by Special Agents who are contract employees.

Just remember that there are huge databases out there with all of your financial information, your medical records and other information about you. All controlled by private industry. BTW, would you really want your medical records to be controlled by the government or a private firm?

Third, the use of Spontaneous Volunteers (SV) has a long histroy in groups like the Red Cross or Salvation Army. During a disaster, you will get lots of volunteers and no time for a background check. Hams can be SVs. Therefore if you want to volunteer, go a head.

I would say that the ICS (NIMS) courses are mandatory for ARES, Red Cross and MARS. There are now higher standards of training for all of these organizations.

For MARS it is not only the NIMS courses but MARS Basic Training, MARS 101 plus so many hours of net participation to include being net control.

Depending on the county, ARES can require similar levels of training just to stay in active status.

Red Cross re-did all of their courses after Katrina. Volunteers are expected to have the NIMS courses, "Fulfilling our Mission", Sheltering (operations and simulation), Mass Care, Client Casework and several other courses.

Training has also increased for those in the military, in government and even police reservists.

Maybe your county EC is not holding your ARES members to the standards required.

Mike,

I work in public safety communications, and have for several years. After Hurricane Katrina in 2005, everything changed regarding communications during disaster, as well as how agencies, along with amateur radio ops, respond to disasters. The National Incident Management System (NIMS) was created. It has standardized response procedures, a standardized command framework, as well as communications standards.

The reason that NIMS was invented was to avoid the communications and response weirdness that hampered the evacuation and recovery from Katrina. With standards that all responders follow, the response from all agencies is the same. Command and communications are established, along with all the other logistical, financial, etc considerations at a disaster scene, and everyone knows their place within the structure. All public safety agencies are already, or are in the process of becoming, NIMS compliant. NIMS compliance is mandatory in order to get federal funds for interoperability, etc.

Standardized procedures make for a better response from everyone in time of trouble. I don't believe that these are being "crammed" down anyone's throats. It's just a new, better way of doing business. Those who learn NIMS, which is undoubtedly behind the Red Cross's rules, are better prepared to help when needed, as they know their place in the response framework.

A well trained volunteer amateur operator is a help, not a hindrance. Plus, I believe that the training can weed out the folks who are only looking for an adrenaline rush instead of showing up to help.

My $.02,

Alex
AA9XY

>Cross and MARS.

Are you saying that this training is mandatory for ARES? By whose authority? Funny that we don't see anything from the ARRL Indiana Section Manager or the ARRL Indiana Section Emergency Coordinator about mandatory training. The last word from the SM about training was in his September 2009 newsletter where he said the following:

"By now you should have seen or heard of the new training program for ARES. There have been some comments about it and it is being constantly updated by Tony as suggestions come in from different individuals."

The Indiana DHS Ham Team group has since rolled out a training program consisting of a series of Power Point presentations. They are recommending that local RACES and ARES groups follow this training. The Indiana SEC (the "Tony" referred to above) collaborated with the Indiana DHS Ham Team in developing these presentations. But that's the extent of the training effort I've seen coming from the Indiana ARES organization.

>Depending on the county, ARES can require similar levels of training
>just to stay in active status.

I have no doubt that's true in some part of the country. I just haven't seen a big training push on the part of Indiana ARES.

I won't deny that training for volunteers is a good idea. I've completed some of the FEMA ICS courses myself. While disaster volunteers need to understand ICS, the volunteers serving as communicators really need communications training and they won't get that from just ICS courses. As Mr. Wolford points out, his experience as a communicator would be much more valuable to me if I were an ARES team leader than proof of his completion of ICS courses.

At 12:52 PM 12/3/2009, Greg wrote:

1. IF you, as a ham, create a "CNN moment" where your screwing up during a disaster becomes a national media field day then you would find a whole world of hurt coming down not only you but the amateur radio community. Leaders in every organization fear that just one member of their organization could destroy everything by becoming a focal point for the media. Military leaders fear that (it is a career killer). But it also effects politicians, community organizations and so forth.

2. "WE" is everyone. Our world has changed. We, as the American people, no longer are a nation of small towns. Everything is urbanized. It makes it harder to know folks. Think of how many times we have had a serial killer or child molester that everyone thought was a good guy. BTW, if your the moderator and you can not read the message traffic to locate my callsign then what least are you missing in life? What is your level of situational awareness? (BTW, I have 50 years of being involved in amateur radio. And just did a combat tour in Afghanistan.)

3. The state of Indiana went to requiring ID just to vote due to the fact that no one knows anyone anymore. And groups like ACORN do exploit that weakness. Thus the need for background checks within organizations.

4. Red Cross has made allowances for volunteers like hams. It is called being a Spontaneous Volunteers (SV).

Here is one county's training for ARES. They may not be typical but they do have about 35 members who are actively meeting these standards.

http://www.w9tca.com/training
http://www.inarrl.org/inares_plan.pdf
Have you read the PDF file on common training for ARES/RACES that was put out by the Section EC?

As for what my experiences are, put it this way: this year makes my 50th year in amateur radio. I just completed a combat tour in Afghanistan. The reason that I will not state which organization that I am involved with is that could be used to harm such organizations. Therefore I make the disclaimer that I speak for none of these organizations. In this day and age people will seek to harm organizations over comments made on the internet. We have a professor at Purdue (Chapman) who is under fire over comments made about homosexuality made on a private blog on his own time. The world is very mean these days. Just look at the reaction here to my comments.

You know Greg I didn't take Bobs' comments as being aggressive! He like others were trying to assertain facts that you weren't giving . You were pussyfooting around them. I know who you are and we have met. I do think that maybe you take yourself and your self impossed missions a little to seriously. Unfortunately you like a few others want everything militarized and compartmentalized. I am glad for your "50" years of ham radio experience congrats but that doesn't make you anymore of an expert than me. Kind of sounds to me like you're running for office. The fact is Red Cross will need help someday and they aren't going to get as much as they need because they have alienated people. No a criminal check is no big deal but for god sakes you are thinking of Top Secret over the shoulder double probation clearances for people who only want to assist their fellow man in time of diseaster. By the way thanks for your service to our country but it's time to civilianize my friend.Some counties don't have the budgets or the people to be flagships.

From: Greg
Topic: 2163 Message: 2182

Look, my orginal intent was to show that the Red Cross has made allowances by having Spontaneous Volunteers. Thus those hams who want to help can do so without having to get a background check.

By aggressive, I mean the attitude that "I am a ham and that makes better, that I do not have to deal with rules!" Much of the reaction to the changes within Red Cross and such by hams is that way. In other words we have been doing it this way for the last 40 years so why change now.

There is no acknowledgement that the word has changed, that the rules are tougher. Red Cross is merely having to deal with the world as it is now. Too many hams are living in the past. They bitch about no kids being interested in amateur radio but fail to admit that they and their friends often had small families. In fact too many hams bitch too much and do too little. A bunch of gumpy old men does not help us recruit new hams.

And a background check is not a security clearance. That hams are getting all worked up over it makes them look like fools.

This is the point, the world has changed. Anyone volunteering, even to escort school kids on a field trip, will have a background check (if there is time). And ARES, MARS, RACES are requiring higher levels of training.

There may be a shortage of volunteers. If it happens, it happens.

But you can either watch the news or be a part of it. And to be a player will require higher levels of training, more dedication and background checks. Just to be an unpaid volunteer these days means that you basically have to be able to do the same things that the full time (paid) staff does.

What is funny is that if you were in ARES as an EC or DEC you would have the new training program and should have started training your members by now.

If you don't have it, then I suggest strongly that you get with Tony, W9AL and obtain a copy.

John, W3ML
ARRL Indiana Section Manager

I, too, would like to know who this Greg is? Do you have a call sign?

Quoting Greg <n9nwo@...>:

> http://www.inarrl.org/inares_plan.pdf

This document does make a few references to training.

Section 9.2.2. Says that Indiana ARES will conduct periodic training sessions, however I have not been made aware by the SEC, DEC, or my county EC of any training sessions in my area other than Skywarn spotter training.

Section 9.2.3. Encourages Indiana ARES members to participate in ARRL, FEMA, and American Red Cross study courses and workshops.

Section 9.2.4. Says that Indiana ARES will periodically conduct courses in radio technology. I'm not aware of any such courses being offered.

Appendix C gives the job description for an ASEC of Training who duties include assisting units statewide with training, presenting talks and workshops at unit meetings on training topics, and encouraging completion of ARRL emergency communications courses by ARES members.

But, I will direct your attention to Section 7.1.1. which lists the qualifications for Indiana ARES members. There is no mention in this section of any requirement that Indiana ARES members be trained.

> Have you read the PDF file on common training for ARES/RACES that
> was put out by the Section EC?

I may have seen this document, but I'm not sure. Is it posted on the Indiana ARRL web site? Could you provide a link? I am aware of training documents that were co-developed by the Indiana DHS Ham Team and the Indiana Section EC. They were posted in the Indiana DHS Ham Team list and made available for RACES members.

> As for what my experiences are, put it this way: this year makes my
> 50th year in amateur radio.

Congratulations. I see that you have changed your email address to your AMSAT address which includes your callsign (N9NWO). I'm not sure I understand your reluctance to just explicitly reveal your callsign to the members of this list.

> I just completed a combat tour in Afghanistan.

Thank you for your service and I'm glad you made it back home safely.

> Therefore I make the disclaimer that I speak for none of these
> organizations.

Thank you for being clear about this.

I will state once again that I think training is necessary for emergency communications volunteers. I have completed several training courses myself and there are additional courses that I plan to take. And, frankly, I think a some level of documented training should be a requirement for certain emergency communications assignments. However, as I have discussed with our Section Manager, there is a reluctance to make such training mandatory on the part of the national or state ARES organizations.

I AM a ham, and I AM better than everybody else! And if YOU don't feel that way, then just give up your license --- cause you missed the boat!

And, Greg, according to you, I am both arrogant, and a fool. so be it! It's just too bad that you are so full of your own parade, that you have not heard a word that I said. Bob did --- Ricky did!!!

It's too much time and effort to become a "volunteer" now. Things HAVE changed, to that I do agree. Volunteering used to be when you walked in the door, and somebody would put you to work to help out. Now, the color of your ID card is all that matters. Background checks, clearances --- they both did a whole lot of good at Ft Hood a couple of weeks ago. OK, that's hitting below the belt, I'll leave that alone.

My point is --- (Yes, I have an advantage --- most EVERYBODY knows me, or at least who I am.) Here I sit, with 30+ years of playing around with "hobby" communication. I was building my own antenna's for CB radio when CW McCall did his thing for the radio craze. I've got a degree in electronics, and am certified by the Society of Broadcast Engineers to play with the BIG radios. I am self-employed, and do tower and antenna maintenance for a living (It's more work that I "want" to do, but it keeps the bill collectors away.) I've worked for a major company on fire alarm systems, and I've worked setting up networks for a local wireless internet provider. Yet with all of these qualifications, YOU are going to call me a thief, child molester, murderer, father raper (thanks arlo), or worse, until you see some piece of paper that some ten buck an hour yahoo filled out just before lunch on payday.

Yup, I'm the fool --- cause that CNN moment is what "I" will be watching from my Lazy Boy!

Meanwhile, back to my other hobbies --- astronomy, and learning about beekeeping! See --- I AM studying something important!!

Mike N5CEC

PS, congrats on your time as a Ham, and THANK YOU for your military service.

One quick unrelated story. A couple of years ago at Christmas time, I had to pick somebody up at the airport. There was a young military girl there, probably just out of basic training. Before I knew it, I was asking to shake her hand, saying "thank you". She looked at me astonished --- for what? You're in the military aren't you? I asked. You could almost see her buttons popping with her pride! Moments later, her father came over to thank me for what I had done (his buttons REALLY WERE popping with his pride). I simply stated that the treatment of the Vietnam vets should never be repeated. EVERYBODY should be thankful for the people in the military! That moment didn't cost me a thing. But it made me and several others feel

like they could literally float out of the baggage claim area..

Happy Holidays everyone!

Your favorite arrogant fool!

2188. Volunteering in a disaster

Yahoo group: IndyHamRadio
Date: 2009-12-05 01:30:21 UTC
From: Greg
Topic: 2188 Message: 2188

Since we have been discussing volunteering, lets give a little more information about how things are done.

First off, while the ham community is holding steady (but aging), groups like Red Cross have been building volunteer organizations. I remember when most of the functions of a DAT (disaster action team) would have been done by hams, now most chapters have several DAT teams. The DAT folks go out to house fires, give food to the fire fighters as well as water and even wet towels. If they have to help a family, often they upwards to $1000 to a family for emergency housing, food and replacement clothes.

In a major disaster, like the floods of last year, the local chapter is expected to deal with the situation for about 72 hours. At that time National can bring in volunteers from all over the US. Often chapters in areas of the state uneffected by the disaster will assist the chapters within the DRO (disaster recovery operation).

In my area the local chapter has about 100 volunteers and 4 DAT teams. Indianapolis has hundreds of volunteers and a huge number of DAT teams. The Indy chapter is also the coordinator for all state chapters (and region headquarters).

Even at that, you will have folks who want to help out. Thus spontaneous volunteers are welcome. That happened in last years flooding.

As for other agencies, in Marion County they have a rather large Police reserve and Sheriff's reserve. In my county we have CERT teams and the country EMA has its own organization of volunteers. Plus the Sheriff is now forming a reserve.

There is still a need for amateur radio (and MARS) as hams often can communicate when the local trunking network is down (New Orleans). MARS has been able to use HF digital to get message traffic out right in the middle of a hurricane (Charlie was the first time).

What is surprising is that people are stepping up to volunteer over the last 8 years even though requirements are far tougher than in the past. And training is more demanding, almost a full time job!

And there is a national realization that well trained amateur radio operators can help. Some states are funding amateur operations. MARS is being used as a backup for federal agencies (SHARES seems to be going away).

I realize that for many of you the new training requirements and other standards seem a bit much. But much of this is being pushed as a result of 9-11 and Katrina. We may not see many of the old timers volunteering. However nothing says that we can not train and help get licensed (at least Tech) volunteers within groups like the Red Cross.

Mike, the reality is that there are _still_ opportunities for amateur radio operators to volunteer their skills and equipment without having to jump through a lot of hoops.

Yesterday (Saturday), I worked a public service event, coordinated with hams outside my county, practiced my radio skills, and tested interoperability. This event was being conducted in an area where cell phones often don't work and public safety coverage is spotty. Since we had about 600 marathon runners/walkers competing in 20-degree weather on rugged forest trails, the potential for injury or hypothermia was great. Nobody was seriously hurt and the competitors, organizers, and EMS personnel were generally grateful for our efforts.

No ID cards, no MOUs, no buzzword-laden training. Just one amateur radio group reaching out for assistance and hams from four other counties pitching in.

In one of his columns in WorldRadio, the Emcomm writer (W7SAR I think) wrote an interesting column. He pointed out that the original usage of amateur radio in emergencies, its true value, and one that he wants to see much more emphasis on, is LONG-DISTANCE communication. Not the local assistance for various agencies.

If there is a major disaster probably people in New York are going to want to get comunications into the affected area. People in Los Angeles are going to want to get messages in. People from all points in between are going to want to get messages in. People in the affected area are going to want to get messages out to them.

This is one area where EVERY OTHER AGENCY would be at a complete loss. If all normal communication systems are down, no one but radio amateurs will have the capability to send traffic to any place in the country easily and rapidly. We are the only ones with shortwave capability already at our hands. This is where we really showed our value in the aftermath of Hurricane Katrina.

I'll see if I can dig up the date of the issue of WorldRadio where this article appeared.

2194. RE: [IndyHamRadio] Re: Hams volunteering in a Disaster Relief Operation

Yahoo group: IndyHamRadio
Date: 2009-12-06 14:26:53 UTC
From: Ken Bandy
Topic: 2163 Message: 2194

I have been following this thread since it started. There have been some interesting and thought provoking points made. Zack, I agree that amateur radio's long distance operation will be of great use in a disaster, as has been pointed out in such events as Katrina. However, when it comes to long distance comms, don't forget MARS operators, which are hams, but have access to DoD frequencies, and would probably be the first line of back up comms when needed. Also, FEMA still has the SHARES system, which uses HF frequencies, and would be available for long distance comms.

Also, don't forget that in a major disaster, when infrastructure based local comms are compromised or overloaded (remember 9/11?), the VHF/UHF crowd is going to be busy passing local traffic.

73,
Ken

Hi Ken,

Yes, those are good points. However, there are only a limited number of MARS stations around. I don't know how extensive SHARES stations are. Would they alone be able to handle 50,000 messages? I'm guessing there would be at least 100 hams with HF capability available in a large disaster.

If I'm not needed, maybe I should resign from ARES and stick with microwave band experiments. There are only a couple dozen of us in the Midwest who do that.

Interesting!

Care to share a bit about what you are experimenting with?

In a past life, I worked with a tower construction company. One of the things that we did, was install those huge (10' - 12') Andrews dishes (The ones with the lightning bolt on the drum head.) Since then I have installed several backhaul links for wireless internet folks. Usually at 2.4 or 5 GHZ. I've often teased about modulating a microwave oven!

With my astronomy hobby, I have come quite close to installing a radio telescope. Living in the woods of Owen County kind of limits doing things like that without cutting down a bunch of trees.

Anyhow, you've peaked my curiosity!

Mike

SHARES seems to be going away. Many Federal agencies have moved to Army MARS. Remember that the military and government agencies (fed, state and local) do not have to have an amateur radio license to be issued a MARS license. MARS is one place that hams, military, and governmental agencies can all work as one.

MARS has the option of being able to send encrypted message traffic. And the use of HF digital (via PACTOR III on WINLINK) has proven itself in the midst of hurricanes where cellphones, VHF/UHF radio, satphone and internet are all down.

2200. Re: Hams volunteering in a Disaster Relief Operation

Yahoo group: IndyHamRadio
Date: 2009-12-06 16:03:18 UTC
From: Greg
Topic: 2200 Message: 2200

That depends on your county. IN the example of what you give, even ARES will accept hams who want to help with the various runs, walks and marathons out there.

In Marion County (Indianapolis) N9FEB is the EC. Most of such activities are coordinated by the Marion Co. ARES group. But Mike is always looking for volunteers. In my county, likewise most of these support activities have been taken over by ARES and are no longer the function of the local amateur radio club.

But these are not disasters, such as the flooding last year. Even during Katrina message traffic was directed thru selected nets (Salvation Army, MARS, etc).

During the flooding last year Red Cross had a lot of spontaneous volunteers. One of the Marion County Red Cross volunteers (Steve) opened a shelter (I believe in Martinsville but am not sure). The whole town came out to help. Churches had commerical kitchens (required these days) that meet standards for mass care. One pizza shop gave free pizza to the shelter to help during the night. Basically everyone did something even though they were not Red Cross cleared volunteers. In fact Steve was moved at the response of the community, that a whole town would come together to help in this way.

And FEMA depends on Red Cross for disaster assessment. These trained volunteers (btw, hams used to do this before Katrina and 9-11) determine the amount of damage to a property from storms (flooding or torandoes) so that Red Cross Client Services can give on aid. And FEMA uses these assessments to give their aid. Now often a ham might be of worth in these vehicles as many areas it is hard for cellphones to get out. And Red Cross only has so many sat phones.

Again for the first 72 hours, the local chapter deals with a disaster with the help of surrounding chapters. That means setting up shelters and service centers and the early logistics (vehicles, buildings, communications and such). After the first couple days, national Red Cross starts bringing in any number of volunteers from around the nation (in the thousands if needed). The Southern Baptists have huge kitchens in semi trailers that can feed thousands. The logistical arm of the Red Cross can push truck loads of communication equipment (satellite terminals, laptops, networking equipment, radios) as well as clean up kits and office supplies.

You many not like the MOUs and such but how do have everything set up for a disaster? Think that hams could have schools, churches and such willing to be shelters? What about the legal problems? Who pays for damage? And what about fund raising to pay for all of this?

A disaster is a lot more than just a bunch of old farts talking on the radio and drinking coffee. BTW, most of the Red Cross volunteers are between their late 40s and early 80s. But they are out there caring. Think you might have the patience to listen someone tell you their story of how their home was wiped out? Red Cross client service volunteers hear that over and over hundreds of times a day during a disaster.

And does the amateur radio community provide health care workers (nurses and doctors) or mental health workers? Red Cross does. When was the last time you had a course on

Psychological 1st Aid? Or even CPR and regular 1st aid? That is required if you are working on a ERV (truck used to do mass feeding in the field, also hands out clean up kits).

BTW, in many countries Red Cross/Red Crescent/Magan David Adom is the ambulance service and emergency medical teams.

Look Bob, there is a place for what you think is useful. But it is just a part of the bigger picture.

From: Ken Bandy
Topic: 2163 Message: 2201

I'm not inferring that anyone should "resign from ARES", Zack. I think we all need to remember that amateur radio is a valuable asset to Emergency Management and service organizations, but our primary role is that of BACKUP comms. Remember the slogan, "When all else fails...."? That's what we need to remember. As long as commercial microwave, fiber, trunked radio systems, SHARES, or what ever commercial mode is working, then we are in a stand-by mode. It's when those modes go down, AND WE ARE INVITED TO PLAY, we shine. One thing we, as a group, need to avoid doing is "self-deploying". At the least, that can cause confusion in an already hectic situation. At the worst, it can be down-right dangerous, causing the well meaning ham volunteer to become a liability, or casualty.

Lots of good thoughts being presented in this thread.

73,
Ken
KJ9B

Hi Ken,

Yes, those are good points. However, there are only a limited number of MARS stations around. I don't know how extensive SHARES stations are. Would they alone be able to handle 50,000 messages? I'm guessing there would be at least 100 hams with HF capability available in a large disaster.

If I'm not needed, maybe I should resign from ARES and stick with microwave band experiments. There are only a couple dozen of us in the Midwest who do that.

On Sun, Dec 6, 2009 at 8:26 AM, Ken Bandy <kj9b@...> wrote:

I have been following this thread since it started. There have been some interesting and thought provoking points made. Zack, I agree that amateur radio's long distance operation will be of great use in a disaster, as has been pointed out in such events as Katrina. However, when it comes to long distance comms, don't forget MARS operators, which are hams, but have access to DoD frequencies, and would probably be the first line of back up comms when needed. Also, FEMA still has the SHARES system, which uses HF

frequencies, and would be available for long distance comms.

Also, don't forget that in a major disaster, when infrastructure based local comms are compromised or overloaded (remember 9/11?), the VHF/UHF crowd is going to be busy passing local traffic.

Subject: Re: [IndyHamRadio] Re: Hams volunteering in a Disaster Relief Operation

In one of his columns in WorldRadio, the Emcomm writer (W7SAR I think) wrote an interesting column. He pointed out that the original usage of amateur radio in emergencies, its true value, and one that he wants to see much more emphasis on, is LONG-DISTANCE communication. Not the local assistance for various agencies.

If there is a major disaster probably people in New York are going to want to get comunications into the affected area. People in Los Angeles are going to want to get messages in. People from all points in between are going to want to get messages in. People in the affected area are going to want to get messages out to them.

This is one area where EVERY OTHER AGENCY would be at a complete loss. If all normal communication systems are down, no one but radio amateurs will have the capability to send traffic to any place in the country easily and rapidly. We are the only ones with shortwave capability already at our hands. This is where we really showed our value in the aftermath of Hurricane Katrina.

I'll see if I can dig up the date of the issue of WorldRadio where this article appeared.

Mike, the reality is that there are _still_ opportunities for amateur radio operators to volunteer their skills and equipment without having to jump through a lot of hoops.

Yesterday (Saturday), I worked a public service event, coordinated with hams outside my county, practiced my radio skills, and tested interoperability. This event was being conducted in an area where cell phones often don't work and public safety coverage is spotty. Since we had about 600 marathon runners/walkers competing in 20-degree weather on rugged forest trails, the potential for injury or hypothermia was great. Nobody was seriously hurt and the competitors, organizers, and EMS personnel were generally grateful for our efforts.

No ID cards, no MOUs, no buzzword-laden training. Just one amateur radio group reaching out for assistance and hams from four other counties pitching in.

Bob...

Hi Mike,

So far I've built transverters and antennas for all bands from 50 through 10368 MHz and have had great success with them. I do all portable operation, mostly from various hills. I participated in the ARRL 10-GHz-and-Up Contest from the Wisconsin side of Lake Michigan along with a few other people this year. We traveled from around Two Rivers down to Kenosha. There were about 10 stations on the Michigan side we were working from various places.

Currently I use the original KK7B No-Tune 902 and 1296 MHz transverter designs with amp modules for about 10 watts out on those bands. I have loop Yagis for 902 and 1296 from designs that were published in QST. On 2304 I use the WA8NLC no-tune transverter design and an amp with about 8 watts out. On 3456 I use the W1VT design that was in QEX and an amp with about 1 watt out. On 5760 I use a design by W1GHZ that uses pipe cap filters and about 2 watts out. On 10368 I use the W1VT (then KH6CP) design that was in 1993 QST. About 2 watts out.

I am almost done with a 24 GHz transverter (CT1DMK design) and just need to tune it up. I have all the pieces for 47 and 78 GHz transverters except for a dish for 78 GHz. These are among my winter projects. I copied the circuit patterns for the DB6NT harmonic mixers for those bands and made the boards myself..

Most of these transverter designs are in the ARRL Microwave Experimenters and Microwave Projects Manuals. The CT1DMK 24 GHz transverter info is on his website, including circuit board patterns, schematics and writeups (in English!). Also, the ARRL has most of the pc board patterns for these on their FTP site in Postscript and PDF formats. You can get to them via the ARRL website.

Antenna for 2304 through 10368 is a 2-foot dish. The dish and transverter mounts on a large tripod I got on eBay. I can put one transverter at a time on it - it takes about a minute to change transverters unles the temperature is below freezing. My fingers slow down under those conditions! I use the WA3RMX tri-band feed for 2304 through 5760 and a separate feed for 10368. The WA3RMX feed is mot optimum but saves a lot of extra bits to carry and has worked satisfactorily for QSO's up to 500 miles away.

I often go to hills in Indiana to try to work some people in the vicinity of Cincinnati and Kentucky. Mt. Nebo is a pretty good location, also a few hills just west of Indianapolis. One of them is being subdivided now, though, and probably won't have any good spots to operate from on that hill any more.

I don't know how much of that I will be doing until Spring now but if anyone who is on these bands wants a sked and needs a grid I can get to, I'm

willing to go to a hilltop. K4EFD and I played around in Brown County State Park a few years ago. There are a couple good hills there, too. We just got some funny looks from people!

Wow, thanks for the info!

In the spring, when you get to travelling to some of those hilltops, I would love to meet you to watch your operation (and drool and slobber all over the toys!). Please holler!

I'd be willing to meet almost anywhere, but Mt Nebo is fairly close. (I'm three miles north of the 67/231 junction.)

Let me know.

OK will do. I worked a guy in St. Louis from Mt. Nebo on 5760 a couple years ago and made a bunch of 1296 QSO's from there.

2205. CW Course - Canceled tonight

Yahoo group: IndyHamRadio
Date: 2009-12-06 21:31:49 UTC
From: KB9BVN
Topic: 2205 Message: 2205

The CW course on 146.835 is going to be canceled tonight only - due to me having the flu, or something like the flu.

I will do it next Sunday night (Dec 13) at 6:30PM.

If you have already downloaded the CW Course from K7QO, start listening to the MP3 files. Next Sunday it is my intention to start wth files 21 and 24.

File 21 covers the letters A - N, and File 24 covers the letters A-P. These are both 11 minute tests.

If you can just spend 15-20 mins a day listening to files 1 - 24, you will have no problem at all.

If you are having trouble downloading the software, then do this:

Send me a postage paid return CD mailer, with a blank CD ROM in it.

I will burn a copy of the Code Course, and mail it back to you.

OR

Send me $3.00 in cash, with your return address, and I will burn a copy and mail it to you.

My address is on QRZ.COM.

Brian, I've love to play with modulated CW on one of the
under-used 2m repeaters in Marion County.

Aside from scheduled nets, events, and storm nets,
not much is happening on the local 2m repeaters,
with the exception of 146.70, and that's usually
just during drive time.

My MFJ key with oscilator is broke, but I can
still use the side-tone generator on my HF rig with
the transmitter turned off.

I might get a kick out of imagining the startled look
on the face of repeater-listeners as they hear a
modulated-CW QSO.

One time a self-important guy (not a repeater owner or club member)
took umbrance at my da-di-da-di da-da-di-da da-di-di di
da-di-da da-di-da-di da-da-da-da-di da-di-di-di di-da-di da-da-di-di.

-kc9brz.

Funny!

It used to be that whenever you saw a ham radio plate, there would be a quick "CQ" on the car horn and a friendly wave. Nowadays, if you were to do that, all you get is the finger!

Sigh.

2213. Re: New Yeasu Radio pricing FTM-350R

Yahoo group: IndyHamRadio
Date: 2009-12-19 22:14:54 UTC
From: Mark Thompson
Topic: 2213 Message: 2213

The attached email about pricing of the new Yaesu FTM-350 APRS mobile is interesting.

The FTM-350 is certainly not an inexpensive radio probably because of the amount of technology in it
nor is the VX-8 HT inexpensive for that matter.

By the way, the new Icom ID-880H FM/D-STAR 2m/70cm mobile has been reviewed in December 2009 QST.
I believe the ID-880H street price has been around $499. The street price of the IC-91AD FM/D-STAR 2m/70cm HT has recently been about $369.

For those who have been concerned about the prices of D-STAR radios the FTM-350 price demonstrates
that when you incorporate a lot of technology into a radio it increases the price.

Interestingly, many hams seem to expect that D-STAR radio prices will decrease when there is competition from
another manufacturer in the D-STAR market. However, Kenwood has been making HTs & mobiles incorporating APRS for many years
and that does not seem to have depressed the price of the FTM-350 or the VX-8.

Good Morning , Zack , If the Original Poster is not a Ham , He posted no call He may not know the Band plans , Also unless He has some type of Disability Some will think He is shouting typing in all caps , I don't care Just trying to give out some Helpful info if this is legit

Happy Holidays

Don KA9QJG

I would hope licensed hams would know the frequency given is in the EME subband. Not a place for an FM signal.

If you're ever on the 146.70 repeater and hear k9rag,
throw in a little CB-lingo once in a while. He loves that.

2228. MARS Gets New Name

Yahoo group: IndyHamRadio
Date: 2009-12-27 02:20:20 UTC
From: ka9qjg
Topic: 2227 Message: 2228

FYI

Happy Holidays

Don KA9QJG

On Wednesday, December 23, the U.S. Department of Defense (DoD) issued an Instruction <http://www.dtic.mil/whs/directives/corres/pdf/465002p.pdf> concerning MARS, effective immediately. This Instruction gives the three MARS services -- Army, Air Force and Navy/Marine Corps -- a new focus on homeland security and a new name: Military Auxiliary Radio System. The Instruction is the first major revision to <http://www.arrl.org/news/files/dod46502_1988.doc> MARS since January 26, 1988 -- as such, the first revision since the 9/11 attacks and Hurricane Katrina, two major events that changed the way Amateur Radio dealt with emergency communications.

The DoD defines a "military auxiliary" as "an organized body of volunteers prepared to supplement the uniformed services or any designated civilian authorities by provision of specialized autonomous services when called upon or when situations warrant," and gives the Civil Air Patrol and Coast Guard Auxiliary as examples of auxiliaries.

In the past, MARS had focused primarily on emergency communications and health and welfare support. The DoD's Instruction now directs the three MARS services to provide "contingency radio communications" to support US government operations, DoD components and "civil authorities at all levels," providing for national security and emergency preparedness events. MARS units will still continue to provide health and welfare communications support "to military members, civilian employees and contractors of DoD

Components, and civil agency employees and contractors, when in remote or isolated areas, in contingencies or whenever appropriate." MARS must also be capable of operation in "radio only" modes -- without landlines or the Internet -- and sustainable on emergency power (when public utility power has failed); some MARS stations must be transportable for timely deployment. The Instruction, however, does not mention which of the three MARS services will take the lead when responding to events. According to sources, this has been seen as a critical issue in conforming to the National Incident Management System (NIMS) that calls for "unity of command." As now constituted, the three separate MARS services are supposed do "interoperate," but command-wise, each operates independently. Some MARS members had urged clarification on this issue to avoid confusion during an emergency, sources said.

The Secretaries of the Army, Air Force and Navy are to encourage participation in MARS, the Instruction states, saying this may be accomplished "by establishing and funding an active MARS program within each Military Department, which shall then assign a MARS-licensed staff representative to manage operations, readiness, planning, procedural and technical development, documentation, standards, training, equipment, program and membership administration, and other matters necessary for mission accomplishment."

The Secretaries are also tasked with bringing new personnel into their MARS services. The Instruction calls on them to establish programs "to promote civilian interest, recruit qualified volunteers, sponsor them for basic background checks and furnish them suitable training in contingency support communications."

The Instruction also dictates that MARS leaders will now report to three DoD officials; before this revision, they only reported to one person. The Assistant Secretary of Defense for Homeland Security and Americas Security

Affairs (ASD [HD&ASA]) now has primary responsibility for the MARS Defense Support of Civil Authorities (DSCA) mission. In addition, MARS leaders will report to the Assistant Secretary of Defense for Networks and Information Integration/DoD Chief Information Officer (ASD[NII]/DoD CIO) and the Assistant Secretary of Defense for Logistics and Material Readiness (ASD[L&MR]). In the 1998 charter, oversight of MARS was assigned to a single top official, the Assistant Secretary of Defense for Command, Control, Communications and Intelligence.

This revision -- which was years in the making -- keeps the Navy/Marine Corps MARS intact; until now, members of this MARS service were concerned that their part of MARS might be terminated by Navy commanders.

The Instruction also gives some new perks to MARS members. Active duty military personnel who are affiliated with MARS may be able to earn Reserve points based on service in MARS and, in cases of permanent change of station, qualify for weight exemption for transportation of MARS communications equipment. All members may be considered for benefits associated with DoD civilian service, such as access to DoD morale, welfare and recreation Category C recreational facilities and access to DoD credit unions.

Membership in any of the three MARS services is open to qualified active duty, Guard and Reserve personnel, as well as those in civilian agencies who report to civil authorities or their supporting organizations (including nongovernmental organizations) and private US citizens who meet age, education and other criteria -- such as an FCC-issued Amateur Radio license -- imposed by a DoD Component MARS office.

2229. Digital activity in Lafayette

Yahoo group: IndyHamRadio
Date: 2009-12-30 15:17:34 UTC
From: Greg
Topic: 2229 Message: 2229

Lafayette, primarily through the efforts of the local ARES group (http://www.w9tca.com/), has become very active in the digital moders. Lafayette currently has both 2m and 440 D-Star repeaters. There is a very active PACKET node (digipeater) on 145.050 Mhz. And now there is an APRS digipeater (K9IN) at 100 ft over the Cumberland School (West Lafayette).

From http://www.w9tca.com/w9tca/packet
The packet node and PBBS consists of a Kantronics KPC-3+ TNC with version 9.1 firmware and 512K RAM, connected to an Icom IC-V8000 2-meter transceiver. Power is supplied by an Astron SL-11A.

A DCI-146-4H 4-pole bandpass filter keeps unwanted RF out of the receiver front end to improve sensitivity, and a PolyPhaser IS-50UX-C0 impulse supressor helps protect the equipment from lightning damage. A run of Andrew LDF5-50A 7/8" Heliax feeds into a gain antenna at the 200' level on the tower, producing an EIRP of about 33 watts.

The TCARES Packet Node and BBS is classified as a "stand-alone" system, since it does not utilize a computer running specialized software. Although it is not considered a "full-service" BBS, it does provide most of the same capabilities through its advanced firmware, including: standard BBS message storage and retrieval, automatic message forwarding, digipeating, local area node, network node operation (both KA-Node and K-Net), and remote access.

Joy be the day when Hoosier signals from the south
reach my full time packet mailbox of ka9qwc-1 on
145.530 or I could even change frequencies to run
a test for out of Whitley County areas to accomplish
that part.

For some reason my HF packet/pactor set up that
was working FB a couple years or so back seems to
have a snag that has not been resolved yet.

If I could reach another station further south it would
entice me to energize a second vhf packet station on
that frequency.

Keep up the faith & good work fellow amateurs.

_____
Nifty E-Z Guide to PSK31 Operation
-- by Bernie Lafreniere, N6FN

Learn how to setup your
station for PSK operation. Using the very popular DigiPan software as a
basis, a simple approach is utilized for configuring your interface
hardware, software and computer system. Separate chapters are devoted
to the installation and setup of three different PC-to-radio
interfaces. You'll also explore the pros and cons of building a
home-brew interface or purchasing several types of commercial
interfaces.

This book is designed to
help you get PSK31 up and running quickly and easily. Light on theory,
it concentrates on the practical issues of getting things connected and
making PSK31 QSOs. With this step-by-step guide you'll experience the
fun of PSK!

2234. CW class on the air

Yahoo group: IndyHamRadio
Date: 2010-01-03 18:07:53 UTC
From: KB9BVN
Topic: 2234 Message: 2234

First I would like to apologize to everyone that was tuning in to the on air CW sessions on the 146.835 machine. My son (Marines) just returned from Iraq after 11 months in Al Anbar, so he and his family (wife, 2yr old son, and 3 month old son) have been here since the 15th of December. So I have not been on the air much at all and I have not had time to resume the on the air playback of the K7QO course.

I will not be on the air tonight, and every Sunday in January is looking bad. I hope to resume this on Sunday February 21st. (The 7th is Super Bowl, the 14th is Valentine's Day).

You can follow this very easy to use course on your own, and be running about 10 WPM in less than a month. Then just get on the air and have some QSO's...with every QSO you make in CW, you will improve your speed and accuracy. We all start somewhere, so don't be nervous.

Happy New Year, and God bless!

Brian,

Certainly understand your situation and we want to
welcome all the troops home safely too. My grandson
recently came home from his army tour in Iraq and
glad to see him back.

He stopped by here & we took him out to eat before
he departed to Florida to be with his parents. Then
in early December we took off to Florida and had our
early Xmax with them all near Salt Springs.

cul 73 best to you and yours.

If anyone would like to have some CW practice we
could probably arrange it if contacting me. I do not
send very fast and in fact use a keyboard mostly now
days as the paddle keys are difficult to use plus my
hearing has to get the right pitch/tone.

My CW FISTS NR IS 5668 too if you are into that group.

Topic: 2237 Message: 2237

www.arrl.org/news/features/2010/01/01/11272/?nc=1

Surfin': Visit the Online Ham Radio Stacks

This week, Surfin' checks out the stacks at Linux Journal and Tucson Amateur Packet Radio.

TAPR’s DCC Proceeding Web page www.tapr.org/pub_dcc.html houses the searchable and downloadable proceedings from recent ARRL/TAPR Digital Communication Conferences (DCC)

Linux Leaning Hams
Those of you who lean towards Linux should check out the January 2010 issue of Linux Journal www.linuxjournal.com/issue/189.
It features ham radio with three feature articles on the subject: "An Amateur Radio Survival Guide for Linux Users," "Xastir -- Open-Source Client for the Automatic Packet Reporting System" and "Rolling Your Own with Digital Amateur Radio."

TAPR's Online Libraries
One of the many hats I wear is the editor's chapeau at TAPR (Tucson Amateur Packet Radio), where I copy, cut and paste together TAPR's quarterly newsletter, Packet Status Register (PSR).

Recently, I was researching something or other concerning TAPR and I thought, "Wouldn't it be a better world if all the back issues of PSR were online?" I made some inquiries and discovered that Phil Karn, KA9Q, already had a bunch of the early issues online. Phil graciously granted permission for us to copy what he had and then we -- John Ackermann, N8UR; John Koster, W9DDD; Darryl Smith, VK2TDS, and I -- began back-filling the missing issues. In short order, we assembled a complete library of back issues that you can access at TAPR's PSR Web page www.tapr.org/psr.

Meanwhile, Ken Konechy, W6HHC, assisted by W9DDD, uploaded the five most recent years of abstracts from the ARRL/TAPR Digital Communication Conferences (DCC) papers on the TAPR Web site. Years 2005 through 2009 are now searchable on the Internet and you can download PDFs, too.
Visit TAPR's DCC Proceeding Web pagewww.tapr.org/pub_dcc.html to check out these valuable technical documents.

Happy New Year and until next time, keep on surfin'!

Editor's note: Stan Horzepa, WA1LOU, is working on the 58th installment of his New Year's resolutions. To contact Stan, send him e-mailwa1lou@... or add comments to his bloghttp://horzepa.blogspot.com/ .

2238. Open invitation to Indianapolis Radio Club meeting this Friday

Yahoo group: IndyHamRadio
Date: 2010-01-04 12:53:35 UTC
From: Ken Bandy
Topic: 2238 Message: 2238

This promises to be a very interesting and educational presentation on radio wave propagation.

The meeting will be held at the Indianapolis Training Center, at 2802 N. Meridian Street, Indianapolis. The meeting will commence around 7:00 p.m., with refreshments provided by the club and the Training Center.

The program this month is about Radio Propagation, presented by Carl Luetzelschwab, K9LA. Carl over the years has become a real expert in Electromagnetic Propagation. He writes monthly articles for World Radio and National Contest Journal.

This is a program not to miss. You will want to understand the upside of our current sunspot cycle.

Also, Friday night is the annual IRC Chili Cook off. Remember to bring your favor Chili recipe and your taste buds. (Antacids optional)

For additional information, point your browser to http://www.indyradioclub.org. Hope to see you there!

NOTE: You do not have to be a member of the Indianapolis Radio Club to attend this meeting, all are welcome!

73,
Ken

2239. Practice CW QSO's on the local 2m repeaters.

Yahoo group: IndyHamRadio
Date: 2010-01-04 16:04:54 UTC
From: kc9brz
Topic: 2239 Message: 2239

Brian, I'd be willing to pick up the ball and run with it in
January, at least to try it once, provided it would be on
Tuesday evenings at 7:35pm.

I can play/transmit the MP3 files you had in mind, or else
we could just have a live CW net, with people using their oscilators
or the audio side tone output from their HF rig (just holding
the 2m mike next to the oscilator or HF speaker).

I can reach every 2m repeater in Marion county, and the
northern half of Johnson county from my Tuesday operating location
with a 45' high 7dbi gain vertical antenna.

Are you one of the trustees for the 146.835 repeater? Just send
me (or have one of the trustees send me) explicit permission in
email to use the repeater in that manner, since it will be keyed up
more than normal. And so I can tell any "concerned" ham that it
is indeed with permission. (I send modulated CW once, even with
permission, and got told off by someone, so not everyone knows it's
legal or permitted by repeater trustees).

And let me know how often to let up (take a break) due to
repeater time out, and also to check to see if there is anyone
with urgent/emergency/priority traffic.

I have those files on my hard drive, so let me know which filenames
to start off with the first night.

If anyone wants to do it on more northern repeaters, one of the
trustees of 146.97 said it was okay with them to have modulated
CW QSO's, but I would want to check with them again before
attempting to play a file of several minutes duration.

-Dave A., kc9brz.

me (or have one of the trustees send me) explicit permission in
email to use the repeater in that manner, since it will be keyed up
more than normal. And so I can tell any "concerned" ham that it
is indeed with permission. (I send modulated CW once, even with
permission, and got told off by someone, so not everyone knows it's
legal or permitted by repeater trustees).

And let me know how often to let up (take a break) due to
repeater time out, and also to check to see if there is anyone
with urgent/emergency/priority traffic.

I have those files on my hard drive, so let me know which filenames
to start off with the first night.

If anyone wants to do it on more northern repeaters, one of the
trustees of 146.97 said it was okay with them to have modulated
CW QSO's, but I would want to check with them again before
attempting to play a file of several minutes duration.

-Dave A., kc9brz.

>First I would like to apologize to everyone that was tuning in to the
>on air CW sessions on the 146.835 machine.
>

>You can follow this very easy to use course on your own, and be
>running about 10 WPM in less than a month. Then just get on the air
>and have some QSO's...with every QSO you make in CW, you will
>improve your speed and accuracy. We all start somewhere, so
>don't be nervous.

2241. ham radio licensing test session

2243. 25 Astron RS20A Used Power Supplies still left to be sold.

Yahoo group: IndyHamRadio
Date: 2010-01-08 19:19:48 UTC
From: Dan Dahms
Topic: 2243 Message: 2243

The Whitley County ARC still have around 25 Astron RS-20A used but working power supplies available. We have sold a large number already, so if you are interested this is the last we have left. They are rated 16 amp continous or 20 amp intermittent duty power supplies. Most have minor scratches and most of them have lost there rubber feet, other than that they are fine.

The cost is $50 per power supply. $10 of this goes to the Whitley Co. ARC. Preferred payment is cash and delivery is in person. Anyone interested in northeast Indiana contact Dan N9WNH at wc9ar@...

Also one of our club members will be in southern Indiana returning to northern Indiana the week of of January 11-15 and will have a number of power supplies with him during his business trip. So anyone in southern Indiana and during Monday-Thursday or in the Indy and I-69 areas on Friday, please contact Josh K9KOP josh@copsgear.com for details and arrangements.

2250. Morse code practice, Tue Jan 12th, 7:35 pm, on 146.835 rptr

Yahoo group: IndyHamRadio
Date: 2010-01-11 00:00:34 UTC
From: kc9brz
Topic: 2250 Message: 2250

Learn MORSE CODE the EASY way.

I'll be transmitting some morse code practice audio (via modulated CW)
on the 146.835 (PL 151.4) repeater belonging to the Mid-State Amateur
Radio Club, of Franklin, Indiana, (with permission of the club president)
starting at about 7:35 pm, TUES Jan 12th, 2010.

And hopefully continuing on a weekly basis on the same night and time.

No special equipment is needed to listen. Just tune in to 146.835 Mhz
(FM) and listen by ear. Therefore, scanner listeners can also hear
it. (146.835 is the _output_ frequency of the repeater.)

-===== The fine print =====-

These will be mp3 files from the K7QO code course, which can
be downloaded in zip format here: http://k7qo.radiotelegraphy.net/
(303 megabytes). These are the exact files I'll be playing.

You can download just the course manual here:
http://www.kkn.net/~k7qo/   to understand what the course is about.
And download just the answer manual there too.

This course uses the KOCH method, which I personally think is the
best way. (Unfortnately, I didn't know that when I started, and
now I have to get the pictures of dashes and dots out of my head.)

In K7QO's series:
- 1st file teaches the letter "a".
- 2nd file teaches the letter "b".
- 3rd file tests the letters "a" and "b".
- 4th file teaches the letter "c".
- 5th file teaches the letter "d".
- 6th file tests the letters "a" through "d".
- And the pattern repeats.

-====================

Those who want to use a Windows program to generate CW audio
practice listening, and test their CW copying skills at
various speeds, may download G4FON's KOCH CW trainer at:
http://www.g4fon.net/
I've used that program and really like it.

-====================

Special thanks to Brian Murrey, KB9BVN, who came up with
this idea of using the repeater. And the Mid-State ARC

club and their officers and repeater gurus for hosting it.

-=====================

I'll try to remember to pause after every file to ID
and ask if there's any emergency or urgent traffic.

-=====================

Other data: the 146.835 repeater is located near the intersection
of State Road 135 and Olive Branch Road, Greenwood, IN 46143.
Latitude: 39.5917 Longitude: -86.1988
Grid: EM69vo

got an idea *ding*

if there echolink/irlp on the repeater, outsider stations could "join in"... if not, just pipe the repeater output's audio into somebody's echolink on their shack computer so it'd be receive-only worldwide & nobody could interrupt the class :) if so, please advise node # so we can tune in :)

2253. Re: [IndyHamRadio] MARS Gets New Name

Yahoo group: IndyHamRadio
Date: 2010-01-13 22:13:58 UTC
From: Don Evilsizor
Topic: 2227 Message: 2253

Don,

Been meaning to respond to your post some time
ago but guess time marches on too fast at my age.

After reading your interesting bio on QRZ still was
not certain if you are a MARS member or not?

I happened to join the Air Force MARS program by
default. That is to say I signed up at many hamfests
back in the early 80's and never heard anything
back from anyone for a long time - like about 3 years!
Always gave my address, phone numbers and other
means of contact.

Finally the SMD for AFMARS got in contact with me
so I been staying active in the program. Now had to
change my badges due to reorganization into DHS
districts resulting in my MARS call also changing.

I used to get a bit of teasing due to fact of retiring
from the army - like questions if I retired from the
army how did I wind up with AFMARS. Well the
preceding paragraph explains why.

But MARS did a lot of good for me while overseas
by making numerous phone patches back to home.

I am active on the Indiana Traffic Net too along with
other modes including vhf packet & digital.

Do you have any relatives as hams? Seems like I used
to work someone on CW a while back.

Don /KA9QWC

From: ka9qjg <KA9QJG@...>
Subject: [IndyHamRadio] MARS Gets New Name
To: IndyHamRadio@yahoogroups.com
Date: Saturday, December 26, 2009, 9:20 PM

FYI

Happy Holidays

Don KA9QJG

On Wednesday, December 23, the
U.S. Department of Defense (DoD) issued an

Instruction

<http://www.dtic. mil/whs/directiv es/corres/ pdf/465002p. pdf>

concerning MARS, effective immediately.
This Instruction gives the three

MARS services -- Army, Air Force
and Navy/Marine Corps -- a new focus on

homeland security and a new
name: Military Auxiliary Radio System. The

Instruction is the first major
revision to

<http://www.arrl. org/news/ files/dod46502_ 1988.doc>
MARS since January 26,

1988 -- as such, the first
revision since the 9/11 attacks and Hurricane

Katrina, two major events that
changed the way Amateur Radio dealt with

emergency communications.

The DoD defines a "military
auxiliary" as "an organized body of volunteers

prepared to supplement the
uniformed services or any designated civilian

authorities by provision of
specialized autonomous services when called upon

or when situations
warrant," and gives the Civil Air Patrol and Coast Guard

Auxiliary as examples of
auxiliaries.

In the past, MARS had focused
primarily on emergency communications and

health and welfare support. The
DoD's Instruction now directs the three MARS

services to provide
"contingency radio communications" to support US

government operations, DoD
components and "civil authorities at all levels,"

providing for national security
and emergency preparedness events. MARS

units will still continue to
provide health and welfare communications

support "to military
members, civilian employees and contractors of DoD

Components, and civil agency
employees and contractors, when in remote or

isolated areas, in contingencies
or whenever appropriate." MARS must also be

capable of operation in
"radio only" modes -- without landlines or the

Internet -- and sustainable on
emergency power (when public utility power

has failed); some MARS stations
must be transportable for timely deployment.

The Instruction, however, does
not mention which of the three MARS services

will take the lead when
responding to events. According to sources, this has

been seen as a critical issue in
conforming to the National Incident

Management System (NIMS) that
calls for "unity of command." As now

constituted, the three separate
MARS services are supposed do

"interoperate," but
command-wise, each operates independently. Some MARS

members had urged clarification
on this issue to avoid confusion during an

emergency, sources said.

The Secretaries of the Army, Air
Force and Navy are to encourage

participation in MARS, the
Instruction states, saying this may be

accomplished "by
establishing and funding an active MARS program within each

Military Department, which shall
then assign a MARS-licensed staff

representative to manage
operations, readiness, planning, procedural and

technical development,
documentation, standards, training, equipment,

program and membership
administration, and other matters necessary for

mission accomplishment."

The Secretaries are also tasked
with bringing new personnel into their MARS

services. The Instruction calls
on them to establish programs "to promote

civilian interest, recruit
qualified volunteers, sponsor them for basic

background checks and furnish
them suitable training in contingency support

communications."

The Instruction also dictates
that MARS leaders will now report to three DoD

officials; before this revision,
they only reported to one person. The

Assistant Secretary of Defense
for Homeland Security and Americas Security

Affairs (ASD [HD&ASA]) now
has primary responsibility for the MARS Defense

Support of Civil Authorities
(DSCA) mission. In addition, MARS leaders will

report to the Assistant
Secretary of Defense for Networks and Information

Integration/ DoD Chief
Information Officer (ASD[NII]/DoD CIO) and the

Assistant Secretary of Defense
for Logistics and Material Readiness

(ASD[L&MR]). In the 1998
charter, oversight of MARS was assigned to a single

top official, the Assistant
Secretary of Defense for Command, Control,

Communications and Intelligence.

This revision -- which was years
in the making -- keeps the Navy/Marine

Corps MARS intact; until now,
members of this MARS service were concerned

that their part of MARS might be
terminated by Navy commanders.

The Instruction also gives some
new perks to MARS members. Active duty

military personnel who are
affiliated with MARS may be able to earn Reserve

points based on service in MARS
and, in cases of permanent change of

station, qualify for weight
exemption for transportation of MARS

communications equipment. All
members may be considered for benefits

associated with DoD civilian
service, such as access to DoD morale, welfare

and recreation Category C
recreational facilities and access to DoD credit

unions.

Membership in any of the three
MARS services is open to qualified active

duty, Guard and Reserve
personnel, as well as those in civilian agencies who

report to civil authorities or
their supporting organizations (including

nongovernmental organizations)
and private US citizens who meet age,

education and other criteria --
such as an FCC-issued Amateur Radio license

-- imposed by a DoD Component
MARS office.

2254. Bloomington High School South raising money for Haiti disaster relief

Yahoo group: IndyHamRadio
Date: 2010-01-15 05:10:48 UTC
From: neilrapp
Topic: 2254 Message: 2254

The Bloomington High School South Amateur Radio Club K9SOU is collecting monetary donations to send to the Hands and Feet Project, a children's village in Jacmel, Haiti that is directed and operated
by an area amateur radio operator. Ham radio club members will be collecting donations in the front lobby of the Bloomington South gym at tonight's boys basketball game against Edgewood. All donations will go directly to Jacmel, Haiti to assist those children who were devastated by the recent earthquake. Donations will also be collected at the game next Friday night versus Martinsville, and by mail.

Amateur Radio Club members will also be collecting donations at school and by mail through January 31st. Checks can be made payable to Bloomington High School South, and marked for the Ham Radio Haiti Relief Fund.

The Hands and Feet Project is a 501c3 organization dedicated to caring for orphans and abandoned children around the world. They established the village for children in Jacmel, Haiti in 2004.

Drex Stuart, known to ham radio operators by call letters N9CIA and HH5SD, along with his wife Jo are part of the staff in Haiti. Drex previously served as a minister in the Evansville, Indiana and Owensboro, Kentucky areas, as well as a chaplain for the Indiana State Police. His son, Mark, was the lead singer in the Christian band Audio Adrenaline. The band is responsible for establishing the Hands and Feet Project. Mark was also a licensed ham radio operator at one time, and was also in Haiti when the earthquake occurred.

Donations can be mailed to Bloomington High School South, Ham Radio Haiti Relief Fund, 1965 S. Walnut Street, Bloomington, IN 47401.

For more information about the Hands and Feet Project, visit www.HandsAndFeetProject.org.

For more information about the Bloomington South Amateur Radio Club, go to www.south.mccsc.edu, select Activities, and then Ham Radio Club.

2255. ARRL VHF Sweepstakes, Saturday, 1/23 1900 UTC - Monday, 1/25 0359 UTC

Yahoo group: IndyHamRadio
Date: 2010-01-16 00:00:48 UTC
From: Mark Thompson
Topic: 2255 Message: 2255

www.arrl.org/news/stories/2010/01/13/11282/?nc=1
Warm Up with the ARRL January VHF Sweepstakes!
VHF weak-signal operators will be on the bands in force the weekend of January 23-25 as the ARRL January VHF Sweepstakeshttp://www.arrl.org/contests/rules/2010/jan-vhf-ss.html hits the airwaves. This contest gives the VHFer in all of us a chance to do some contesting during the winter months.

ARRL Contest Branch Manager Sean Kutzko, KX9X said that January may not seem like the ideal time to hold a VHF+ contest: "After all, sporadic-E propagation is most commonly associated with summer months; however, the propagation gods like to surprise and confound, and there have been plenty of QSOs made via sporadic-E in the colder months through the years. Plenty of other chances for enhancement exist as well, thanks to tropospheric ducting and auroral propagation. Thanks to the advent of WSJTsoftware, making QSOs via meteor scatter in the wee hours of the morning on 6 and 2 meters has never been easier. You have plenty of opportunities to make long-haul QSOs on the VHF+ bands in January!"

Kutzko said that getting on the VHF bands is easy. Technician class licensees have permission to use all amateur bands above 50 MHZ, and the antennas for VHF frequencies are comparatively smaller than their HF counterparts. A dipole for 6 meters is less than 10 feet long and most modern transceivers come with 50 MHz built-in. So, string up a dipole for 6 meters and see what you can work!

"While most contest QSOs will be made using SSB and CW," Kutzko said, "don't forget about FM simplex. There are numerous stations that enjoy 2 meter FM simplex QSOs, especially if you live near a large population center. Just be sure to keep the national 2 meter calling frequency of 146.52 MHz clear of contest activity. Don't neglect the higher bands, either -- 222 MHz, 432 MHz and 1.2 GHz and up will see activity this weekend, too."

The 2010 ARRL January VHF Sweepstakes runs from 1900 UTC Saturday, January 23 through 0359 UTC Monday, January 25. Participants can submit their Cabrillo-formatted logs via e-mail. Paper logs may be sent to ARRL January VHF Sweepstakes, 225 Main St, Newington, CT 06111. All logs must be postmarked no later than 0359 UTC Thursday, February 25, 2010.

2010 ARRL January VHF Sweepstakes
General Rules
1. Object: To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 23-25, 2010)..
3. Entry Categories:
1. 3.1. Single Operator.
1. 3.1.1. Low Power
2. 3.1.2. High Power

2. 3.2. Single Operator Portable
3. 3.3. Rover.
1. 3.3.1. Rover
2. 3.3.2. Limited Rover
3. 3.3.3. Unlimited Rover
4. 3.4. Multioperator.
5. 3.5. Limited Multioperator.
See “General Rules for All ARRL Contests Above 50 MHz” for detailed category definitions.
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
1. 4.1. Exchange of signal report is optional.
5. Scoring:
1. 5.1. QSO points:
1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.
2. 5.1.2. Count two points for each 222- or 432-MHz QSO.
3. 5.1.3. Count four points for each 902- or 1296-MHz QSO.
4. 5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.
2. 5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees x 1 degree grid square counts as one multiplier on each band it is worked.
3. 5..3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
4. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
1. 6.1. Electronic submissions may be emailed to JanuaryVHF@arrl.org and hand-written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT 06111.
2. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.
3. 6.3. Entries must be emailed or postmarked no later than 0359 UTC Thursday, February 25, 2010.
4. 6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms
5. 6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and scoreif they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.
7. Miscellaneous:
1. 7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
2. 7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
3. 7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
8. Awards: Certificates will be awarded in the following categories:
1. 8.1. Single operator.
1. 8.1.1. Top Single Operator in each ARRL/RAC Section for high and low power.

2. 8.1.2. Top Single Operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
2. 8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)
3. 8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
4. 8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
5. 8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited Multioperator entries are not eligible for single-band awards.)
6. 8.6. Top DX stations where significant effort or competition is evident.
9. Other:
1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” in November 2001 QST or on the ARRL Web at www.arrl..org/contests
2. 9.2. For more information contact contests@... or (860) 594-0232.

2257. APRS help needed

Yahoo group: IndyHamRadio
Date: 2010-01-23 15:59:22 UTC
From: Tom
Topic: 2257 Message: 2257

Hello,

Tom WD9GON in Mooresville, In. here. Just got the bug to try aprs and have started to get things together, I'm using UI-view32 and a VX-150. I would like to find an elmer to talk about a few questions I have with my software set up. I have a few questions about the unproto address and Igates.

Thanks, Tom WD9GON

How can I help?

You will see me on APRS as W9RXR-7 (Kenwood TM-D710 mobile), W9RXR-9 (Argent Data T2-135 mobile), or W9RXR-12 (UI-View).

Questions for the moment. As a base station, I am using the unproto address of "APRS,KB9JQM-10,WIDE2". Would this be correct for me? Can you see me as WD9GON located in Mooresville? Can't really figure out why everyone else seems to come up on "findu.com" except me when I use this in UI-view32.

If you would like to talk over the phone I will sent you my number in a direct e-mail to you.

Thanks, Tom wd9gon

Bob

Try setting your unptoto to "wide1-1,wide2-1 " without the parenthesis and see if that helps.

Rick

No. There's no need to program a specific digi. As Rick indicated,
use "APRS,WIDE1-1,WIDE2-1". The "APRS" part is unique to UI-View and
has to be there. "WIDE1-1" will get you digipeated by any nearby
fill-in digis, if there are any. "WIDE2-1" will get you digied once
by any wide area digis that can hear you. That still might not get
you heard by an Igate, so you may need to change the last entry to "WIDE2-2".

> Can you see me as WD9GON located in Mooresville?

No, none of your packets have made it into the APRS-IS servers.

> Can't really figure out why everyone else seems to come up on
> "findu.com" except me when I use this in UI-view32.

Another on-line APRS viewer you can try is www.aprs.fi. It will
overlay positions on a Google map.

When you are monitoring the local APRS traffic, do you see KB9QJM-10
or N9AMN-2 show up on your map? They are probably the two closest
digis to Mooresville.

OK, Changed the unproto address to "aprs,wide1-1,wide2-2" I let my set up run for a few hours last night and this morning and still nothing on the aprs IS servers. I tried findu and www.aprs.fi, still nothing. I am using an older PacComm tiny-2 tnc. I'm wondering if something could be wrong with it's set up. I'm wondering if this is a problem getting to an Igate or a more basic problem. Can anyone else see my icon locally. How can I check if I'm being digi'ed? I see both kb9qjm-10 and n9amn-2. I have monitored 144.39 with another HT when I'm transmitting and can hear the sound of aprs that it makes. I know I'm sending something but that's about it.

At last! It works. Believe it or not it was an antenna issue. I should have used my own advise; When all else fails and nothing makes sense, start looking else where. I'm getting into the Igate now and coming up on findu and google.

Thanks for all the suggestions guys. I guess half the fun is getting there.

I have been there. The Memorial is free, lots of things to see besides the radio room. The radio room is set up like the two radio rooms on the USS Indianapolis. The callsign is WW2IND. Here is the web page http://www.indyradioclub.org/ussindy.htm

Here are some pictures http://www.ussindyradio.org/ussindyradiormexhibit.htm

Just do a web search on "Indianapolis war memorial radio" as there are even more links out there.

This meeting is the annual dinner. It will be held at the Logan's Roadhouse on St Rd 26 E at 6PM. There are a number of specials, if you are so minded. The big one is 2 entrees for $13.99.

Again, this Wednesday night, 6PM, Logan's Roadhouse.

Everyone, members or not, are welcome.

2271. wanting to buy/iso

Yahoo group: IndyHamRadio
Date: 2010-01-25 08:13:12 UTC
From: Jimmy
Topic: 2271 Message: 2271

howdy fellow hams.
was looking to see if anyone might happen to have a 2meter/440 HT they are wanting to sell at a decent price in working condition?brand doesnt matter as long as it tx/rx and is in good shape. dont realy have a lot to spend,but tax time is hear and wife is letting me expand my band usage..lol
if any one has a nice 2meter/440 band ht they are willing to sell,please email me at KC9QDG@...,or message me on yahoo @ fla_tech_2(signed in 24/7) or text me on my cell @ 765-242-1707

thank you and 73's

2272. K7QO CW course, tonight Tue Jan 26, 146.835 rptr.

Yahoo group: IndyHamRadio
Date: 2010-01-26 19:51:50 UTC
From: kc9brz
Topic: 2272 Message: 2272

Tonight, Tues Jan 26, 2010, via the Mid-Start ARC repeater,
146.835 Mhz, I'll be transmitting files 013 through 018, as
modulated CW, from the K7QO Morse Code course.

013 - letter I
014 - letter J
015 - Test on A through J
016 - letter K
017 - letter L
018 - Test on A through L

No special equipment is needed to listen. Just tune in to 146.835 Mhz
(FM) and listen by ear. Therefore, scanner listeners can also hear
it. (146.835 is the _output_ frequency of the repeater.)

-===== The fine print =====-

These will be mp3 files from the K7QO code course, which can
be downloaded in zip format here: http://k7qo.radiotelegraphy.net/
(303 megabytes). These are the exact files I'll be playing.

You can download just the course manual here:
http://www.kkn.net/~k7qo/ to understand what the course is about.
And download just the answer manual there too.

This course uses the KOCH method, which I personally think is the
best way. (Unfortnately, I didn't know that when I started, and
now I have to get the pictures of dashes and dots out of my head.)

-====================

Those who want to use a Windows program to generate CW audio
practice listening, and test their CW copying skills at
various speeds, may download G4FON's KOCH CW trainer at:
http://www.g4fon.net/
I've used that program and really like it.

-====================

Special thanks to Brian Murrey, KB9BVN, who came up with
this idea of using the repeater. And the Mid-State ARC
club and their officers and repeater gurus for hosting it.

-====================

I'll try to remember to pause after every file to ID
and ask if there's any emergency or urgent traffic.

-======================

Other data: the 146.835 repeater is located near the intersection
of State Road 135 and Olive Branch Road, Greenwood, IN 46143.
Latitude: 39.5917 Longitude: -86.1988
Grid: EM69vo

-======================

I can easily pick up with 146.835 repeater as far North
at 62nd Street in Indy, with a 5/8 wave vertical indoor
antenna, and even farther North with an outdoor antenna.

2273. K9STH petitions FCC to establish a 4 meter band

Yahoo group: IndyHamRadio
Date: 2010-01-28 22:24:20 UTC
From: Dan Evans
Topic: 2273 Message: 2273

Per the "suggestion" that "someone" needs to petition the FCC to establish a 4-meter band for amateur use in the United States (the 4-meter band is available in a number of European and African nations) I have submitted the following petition to the FCC:

Glen E. Zook
410 Lawndale Drive
Richardson, Texas 75080
(972) 231-3987
gezook@... <mailto:gezook@...>

27 January 2010

Federal Communications Commission
Office of the Secretary
445 12th Street, SW
Washington, DC 20554

Subject: Petition for proposed changes in 47 CFR Part 97 Section 97.301(a) and Section 97.305(c) to add the 4-meter band

Commissioners:

The 4-meter (70.000 MHz to 70.500 MHz) amateur radio band has been authorized in a growing number of European and African nations and establishing such privileges for amateur radio operators in the United States and other areas over which the Commission has jurisdiction would be of great benefit to those operators residing in such areas. The recent migration of broadcast television stations to primarily the UHF frequencies basically eliminates any probable interference to television channels 4 or 5 which otherwise might have occurred because the 4-meter band is located on frequencies that were allocated to television channel 4. Since the 4-meter amateur radio band does not fall in the 72.0 MHz to 76.0 MHz segment which is allocated to Operational Fixed and various mobile services there would be no potential co-channel or adjacent channel interference.

It is proposed to allow all classes of amateur radio operators operating privileges on this new band. However, it is suggested that Novice Class licensees be restricted to a lower output level than those allowed for Technician Class, General Class, Advanced Class, and Amateur Extra Class licensees. If the present power output limitations of 1500 watts are granted to the higher class licensees then the Novice Class licensees should be restricted to no more than 200 watts power output as per most of the privileges granted those operators who hold a Novice Class license. If a lower power limit is placed on other classes of operator then the power output limits on the Novice Class should be reduced

accordingly. For example, if power limitations of 200 watts maximum output power be placed on Technician Class and higher licensees, then it is suggested that Novice Class licensees be held to no more than 25 watts output.

One possible scenario would be to limit the Technician Class and higher licensees to 200 watts output power for a period of time (i.e. for 2 years) to determine any major interference problems which may occur by establishing these new operating privileges. At the end of that time, then the power output should be increased to the 1500 watts output power now allowed to Technician Class and higher class licensees. The power output allowed for Novice Class operations would then be 25 watts for 2-years increasing to 200 watts after the 2-year time frame.

It is recommended that 47 CFR Part 97 Section 97.301(a) have the following additions made:

Wavelength band Region I Region II Region III Sharing

4m 70.0 ? 70.5 MHz 70.0 ? 70.5 MHz - (a)

and Section 97.305(c) have the following additions made:

VHF

4m MCW, phone, image, RTTY, data, test (2), (5), (8)

Respectively submitted:

Glen E. Zook, K9STH

Whether or not the FCC will even actually consider establishing a new amateur radio band will have to be seen. But, nothing tried, nothing gained!

Glen, K9STH

2274. Support the 4 meter band petition

Yahoo group: IndyHamRadio
Date: 2010-01-28 22:31:52 UTC
From: Dan Evans
Topic: 2274 Message: 2274

Any petition to the FCC by an individual ham will have a difficult time getting any attention. But, if the FCC receives lots of supporting mail, there are successful precedents.

In that light, I would like to help support a letter righting campaign in support of K9STH's petition.

Right now it has no RM number. What it needs is a groundswell of support to get it assigned one.

So at this point in time all we can do -- and I already have -- is to send that note or preferably a QSL card to:

Federal Communications Commission
Office of the Secretary
445 12th Street, SW
Washington, DC 20554

...and on it write "I support the petition by Glen Zook K9STH for the FCC to create a new 4 meter ham band."

And then we hope that the QSL cards catch the eye of enough FCC staff.

PLEASE! Pass this on to anyone you think may be interested. Nets, ham fests, club meetings, etc.!

From: Zack Widup
Topic: 2273 Message: 2275

You have my support! That would be fun, especailly when we get F-propagation up into that range at the next sunspot cycle peak (I hope). Lacking that, the Es season would be fun in that band, too.

Exactly. Name one manufacturer who builds 4m equipment.

While another band might be nice, I'm not sure I see the point. What could you do on 4m that you can't do now on 6m or 2m? And there's plenty of new, used, and surplus equipment already available for 6m and 2m.

I think 4m would be a lot like 220MHz. An interesting band, but not widely used (yes, I know, there are parts of the U.S. where 220 is very popular) and not widely supported.

Bob...

I may be different than most hams in that I built all the VHF+ equipment and antennas I use on all the bands between 50 and 10368 MHz for weak-signal work. By the time I got around to building a 50 MHz transverter I knew enough to just throw some things together to make it work.

In the VHF contests, there is actually a fair amount of 222 MHz activity around. Last weekend I worked as many people on 222 as I did on 144 MHz SSB/CW in the ARRL VHF Sweepstakes. I even got a couple new grids on that band.

So I could probably have a working 70 MHz station in a couple weekends if we do ever get the band. And if you're a weak-signal grid chaser or contester, I'm sure this would count as a new additional band like 902 does now.

Kinda late notice, but if you want some CW code practice
tonight, Tuesday, Feb 2, 2010, tune in to the 146.835
repeater* in Greenwood Indiana, at 7:35 pm eastern time.

This will be files 19 through 24 of the K7QO code course.

file 19 - letter M
file 20 - letter N
file 21 - test on A through N
file 22 - letter O
file 23 - letter P
file 24 - test on A through P.

-Dave A., kc9brz.

the 146.835 repeater is owned by the Mid-State Amateur Radio Club.

2282. 900 MHz Motorola equipment

Yahoo group: IndyHamRadio
Date: 2010-02-03 15:31:57 UTC
From: k9mhz
Topic: 2282 Message: 2282

Hey guys,

I was at a hamfest last summer, and talked with someone whom I can't remember right now. Anyway, he mentioned that there is some 900 MHz activity in Indy, and mentioned a Motorola rig to look for on eBay or whatever, that's good/easy to use on 900 MHz ham freqs. I think it's a mobile rig. Anybody know which model that is?

Thanks very much!

I know there's weak-signal 902 MHz activity in Indiana. I've worked W9ICE on that band, I believe.

But that's CW/SSB and you'd need a narrowband transverter for that, not what you're describing.

Actually, W9ICE lists a repeater on 915.9875/927.9875 on their web site at http://w9ice.com/repeater1.htm. I don't have 900 MHz gear, so I can't verify that it's on the air right now, but I think their web site is pretty up to date.

Yes. I am also talking about contest operation. I haven't heard them in the last few contests, but could always count on working W9ICE up the bands at least thru 902 MHz on CW/SSB in the past. Maybe they got tired of contesting though.
:-)

Most contest weak-signal operation in this area is done on 902.100 or 903.100 MHz. 902 is becoming more and more favored because 903 is noisier.

2290. Viewing the New Star of Ham Radio

Yahoo group: IndyHamRadio
Date: 2010-02-07 19:42:43 UTC
From: Mark Thompson
Topic: 2290 Message: 2290

http://www.arrl.org/news/features/2010/02/05/11327/
Surfin': Viewing the New Star of Ham Radio
By Stan Horzepa, WA1LOU
Contributing Editor
February 05, 2010

This week, Surfin' explores D-STAR via the telescope known as “the Internet.”

The D-STAR Information Site is an excellent place to start learning about the Digital Smart Technology for Amateur Radio.
Digital Smart Technology for Amateur Radio -- better known as D-STAR -- is a means of transmitting and receiving voice and data digitally, rather than via analog means. Developed by the Japanese Amateur Radio League (JARL) and championed by ICOM, the system first hit the airwaves in late 2004.
Like most things that were "new" in ham radio (such as SSB, FM and packet), D-STAR grew slowly at first, but began taking off during the end of the last decade and now has approximately 11,000 users today. Most of those users are on the air using D-STAR repeaters, which number more than 500 worldwide. Linking repeaters over the airwaves and via the Internet provides long range communications far beyond the normal boundaries of 2 meters, 70 cm and 23 cm, i.e., the bands where D-STAR operates.
If D-STAR is of interest to you, there are some Web sites that you should check out. Your first stop should be the D-STAR Information Site http://www.dstarinfo.com/ you will find D-STAR news, applications, maps and a FAQ, as well as many other things that are D-STAR-centric.
Another place to stop is the Independent Radio Club D-STAR Tutorial Page http://www.ladstar.org/tutorial.htm has a short and simple guide that explains the basics of D-STAR.
D-Star Users.org should also be on your D-STAR tour. There you will find lists of active D-STAR users and repeaters, as well as applications that interact with D-STAR http://www.d-starusers.org/solutions.html
Last, but not least, be sure to check out the D-STAR hardware http://www.icomamerica.com/en/products/amateur/dstar/dstar/ from ICOM. Their site also has more details about the mode, as well as a FAQ.
Until next time, keep on surfin'!
Editor's note: Stan Horzepa, WA1LOU, is decidedly digitally disposed. To contact Stan, send him e-mail or add comments to hisblog.

2291. CW code practice on 146.835 tonight, 2/9/2010, 7:35pm

Yahoo group: IndyHamRadio
Date: 2010-02-09 21:26:51 UTC
From: kc9brz
Topic: 2291 Message: 2291

If you want some CW code practice tonight, Tuesday, Feb 9, 2010,
tune in to the 146.835 repeater* in Greenwood Indiana,
at 7:35 pm eastern time.

This will be files 25 through 27 of the K7QO code course.

file 25 - letter Q, 2 min 50 sec.
file 26 - letter R, 2 min 18 sec.
file 27 - test on A through R, 13 min 05 sec.

-Dave A., kc9brz.

the 146.835 repeater is owned by the Mid-State Amateur Radio Club.

2292. Packet Workshop, FEB 27, Lafayette

Yahoo group: IndyHamRadio
Date: 2010-02-11 02:24:56 UTC
From: WR9A
Topic: 2292 Message: 2292

Greetings fellow amateurs!

This is to announce a packet training workshop on Saturday, FEB 27, 9:00 a.m. - 12:00 p.m., sponsored by Tippecanoe County ARES. The workshop is open to all amateurs. It will be held in the Training and Reception Center of Subaru of Indiana Automotive (SIA), on SR38 in Lafayette.

Attendees are encouraged to bring their laptops, TNCs (with manual), and connecting cables. You may also bring your radio and antenna/dummy load, if you like, as we will have a working BBS/node/digi on the air at the training facility. Access to 110V AC will be provided (you may want to bring an extension cord/power strip), and limited 12V DC power will be available via PowerPole connections. (So bring your own 12V DC power supply or battery for your TNC/radio, if you have it.)

This will be a hands-on workshop starting with the basics: getting your computer and TNC to play together, learning some important TNC commands, progressing through the use of nodes and digipeaters, and configuring and using the Outpost Packet Message Manager program

NOTICE: Registration is required for this workshop. There is no fee or cost, but we must be expecting you. Please fill out the registration form if you plan to attend. The registration form, directions, and information about the workshop can be found at:
www.w9tca.com/packet-workshop

This workshop is open to all amateurs, so help us spread the word. Hope to see you there!

2297. CW code practice on 146.835.

Yahoo group: IndyHamRadio
Date: 2010-02-17 17:28:21 UTC
From: kc9brz
Topic: 2297 Message: 2297

Is anybody listening, or getting any benefit, from the modulated CW practice (from the K7QO code course) that I've been transmitting on
the 146.835 on Tueday evenings, 7:35 pm?

So far I've only had one person (who wasn't already involved in it) respond on air.

Would it benefit anyone if we moved it to another repeater towards the North?

With so many computer-based options for learning code available, is the on-air stuff worth it?

Something I've learned:
The Icom-2100, Icom-2200, and Yaesu FT-2600M radios heat up a lot after about 6 minutes of solid transmit, even on low (5 to 10 watt) output.

-Dave A, kc9brz.

It was easy enough for me to figure out (and pretty obvious) that his account had been hacked or he got an e-mail worm. I posted a comment about that and he subsequently posted one that it was the case.

If you haven't read those postings, I'd suggest you read ALL your incoming e-mail before making comments.

I'll be transmitting modulated/simulated CW on the 146.835 repeater
(Mid State ARC in Greenwood) this evening, Tues, March 2, 2010, at
7:35 pm.

Tonight's files will be practice for W and X, then a test of random letters of A through X. These are MP3 files from the K7QO code course. The answer key for the test can be found by doing a search on "K7QO code course". I'm using version 3.1 which is different than version 2.

In order to find out if anyone is benefitting by this, if you hear it,
please ID yourself during one of the breaks or after the transmissions,
or QSL via email to me, kc9brz @ yahoo . com.

Actually, if you want a shortcut, here's the answer key to the 3rd file
for tonight:

Well, I was introduced to the hobby when I was 9 by a minister (50 years ago!). I went out and read everything I could find in the public library about radio and electronics. Self taught myself theory. Eventually had to learn basic algebra well before Junior High.

Given that I am not that smart, merely very motivated, it is possible.

BTW, 8 to 9 is about the right age to get a kid interested in any hobby. Or sports.

Sorry but I have to disagree with you on this point.

I find most of the hams today to be mere appliance operators and stand by my feelings that if this kid was given a test by a regular FCC examiner as we did in the old days he would fall far short of the knowledge needed to be a ham.

When I see a kid of 8 that can show me on a schematic the various parts and the differences between transmitter and receiver circuits I will retract my statement, but being spoon fed by some volunteer examiner will never convince me an eight year old knows one end of a soldering iron from the other.

This hobby has enough appliance operators. j On Tue, 2010-03-02 at 18:41 +0000, Greg wrote:

From: Jimmy
Topic: 2312 Message: 2312

let me just say this!
i have been a group member for some time time now,and normaly dont comment on these post's. but since i am a father of 4,and a ham,electronics tech,and automotive tech,this one caught my attention.
wx9j doesnt believe an 8 year old can"officialy"pass the ham exam due to his/her age?
hear is a honest question,is this hobby and all of it's pepole becoming comunist??????????

you refere to hams as "applience opperators",so i asume you refere to yourself as a master?

who are you,or any other ham to judge weather or not this child was coached or not?
the fact is at least this 8 year old has a chance now to keep this hobby alive as the generations change! does it matter if he had a little help due to a "possibility"of lack of electronics circitry knowledge? at least he has long years in front of him to become a good ham,and possible teacher to others of the younger generation,which is just what this hobby needs!

i gaurentee you wouldnt be saying the things you are if it was your grand child,or child!!!!!! so why criticize this child? at least he took,and passed the exam! there are grown men and women alike who have faild it many times over!

lighten up and give the kid a break,at least now we have the younger generation who just may some day,keep this hobby alive!

let me just say this!
i have been a group member for some time time now,and normaly dont comment on these post's. but since i am a father of 4,and a ham,electronics tech,and automotive tech,this one caught my attention.
wx9j doesnt believe an 8 year old can"officialy"pass the ham exam due to his/her age?
hear is a honest question,is this hobby and all of it's pepole becoming comunist??????????

you refere to hams as "applience opperators",so i asume you refere to yourself as a master?

who are you,or any other ham to judge weather or not this child was coached or not?
the fact is at least this 8 year old has a chance now to keep this hobby alive as the generations change! does it matter if he had a little help due to a "possibility"of lack of electronics circitry knowledge? at least he has long years in front of him to become a good ham,and possible teacher to others of the younger generation,which is just what this hobby needs!

i gaurentee you wouldnt be saying the things you are if it was your grand child,or child!!!!!! so why criticize this child? at least he took,and passed the exam! there are grown men and women alike who have faild it many times over!

lighten up and give the kid a break,at least now we have the younger generation who just may some day,keep this hobby alive!

I didn't start quite that early but I was starting to build little electronics projects when I was 12. All of mine at first used vacuum tubes.

I was also given some non-functioning radios to take apart and use any of the parts as I wished when I was that age. I vividly recall taking apart a radio that would be considered an antique now, and getting a rather severe burn on my left hand from a blob of liquid solder that still leaves a scar to this day.

When I got my license in 1967 at age 14 I was building all sorts of stuff. I started out as an SWL and built a preamp for my shortwave radio using a 6AK5. I was also starting to experiment with transistors then. I built a QRP rig (crystal-controlled) that put out about 100 mW on 40 meters and actually worked a few people with it!

A lot of the new hams I see know a great deal about computers and some may have even built some homebrew projects involving computers, but I don't see too much about new hams building RF stuff anymore. I suspect you're right and that those who do are in the small minority.

And I consider it's the job of guys like me to take the new hams under our wings and teach them things about construction and design that they don't know. Even if it's just simple antenna projects. You have to start somewhere!

Hey Zack,

I, like yourself got involved with ham radio around 11 or 12, Young but still a reasonable assumption that I could handle the material .

There is a hell of a lot of difference between 8 and 12 than just the 4 years.

I am a father of three myself, and a grandfather of two, one being an eight year old, while he is the smartest kid I have known in that age group, he is still not up to really knowing what is going on with electronics.

Like yourself, I have also spent a lifetime in electronics, been working in the trade for over 40 years I was also the president of my old club in Illinois as well as an Extra Class long enough to have had to take my 20 wpm test. Also a VE since '82 I stand by what I said, I do not believe an eight year old can master the technical skills well enough.

No I am not a master at anything. Anyone who has worked in electronics long enough realizes that the science changes too quickly to ever hope to master any phase of it. However, when my stuff breaks, I fix it myself.

> who are you,or any other ham to judge weather or not this child was

Who I am is a private citizen who still has the right to say what they feel.

> the fact is at least this 8 year old has a chance now to keep this

I really doubt this eight year old will be a ham in ten years, with all the computers taking over and the web making two way radio a mute point,

it is more likely he will be found on Facebook or one of the other
social sites on the web/\

You just lost that guarantee, I will not start teaching my grandkid ham
radio till I am sure he understands what it is he is studying. The same
was true for my son when he was a kid.

Subject: [IndyHamRadio] CW code practice, Tues, Mar 2, 2010. 146.835 Mhz, WA9RDF,

I'll be transmitting modulated/simulated CW on the 146.835 repeater
(Mid State ARC in Greenwood) this evening, Tues, March 2, 2010, at
7:35 pm.

Tonight's files will be practice for W and X, then a test of random letters of A through X. These are MP3 files from the K7QO code course. The answer key for the test can be found by doing a search on "K7QO code course". I'm using version 3.1 which is different than version 2.

In order to find out if anyone is benefitting by this, if you hear it,
please ID yourself during one of the breaks or after the transmissions,
or QSL via email to me, kc9brz @ yahoo . com.

Actually, if you want a shortcut, here's the answer key to the 3rd file
for tonight:

>>> It's nice to see we are getting the younger generation into the hobby but I doubt that other than being force fed the correct answers, an eight year old would have any real concept of what he was expected to know for the license.

Ahhh, what difference would it make if he were 8 or 80? Unless you've been under a rock for the last ten years or so, that is how EVERYBODY prepares for the test now. There is no need for "KNOWING" the content, a person only needs to recognize the correct answer - A, B, C, or D. The question pool is provided, just learn the correct answers and poof, you get a license! In fact, back when I took my extra (yes, there was code then), the entire test was more about VE operations and frequencies than any type of electronic theory.

Personally, I always wanted field day operations to be the test. Question One --- we are going to be operating on the 40 meter band. Here is some wire and coax, make an antenna. Question two --- Hook this stuff up and let's get on the air. You get the point!

Congrats to the 8 year old, good for you! Now get on the air and make some contacts --- the license is only the first step! (don't let the grumpy people get you down!)

Mike (N5CEC)

2319. TAPR President Emeritus Dr David Toth, VE3GYQ (SK)

FYI

Our Thoughts and Prayers go out to all His Family and Friends

73 De Don KA9QJG

http://www.arrl.org/news/stories/2010/03/01/11367/?nc=1

TAPR President Emeritus Dr David Toth, VE3GYQ (SK)

David Toth opened the 2008 ARRL/TAPR Digital Communications Convention. Watch the video

www.youtube.com/user/KN4AQ#p/u/6/yBrumFbn05o [Video courtesy of ARVN's Gary Pierce, KN4AQ]

Dr David Toth, VE3GYQ -- President Emeritus of Tucson Amateur Packet Radio (TAPR) -- passed away Friday, February 26after a long battle with cancer. He was 55. A resident of Spencerville, Ohio, Toth served as a Director and Executive Vice President of TAPR in the 1980s and was elected President of the organization in September 2005. With his advancing illness, he decided not to stand for re-election last October and was instead named President Emeritus with Steve Bible, N7HPR, taking the reins as TAPR President.

"Dave was a great manager during his tenure at the head of TAPR," said ARRL Contributing Editor and TAPR Secretary Stan Horzepa, WA1LOU. "I give him a lot of credit for the success of TAPR's involvement in the high performance software defined radio (HPSDR) projects. The ham radio world has lost one of its best with VE3GYQ's passing."

An ARRL Life Member, Toth was a medical doctor who, despite his busy schedule, still made time to be an active amateur. In addition to experimenting with digital communications, he was an avid VHF contester. Licensed since the 1970s, Toth -- a native of Windsor, Ontario -- came to the US in 1993 to practice emergency medicine in Ohio. He was a partner of Premier Health Care Services in Dayton and worked at Lima (Ohio) Memorial Health System and St Rita's Medical Center (also in Lima) until the time of his illness.

"Dave was an extreme pleasure to work with," TAPR President Steven Bible, N7HPR, told the ARRL. "Most people saw Dave's dry wit and humor, but underneath, he was also very passionate about TAPR and promoting the technical side of the Amateur Radio."

QST Editor Steve Ford, WB8IMY, remembered Toth fondly: "After years of telephone chats and e-mails, I finally met Dave Toth in the flesh at the 2006 ARRL/TAPR Digital Communications Conference in Tucson. Some say a brilliant intellect and a well-developed sense of humor are mutually exclusive, but Dave defied the stereotype. It was difficult to keep a straight face at the forums while Dave was muttering irreverent comments. He will be greatly missed."

Bob McGwier, N4HY, who worked with Toth on SDR and other digital communications projects, told the ARRL that Toth was important to Amateur Radio "in so many ways. He was an early member of TAPR, a long time supporter of AMSAT and he gave of his time and talents to promote technical endeavors in Amateur Radio. Dave was an important player in the earliest

days of packet radio in that he helped promote packet and supported it with on the air hardware, but he also participated in the development of a widely used BBS software suite that helped promote packet radio. As a board member and President of TAPR, he helped TAPR become the principal support for Open HPSDR, a project to promote the development of hardware and software for software defined radio use by Amateur Radio. TAPR kitted the hardware developments and made the widely available to amateurs everywhere. Dave was a great confidante, advisor, and friend. He will be sorely missed by all who knew him."

Toth was a private pilot for more than 30 years and an avid amateur astronomer. Since he was a young boy, Toth enjoyed looking at the night sky and reading about space and the stars. He had his own observatory that he opened up on clear nights. Toth was the founding member of the London (Ontario) Astronomy Club and served as its president; he was a member of the Royal Astronomical Society of Canada and belonged to the Lima, Dayton and Columbus Astronomy Clubs.

Friends may call from 3-8 PM Monday, March 1 and 1-8 PM Tuesday, March 2 at the Shawnee Chapel of the Chiles-Laman Funeral Home in Lima, Ohio; a parish wake service will begin at 8 PM on Tuesday. Services will begin at 10:30 AM on Wednesday, March 3 at St Charles Catholic Church. Burial of the cremated remains will be at a later date.

2320. Midstates VE Team

Yahoo group: IndyHamRadio
Date: 2010-03-03 11:51:40 UTC
From: KB9BVN
Topic: 2320 Message: 2320

Yesterday Jim WX9J made a few remarks regarding the 8 yr old that passed his Technician exam on the 20th. We are all certainly entitled to our opinions about 8 yr old hams.

Jim also said:

"When I see a kid of 8 that can show me on a schematic the various parts and the differences between transmitter and receiver circuits I will retract my statement, but being spoon fed by some volunteer examiner will never convince me an eight year old knows one end of a soldering iron from the other."

Having been a member of Midstates Amateur Radio Club off and on for the last 15 or 20 years or so, I saw this statement as an accusation that the MARC VE team had cheated, and we were being accused of spoon feeding this examinee. I was not present for the exam session on February 20th as I had to leave right after the meeting. I can tell you this though, Dave Wendt KA9OOH heads up the VE team at MARC, and he has been doing this for DECADES. His integrity is inpeccable, and the VE team members at MARC are good hams, and honest men and women.

Jim, I suppose I could be misinterpreting your remarks, but it sure looks like you are making accusations about the VE team at MARC. Please explain your comments. If you have proof that any wrong doing was going on at this test session, or any other test session administered by this VE team, I urge you to contact the ARRL at once and lodge your complaint. MARC is a ARRL affiliated club, and the VE Team is ARRL as well. I know there is no proof of any wrong doing because this VE team is as honest as they come.

Hello
I have served with Dave Wendt KA9OOH on several testing sessions,and i can tell you that he runs a very good test session,and there is no one who gets a free ride so to speak.
Everyone earns there license the same way,study hard and pass the test.
One thing i have noticed in the 2 years i have been a VE,young kids seem to retain info better than some of us who are a little older.
Think about a 1st grade student who comes home and can work a computer like its no bodies business.
I can tell you this,im lucky to do some web surfing and check my emails let alone do some of the things that the younger generation are being taught these days.
SO i think that this 8 year old did a great job of getting his ticket...and i wish there were a heck of alot more of our younger generation getting involved with ham radio instead of there darned ipods,cell phones,x-box 360.

Look, in the old days (I took the novice test years ago, call WN9WKU) the novice test was administered locally. The current technician test is far harder than the old novice test. Both are beginner licenses.

But as I put it, I taught myself electronics when I was 9 going on 10. I learned to read schematics and do theory. Kids can do it, if they are motivated.

Yes kids today have issues. But even then we still have those who can do it. Those who have the passion. One thing that helps is having a mentor. In the past that was a grandfather. But today our families are spread all over the US. Thus we have to be a "Grandfather", a mentor, to kids around us. Go find a kid to mentor.

BTW, the state of Indiana is pushing for more of us to mentor kids. In fact they are looking for individuals who can help a kid. Amateur radio is a great way to mentor a kid.

Topic: 2320 Message: 2323

I did not see it as an accusation of anything the MARC VE team did, but rather a comment about the "dumbing down" of ham radio in general. This is very true to someone who got his Novice ticket in 1967 given by a local ham, his General in 1968 and his Extra in 1971 in front of an FCC Examiner .

I have looked over the example question pools for the exams given today, and they are far easier than the ones I took years ago. So I can understand his basic comments but not the tone in which they were made. There are more genteel ways of expressing things.

And as I said, I consider it my job and that of others like me with experience and more knowledge to teach the new hams the "ropes" and help them to become more proficient despite the dumbing down of the exams. I don't foresee a return to the way things were in the 1960's as far as testing goes, so we have to make the best of it if we want amateur radio to survive.

One more thing - i became a ham because I thought radio was MAGIC. After 43 years I STILL think it's magic. All the internets in the world are not going to produce that watery sound of a signal from Russia or Asia coming over the pole. It is not going to produce the thrill of working a new DXCC country or a new grid square on VHF. It is not going to produce the thrill of running stations on Field Day. There just ain't anything else like it and we have to convey the excitement of that to newcomers. They will never know unless we do so. Not everyone willl see radio as magic but the few who do will become hams. And from what I've observed, the percentages of THEM is about the same as it always was.

and

> I do not believe an eight year old can master the technical skills > well enough.

I think you need to (re)educate yourself on the Element 2 (Technician) testing materials. First, knowing "one end of a soldering iron from the other" isn't a part of *any* amateur radio examination. Second, there really isn't any difficult electronics on the Technician test. While capacitors and inductors are introduced, the only circuit analysis involves only resistors. Analysis of more complex circuits (RC, RL, RLC, etc.) is covered in the General Class study guide. I just looked over my Technician Class study guide and the material seems like it could easily be understood -- and mastered -- by an eight year-old. Whether or not the test should be more difficult is beside the point.

The Element 2 (Technician) test only really covers how to get on the air with breaking the rules (FCC regulations) or hurting yourself (RF safety). It is an "appliance operator" test, and I think that is great. It allows people to buy a radio and get on the air, and as their interest grows they can increase their level of technical knowledge and study for the General and Amateur Extra classes. This is perfect for young children who are at an age where motivation is the key to learning.

2325. 8 year old child passes Tech Ham license test, at Mid State ARC.

Heh heh. Good pun.

> it is more likely he will be found on Facebook or one of the
> other social sites on the web/\

Well, as long as he doesn't turn into a crusty ol' curmudgeon
complaining about kids getting into his hobby.

But seriously, so what if the little guy is an "appliance operator" ?
It's the "appliance operators" (most of whom got in after the code
requirement was dropped) who are keeping the manufacturers in
business, and who are keeping the hobby alive and who are keeping
major portions of the amateur bands from being taken by the FCC
and re-allocated for commercial use.

Jack, W9SZ,

You hit the nail right on the head….but truth and fact will only bring you grief in today's world. Your comments were not "politically correct", but good for you. This whole issue is NOT about this 8yr old. Bless his heart and his Elmer for getting the job done well. He was playing by the rules given us by the FCC and administered by a very reputable VE team. This whole thing came about by the manufacturers to sell radios. I lost my crystal ball a few years back, so I cannot say what the new ham will be doing in the future. I'm sure when you said 'dumbing down' you were in no way casting doubts on this particular 8yr old (or for that fact a 50 yr old) level of intelligence. It just appears one no longer has to be "smarter that a fifth grader" to get a ham ticket. I feel the kids of today are actually a little smarter than we were at the elementary school levels of our time. Soooo, why do we lower the standards instead of raising them???

I have an 8yr old grandson who I certainly want to get into the hobby, but only when he is ready.

I thank a veteran every time I see one for the right of free speech. I'm sure more comments will surface on this subject, but I would like to see it wind down. We have flogged this thing enough and nothing is going to change the requirements.

On a closing note…to the 8 yr old and his Elmer. "You did good!"

73's,

Gene K9UOK

Hey Brian

Don't get your knickers in a bind, I never said anyone cheated, what I said is the tests are spoon fed.

There is a vast difference between that and saying there was outright cheating,

If you want to whine about this for the rest of the week, that is your option, if you want to banter with me directly then just call and quit wasting space.

Like I said Brian, if you can prove an eight year old has the fundamental knowledge, I will eat my Ticket on the steps of the Red Cross.

If he can't are you willing to do the same.

Put up or shut up

Jim

I don't want to get in the middle of a word war here, but I feel compelled to put in my $0.02 here for what it's worth.

I certainly don't think EVERY child could know what was going on at age 8, but I most certainly know that some can... because I did.

I passed novice at age 5 in 1976 (which was given locally), and the questions were not published. I copied 104 CW characters in a row, and passed the written test on the first try. Technician at age 6, general at age 7, and advanced at age 9 followed.... all in "the old days" when the pools were not published (and when you had to take the test from an FCC examiner). I didn't take the extra exam until I was 18, which was after the question pools were published but right before the 20 wpm CW exam was dropped. I just didn't want to take on the challenge of code at 20 wpm. The opportunity to be a VE was the incentive I needed to take on 20 wpm.

Knowing how to use equations like Ohm's law and metric conversions helped me a lot in school, especially in science and math. It's one of the many reasons I sponsor ham radio club here at the high school in which I teach. It helps reinforce things that I'm trying to teach in chemistry. Of course, these kids are 14-18. But there are many elementary and middle schools out there teaching ham radio to reinforce those concepts in their classes with tremendous success. In fact, in most the focus is to teach the technology skills, not the license. Some decide to go ahead with the license, but some don't. At the Dayton young ham forum, there were 2 boys, one was 8 and his brother was 6, who both already had DXCC!

So I know, as usual, I'm one of the exceptions to the rule. But I knew what was going on, and learned an awful lot from and about ham radio at age 5.

Jim,

I challenge you to retake the extra test --- today!

I've got the testing materials right here, and would be happy to meet you and two or three others anywhere --- just to see if you can do it!!

(Personally, I doubt that I could pass it cold turkey, and I administer the doggone thing.)

So, put up or shut up. The challenge is on the table!

CONGRATULATIONS TO THE 8 YEAR OLD PASSING THE
HAM RADIO EXAM...

I can appreciate free speech expressions as we are all basically entitled to them within some reasoning and in this case ham radio.

With that in mind I also take some exception regarding the remarks made by Jim/WX9J pertaining to someone 8 years old earning their ham license at a VE test session. Unless those remarks were just simply a wrong choice of words, it appears to me Jim is indicting the VE team in some manner. Hopefully that is not what he really meant to say as the VE program has been very successful in my opinion by flushing out those who really did compromise exams in past years. I agree with Brian/KB9BVN, if you have knowledge of any wrong doing then take the appropriate action. I doubt that there was any real problem myself.

The eight year old in all probability took the same basic exam as anyone else does at VE test sessions so it does not matter if you are 8 or 88. Age is not necessarily a barometer to gauge or judge someone who does pass exams. We would need to put the exam in another perspective. For example a senior who is now retired from 30+ years as a painter comes in and successfully passes a Technician exam. Now there is no guarantee that senior can show you on a schematic about circuits or have knowledge of electronics either.

There were numerous reasons back in the "OLD DAYS" for the way ham radio exams were given by the FCC examiners. Many of the old timers were not necessarily electronic engineers building those home-brew transmitters that threw out harmonics, chirps and other problems. There was more of a need to know some of those basics to pass exams. Unintentional out of band operation was another problem to deal with too.

Now fast forward to our current era of ham radio where most of us use commercially manufactured products we surely do have a lot of appliance operators referring to transceivers. Now I do not want to condemn that either since it is the individual operator who makes it good, bad or indifferent. In that regard just listen to the trash on 3910 khz and tell me these are young inexperienced hams.

Further I believe the FCC in conjunction with amateur radio made the determination as to specifics of how radio exams are to be conducted along with the question pool contents. Changes come

along as needed to fit the situation. Licensed hams do have an opportunity for input to that question pool.

Also many of us entered ham radio as novices. Today the entry point is a Technician class by name. I find that Technicians do contribute a lot as they develop. By some definitions I am also probably a appliance operator active on the bands rather it be ITN, VHF Packet, CW or other modes.

That is my opinion and I am not intentionally slamming Jim as he is certainly entitled to his personal thoughts.

Don /KA9QWC

Yesterday Jim WX9J made a few remarks regarding the 8 yr old that passed his

Technician exam on the 20th. We are all certainly entitled to our opinions

about 8 yr old hams.

Jim also said:

"When I see a kid of 8 that can show me on a schematic the various parts

and the differences between transmitter and receiver circuits I will

retract my statement, but being spoon fed by some volunteer examiner

will never convince me an eight year old knows one end of a soldering

iron from the other."

Having been a member of Midstates Amateur Radio Club off and on for the last

15 or 20 years or so, I saw this statement as an accusation that the MARC VE

team had cheated, and we were being accused of spoon feeding this examinee.

I was not present for the exam session on February 20th as I had to leave

right after the meeting. I can tell you this though, Dave Wendt KA9OOH

heads up the VE team at MARC, and he has been doing this for DECADES. His

integrity is inpeccable, and the VE team members at MARC are good hams, and

honest men and women.

Jim, I suppose I could be misinterpreting your remarks, but it sure looks like you are making accusations about the VE team at MARC. Please explain your comments. If you have proof that any wrong doing was going on at this test session, or any other test session administered by this VE team, I urge you to contact the ARRL at once and lodge your complaint. MARC is a ARRL affiliated club, and the VE Team is ARRL as well. I know there is no proof of any wrong doing because this VE team is as honest as they come.

Mike,

No doubt in my mind - I probably would not
pass the test either hi. And I say that basically
for grins/giggles. I just grad'em & don't read
them.

Seriously and I left it out in my other post
I imagine WX9J & others certainly could
teach me a few things about electronics.

I do not want to claim being the sharpest
tack on map-board but hope my operation
meets the amateur radio standards expected.

Don /KA9QWC

>>> Like I said Brian, if you can prove an eight
year old has the

fundamental knowledge, I will eat my Ticket on the steps of the Red

Cross.

Jim,

I challenge you to retake the extra test --- today!

I’ve got the testing materials right here, and would
be happy to meet you and two or three others anywhere --- just to see if you
can do it!!

(Personally, I doubt that I could pass it cold turkey, and I
administer the doggone thing.)

So, put up or shut up. The challenge is on the table!

Lets look at several issues being presented.

WX9J suggests that current applicants are being "spoon fed" due to the use of newer, post Bash Books (late 1970s), style of licensing manuals. In other words, like the Bash Books, you have the whole answer pool. Also we no longer have a code test (though that did little to get rid of bad operators).

I would say that whether you have the test pool to study from or just go over the material (like the ARRL manuals do), one is going to be learning concepts. It depends on the mentor one has. In the old days it was hard to learn without a mentor thus you had similar "spoon feeding" as the old timers knew what you had to learn and taught that material. Kids like me, who basically had to learn on their own, had a harder road to travel.

The current Tech test is harder than the old Novice test. PERIOD. General is still about the same. And the step up to Extra is harder as we have gone backwards and gotten rid of the intermediate step of Advanced class. Plus the Extra now has the material of both the Advanced and Extra like it did back in the 1950s and 1960s.

It is possible to learn, even at that young age. You did it, as did I.

>
> I passed novice at age 5 in 1976 (which was given locally), and the questions were not published. I copied 104 CW characters in a row, and passed the written test on the first try. Technician at age 6, general at age 7, and advanced at age 9 followed.... all in "the old days" when the pools were not published (and when you had to take the test from an FCC examiner). I didn't take the extra exam until I was 18, which was after the question pools were published but right before the 20 wpm CW exam was dropped. I just didn't want to take on the challenge of code at 20 wpm. The opportunity to be a VE was the incentive I needed to take on 20 wpm.
>
> Knowing how to use equations like Ohm's law and metric conversions helped me a lot in school, especially in science and math. It's one of the many reasons I sponsor ham radio club here at the high school in which I teach. It helps reinforce things that I'm trying to teach in chemistry. Of course, these kids are 14-18. But there are many elementary and middle schools out there teaching ham radio to reinforce those concepts in their classes with tremendous success. In fact, in most the focus is to teach the technology skills, not the license. Some decide to go ahead with the license, but some don't. At the Dayton young ham forum, there were 2 boys, one was 8 and his brother was 6, who both already had DXCC!

Just remember that the whole series of ham testing is still not as hard as the GROL! Let alone what I had to do in getting an Electrical Engineering degree. If you really want bragging rights then get a Ph.D in EE or Physics. Otherwise you really do not have any understanding of electronics. Especially in how to mathmatically model a circuit.

As for troubleshooting, that is a lost skill. Most companies now use machines to do that. Or just DX the boards (boards are treated more like ICs and replaced).

BTW, it is far harder these days to get an engineering degree due to the fact that we have calculators and computers. The homework is unbelievable.

Jim,

Your comment that the VE's were spoon feeding an examinee sure sounds like you are saying we are doing something wrong. If that is not what you meant to say, then great, but it sure looked that way to me. I welcome the young man into the hobby and I hope he brings everyone in his third grade class to test with us next month. He has passed the requirements to have a Technician license, he's now a legally licensed amateur radio operator. Like every ham I know, he'll get better at it, the longer he's in the hobby but we all have to start somewhere.

I'm not whining Jim, just standing up for some fellow hams that I know, I'd do the same for you. This 8 year old proved he has the fundamental knowledge to be a Radio Amateur, he did that by passing the exam. Please don't eat your ticket though.

You seem a little edgy, I hope you get it worked out soon.

From: Zack Widup
Topic: 2326 Message: 2336

Thanks for the comments Gene.

I took the Extra in 1971, as I mentioned. I haven't taken a ham radio exam since then. But a year or so ago I took a look at an example exam for the Extra that is on-line and filled out the answers. I missed one question having to do with a rule that had changed that I didn't know about. So I reviewed Part 97 and now I know.
:-)

I am happy when ANYONE gets a new license. I surely didn't know everything when I got started and it took a couple years to get my code speed up to 20 wpm. It took more years than that to learn the nuances of things like contesting, DXCC, etc. and I'm still learning when it comes to building millimeter-wave equipment. 47 GHz is sure different than 40 meters!
:-)

Hey Mike

Yours was about the most intelligent response I have read to date.

Not only do I doubt I would pass, I doubt any of the VE's would pass.

That is not as important as the fact that if you asked a kid of eight how many megs 3500 Hz is they would be clueless.

In fact I posed that question to an Extra just last evening and he could not give me the correct answer.

I do not expect anyone to remember a test they took weeks or months ago. >From what I learned in school, we retain less than 30% of what we are taught in class.

What I was questioning was not did he know each test question, hell a lemming can pass one of these tests with enough time to memorize answers.

It is the grasp of concepts, ie what happens to antenna length vs freq, stuff like that that any good operator should know. or even something as simple as how close to the band edge he can operate taking his offset to the main dial into consideration.

I am sorry so many of you feel this was a personal attack, it was not nor was it meant to be. Just an opinion by another voice on this reflector.

Regardless of how any you feel about my comments, they are just my opinion and the only way to change them is to prove me wrong.

Jim

Not to beat a dead horse (which I think this clearly has become), but you can look here to read about more young amateurs:
http://forums.qrz.com/showthread.php?t=189205

Tech at 6 years old, General at 7, and in January of this year, passed her Extra exam at age 9. Her father defends her validity at the top of page 5 of that QRZ.com thread.

Then there's the 7 year old Extra:
http://www.arrl.org/news/stories/2004/01/29/1/

Kudos to all of the young hams out there. They will keep the hobby alive as we old farts die off.

Sure ham radio has changed, and should keep doing so. If it doesn't change and grow, it dies. And didn't most of us start out as appliance operators? (Unless you already had a EE degree when you got your first ham license.)

The old Tech exam was just an older General exam that had been retired. So it, of course, was more difficult than the Novice exam.

I almost forgot all about the following. My Elmer recommended I take the Technician exam in 1968 to get the feel for the General before I went to Chicago to take the General exam in front of the FCC. So I did, and had a Technician license for about a month before I upgraded to General.

Of course I did. My dad and I went to ham class together, and got our licenses at almost the same time. The Old Post ARS in Vincennes was (and is!) a great group of people who helped me along, especially with operating procedures. But I made my first contact on HF CW the second my ticket arrived... while Dad was working overtime. I did it by myself. I knew how to adjust the length of an antenna, because we did it together. And, I learned how to convert Hz to MHz because the rig had one, and the log book had the other. So a five year old can definitely do and understand all that.

2343. Re: 8 year old child passes Tech Ham license test, at Mid State ARC

Yahoo group: IndyHamRadio
Date: 2010-03-04 00:23:10 UTC
From: W3ML
Topic: 2312 Message: 2343

I, for one, am happy to see a younger person get a license. We need to be recruiting more young people.

It doesn't matter whether the kid can understand electronics or just memorize the question and answer. That is how people are doing it now that they publish the correct answers and questions on the web.

Gone are the days when we went to the FCC and sat in front of an examiner to take a test. The last one I took like this was for my Advance.

When I moved from Terre Haute to Knox, one of the first hams I talked to up here was a guy in his late 40s that was an Extra Class and was asking people how to attach a coax connector to coax, as he had no idea of how to do it.

Now that was horrible in my book.

I hope the young man continues to learn more about our hobby and electronics.

I was 16 when I built my first transmitter. At 17 I worked half days repairing Zenith TVs in a local Zenith factory repair shop.

So maybe he will go on to learn how to repair these new radios we have now that take someone young with good eyes just to see some of the parts in it.

From: jim
Topic: 2320 Message: 2344

Hey Brian,

I will say again, I meant no discourtesy to the VE (a man of very solid reputation, and very knowledgeable person in electronics.) or to the club that ran the tests. I applaud any hams who are willing to go the extra mile.

The same goes for you Brian, I believe you are a the type of individual that is sorely lacking in this hobby today.

I also did not intend to disparage any young man that went through the trouble to take the time to study. My only opinion was as I have repeatedly stated, with the tests today, one can pass it and still not have any fundamental knowledge of how the equipment works.

This is a far departure from the origins of our hobby, when operators built stations.

Oh, and I am not overly edgy at this time my friend, just love a good banter and I am sure that you and I will do so again and again.

psssst: hey, guys...

the test is supposed to be easier so that pretty cheerleaders will get into the hobby...

who do YOU wanna sit next to at field day?

take the "problem" and work it to your advantage...

now get to it!

Miss Ham Indiana 2010 at the hamfests will be judged by a short-haired guy in a pink shirt, i heard...

(i swear i'm on decaf)

Glad we have this Yahoo Group down here to talk about ham radio issues, we really need to think about starting some up in the northern part of the state. But you know there is some folks that just don't have the time to use these types of communications.

What, you mean people are too busy talking on the radio, instead of hammering away on a keyboard??? MMmmm. how could that be?

I just looked outside and noticed the 100 feet of tower (Rohn 45/25 mix) that's been laying in the woods for nearly 13 years now. Perhaps I should think about becoming radioactive again.. Now for some of that "spare time" stuff!

(Actually, my current new hobby is beekeeping. Fascinating little creatures!)

Mike (N5CEC)

Glad we have this Yahoo Group down here to talk about ham radio issues, we really need to think about starting some up in the northern part of the state. But you know there is some folks that just don't have the time to use these types of communications.

2360. Dinner 3-13-10

Yahoo group: IndyHamRadio
Date: 2010-03-11 01:27:03 UTC
From: n9wvv
Topic: 2360 Message: 2360

When: 3-13-10 at 7:00 pm
Where: Murphy's Steakhouse
4189 N. Keystone Avenue
Indianapolis, IN 46205

Who: All is welcome.It is just some ham getting together and telling some storys. We have a yahoo group if you want to see some pic's of the dinner we have had. It is nine_lander Hope to see you all there.

2361. Bus to Dayton Hamvention

Yahoo group: IndyHamRadio
Date: 2010-03-12 23:45:49 UTC
From: Ray - K9DUR
Topic: 1583 Message: 2361

The Wabash Valley Amateur Radio Association, Inc., is once again sponsoring a 47-passenger travel bus from Terre Haute to the Dayton Hamvention, with stops at Brazil, Cloverdale, Plainfield, & Indianapolis. We have held the cost despite rising costs & falling ridership. In fact, we have even reduced the price for non-members & added an early-bird special for everyone.

Bus drops off in front of the main entrance to Hara Arena. Bus is available all day so you can store your "goodies" without having to haul them around all day.

Bus is an air-conditioned, 47-passenger tour bus provided by Turner Coach. The bus leaves the Turner Coach lot on the south side of Terre Haute at 4:30 AM EDT. The bus stops for pick up at the following locations:

Brazil (I-70 & SR 59 - At truck stop on SW corner of SR 59 & SR 42.)
Cloverdale (I-70 & US 231 - At Cloverdale Truck Stop.)
Plainfield (I-70 & SR 267 - Near Subway on NE Corner of Interchange,)
Indianapolis (I-70 & Post Rd. - At Indiana State Police Post just west of Post Rd. on 21st St.)

The bus will stop for breakfast (fast-food) in Richmond, IN, & should arrive at the Hamvention about 8:30 or so. Bus leaves about 4:00 PM & stops at Shapiro's Deli in Indianapolis for supper.

Tickets from Terre Haute, Brazil, or Cloverdale cost $25 if purchased prior to April 1, 2010 & $35 thereafter. Tickets for pick-up at the Plainfield or Indianapolis stops are $25.

To purchase tickets, send check or M.O. to:

Nick Vinardi, N9WG
Post Office Box 172
New Goshen, IN 47863

Indicate the number of tickets & desired pick-up point.

For further information e-mail Nick at daytonbus@....

2366. Columbus hamfest NTS get together

Yahoo group: IndyHamRadio
Date: 2010-03-25 11:18:00 UTC
From: W9ILF
Topic: 2366 Message: 2366

Vernon NA9L and I were talking about getting together to talk about the National Traffic System for a lunch meeting during the Columbus,IN hamfest This Saturday. We are thinking about finding each other around 11:30 and heading off site, but I see in the flier that food & drinks available so we can play it by ear. It will just be a fun lunch to catch up and discuss things that could improve our traffic at all levels of the NTS. I will monitor 146.500 simplex so if you would like to join us but can't find were we are at 11:30 give me a shout and we will make our plans from there.

IVIN / W9ILF,

Wanted to comment on the food/drinks available from
my 1 experience at this hamfest. Unless there have
been any changes the table space would be scarce to
sit at from my memory. If there is another separate
room available that would be a plus. Again just going
on my old experience.

At this point in time not sure if we will be down there
or not. Always seems like we get some sort of conflict
but sure hate to miss the eyeball QSO'S.

I just now read some web pages at ARRL.org on the NTS, and I have
a picture of the mechanics, but I'm not seeing the big picture of
how it's used in a non-emergency situation.

Can you give me the 30 second executive overview?

I can envision what sort of messages are passed and their purpose for emergencies, but
those web pages at ARRL don't give me any clue about
what "message passing" is in non-emergency or routine situations.

Is it for when phones are out of service in the source's town?
For people who can't afford long distance?

Can you paint me a picture? I'm totally clueless, but I get a
feeling I should know something about it?

Thx.

Go back to the ARRL website and search for ARRL Radiogram.

NTS carries random messages of goodwill between hams, I know several guys that play chess over the NTS. The Radiogram looks a lot like a telegram.

When I get home I will see if I can find my traffic manual and I will send you a copy. It's alot of fun, but 90% of it is on 80m and I don't have 80m ability at home.

Here is a link to a Radiogram Form:
http://www.arrl.org/FandES/field/forms/RADIOGRM.pdf

Here is another great link about the NTS:
http://www.qsl.net/n5lf/cw-nts.html

A lot of "Routine" non-emergency traffic used to be handled by NTS. Maybe it still is. I got one sent to me by another ham just a couple months ago. See the list of messages that have standard ARL numbers, particularly the Group 2 messages beginning near the bottom of page 2.

I've been going to the Columbus fest for many years, it's one of my
favorites:-)

And you are correct, there are tables available, but they typically have
a big turn out, and a very small building so it's still hard to find a
seat. At least during peak times. By 11:30, however, the crowd will
likely be thinning considerably.

Good luck, and hope to see you all there!

In the beginning of amateur radio, communicating over long distances was difficult because of the bands they were using, the equipment they had available, and the lack of understanding about radio wave propagation. So, a standardized way of passing messages from station to station was developed. If you were in New York and wanted to send a message to someone in California, your message might be relayed by several stations before it reached its final destination. That's where the name of the ARRL -- American Radio Relay League -- came from.

Remember, that international and even continental communications, in anything close to real time is a fairly recent invention. Back in the 1960's when I was a kid, we didn't make long distance phone calls from our house unless it was really important. And when you did make a LD call, you kept it short because the LD charges were expensive. And making a call to someone overseas was very rare. My sister lived in Germany from 1964 to 1967 and I think we only talked to her once during that time.

So, sending non-emergency messages by amateur radio radiogram through the National Traffic System was promoted as a way to get a message to someone quicker than using the postal service and cheaper than making a long distance phone call. The only other alternative was a telegram through Western Union, but that was also expensive.

At the risk of annoying my fellow hams who are active in traffic passing, I think the whole idea is somewhat old fashioned today. Cell phone minutes are affordable and long distance is usually included. Email is pretty inexpensive because even if you don't have an Internet connection at home, you may have access at work, school, or through a local library. And, if you have an Internet connection, voice over IP is an alternative, too. The idea of sending a routine radiogram through amateur radio makes most people ask "what's the point?"

On the other hand, practicing traffic handling in the structure of the National Traffic System could be of benefit in a large scale disaster. As we learned from Hurricane Katrina, when the cell phone towers, land line phone switches, and Internet backbone are either destroyed or overloaded, you have to revert to the systems that work. The advantage that amateur radio has is that we have a broad range of frequencies to choose from which allows us to adapt to changing communications

conditions and we are relatively independent of a fixed infrastructure. Guys like Brian and Ivan can go into a disaster area with all of their equipment in a backpack, throw a wire up into a tree, and start communicating with the rest of the world even when cell phones and the Internet no longer function.

Now that you have had the 30 sec version
If that does not answer your question you can read the Long version
the NTS-MPG it will take about a Ream of paper to print but comes in pdf format. It cover every mode and all parts of the NTS.
You can find it on the ARRL web site.
It is so large it takes more than one file so be sure to get all 14 or 15 files.
Hope you will join us as a traffic handler some time. We can always use more traffic handlers its good to know in an emergency.
Thank you for your interest in this great part of the amateur radio hobby 73

2380. Re: [IndyHamRadio] NTS?

Yahoo group: IndyHamRadio
Date: 2010-03-26 11:46:42 UTC
From: kc9brz
Topic: 2380 Message: 2380

On their web site, ARRL did a good job explaining the multi-level hierarchical layered stuff in NTS, but they never answered the question "why?", outside of emergencies/disasters.

I was asking myself what Bob Burns said: (Aside from emergencies) "what's the point?"

So from what I gather here, the purposes of NTS, when there's NOT an emergency, is:

1. to play chess.
2. to practice _for_ when an emergency/disaster occurs.

In essence, #2.

Customgraphics has a point about ARRL manuals being overly wordy and hard to find what you need, but also leaving out stuff that's essential to newbies, and assuming too much prior knowledge on the part of the reader. (Fer instance, I prefer Gordon West's license manuals, and recommend those books to people wanting to get into ham radio.)

I bought 5 manuals from ARRL:
- General license manual - sucks.
- Extra license manual - sucks.
- The ARRL Handbook for Radio Communications - sucks and overpriced.
- The ARRL Operating Manual - sucks and overpriced.
- Emergency Communication Handbook - sucks.

(Are we allowed to say "suck" on this Yahoo group?)

Two final questions:

1. How do you insert or initiate a message _into_ the NTS system?
2. How does someone receive a message out of the NTS system?

-kc9brz, dave.

2381. Re: [IndyHamRadio] NTS?

Yahoo group: IndyHamRadio
Date: 2010-03-26 12:32:29 UTC
From: Ivin Flint
Topic: 2380 Message: 2381

The purpose of the NTS when there is or isn't an emergency is to deliver a message through a network of radio operators.

1.) You get a message into the system by finding a local ham that will take originate a message for you. OR

Form the message yourself using the correct format. If you need help with it I will help you off the reflector. The ARRL Amateur Message Form FSD-218 is a good tool for forming a proper message. Then show up on a net. Check in correctly stating your traffic when called for and where it is destined for. Follow the Net Control's instructions on who to give the message to.

2.) Someonereceives the message out of the NTS by a ham delivering the message to the person it is destined for outside the traffic system. It is usually a local ham that lives in the town the receiving party lives in, OR, if you are a ham involved in the National Traffic System you might get your message when you check into the net directly from the NTS.

The NTS has a long tradition. When I got into ham radio 5 years ago I heard about CW nets by reading a FISTS CW Club publication and I wanted to try it and see what it is like.

I started with CW because that is what I enjoyed and wanted to do. It took me a lot of work to learn the proper way to form a message, check into a net, and send/receive traffic. This tradition of being a CW traffic handler was passed on to me by hams who also took the time to learn it and be proficient. I now carry the skills with me that generations of good CW operators learned and passed down through the years.

Thanks to Vernon NA9L, Richard K9PUI, and Steve W0SJS for their unending patience with me and the time they have given. Them and many others have become close friends because of our common interest in the NTS.

Last year when I went to Dayton within 10 minutes of being inside the main arena a guy walked up to me and shook my hand though he had never seen me before or heard my voice. He knew me from one of the CW traffic nets. I will never forget it.

Give it a try, Gain Life time friends.

Ivin

On their web site, ARRL did a good job explaining the multi-level

hierarchical layered stuff in NTS, but they never answered the question

"why?", outside of emergencies/ disasters.

I was asking myself what Bob Burns said: (Aside from emergencies)

"what's the point?"

So from what I gather here, the purposes of NTS, when there's NOT

an emergency, is:

1. to play chess.

2. to practice _for_ when an emergency/disaster occurs.

In essence, #2.

Customgraphics has a point about ARRL manuals being overly wordy

and hard to find what you need, but also leaving out stuff that's

essential to newbies, and assuming too much prior knowledge

on the part of the reader. (Fer instance, I prefer Gordon West's

license manuals, and recommend those books to people wanting to get

into ham radio.)

I bought 5 manuals from ARRL:

- General license manual - sucks.

- Extra license manual - sucks.

- The ARRL Handbook for Radio Communications - sucks and overpriced.

- The ARRL Operating Manual - sucks and overpriced.

- Emergency Communication Handbook - sucks.

(Are we allowed to say "suck" on this Yahoo group?)

Two final questions:

1. How do you insert or initiate a message _into_ the NTS system?

2. How does someone receive a message out of the NTS system?

As I mentioned before, I got a Radiogram message left on my phone answering machine a while back. I forget what the exact message was, but it was something like "Your radio has been shipped today." I'm guessing the other station sent it that way just for fun, being an old brass pounder himself.

If you listen in on some of the brass pounders' nets (they do still exist) you will hear there is still a lot of routine traffic being sent besides chess games.

(MY 2 CENTS)

Dave / KC9BRZ,

You are not alone in regards to inquiring about the NTS as many have went through that threshold in the past to learn the big picture and mechanics so to speak.

I do not claim to be an expert on the traffic nets as there are a lot of good message handlers out there who know the ropes much better than me. Plus I take note several have provided their thoughts previous to my email on the subject.

The best references I have read so far pertain to one being familiar with the traffic net procedures and to basically join in to get your feet wet. I do not think anyone is going to criticize unfairly but on the other hand may offer some constructive type advice to help.

During an emergency is not exactly the best time to start learning about traffic handling. By that I mean if you receive a check of ARL13 in the preamble of a message and have to question what it means only causes delays by having the sender stop to explain everything. But if you have been handling traffic all along it would be second nature of what to expect.

Also one can think of the NTS as a big map for a path from coast to coast and beyond. If you are not familiar with that map and travel down that highway only to find the bridge out - what are you going to do next?

Don't be shy about getting on the nets and at least to try it out for a while on voice, CW or digital. The CW nets locally will operate at your speed of comfort during your turn at the key. Then you can possibly make a more informed decision if it is your cup of tea.

And if you want to ragchew (chat) a bit on CW my FISTS number is 5668 - I most often use a keyboard but still have my old simple Novice key that gets used at times.

Hope to hear you on the air?

Don /KA9QWC

I just now read some web pages at ARRL.org on the NTS, and I have

a picture of the mechanics, but I'm not seeing the big picture of

how it's used in a non-emergency situation.

Can you give me the 30 second executive overview?

I can envision what sort of messages are passed and their purpose for emergencies, but those web pages at ARRL don't give me any clue about

what "message passing" is in non-emergency or routine situations.

Is it for when phones are out of service in the source's town?

For people who can't afford long distance?

Can you paint me a picture? I'm totally clueless, but I get a

feeling I should know something about it?

Thx.

2386. Re: NTS?

Yahoo group: IndyHamRadio
Date: 2010-03-26 23:32:59 UTC
From: Joe
Topic: 2380 Message: 2386

The local/section/region/area hierarchy of NTS wasn't really
my question. That was answered by the ARRL web pages right off the bat, and it all makes sense to my anal-retentive mind that has
made me a computer nerd for 38 years.

It's the practical applications in non-emergency mode, and the NTS
interface to the non-ham world that was left hanging.

So let me see if I get this straight.

To _initiate_ a message into the NTS system one would:

1. if you're a ham, check in to a _local_ (or section/state?)
NTS net (voice or cw), and using the protocols, indicate
you have a (or X number of) message to go "out there". And
you wait for the Net Control's instructions before proceeding further.

2. If you're a ham, but for some reason can't or don't
know how to check in into a local/section net, try to raise
someone on the air (anywhere on any legal frequency) who can
check into his/her local/section net. And you say to this
person "hey buddy, could you please pass a message into your
local (or section?) NTS net for me?" If he says yes, then
you give him the message in NTS format, or ask him to format
it in NTS format if you don't know how.

I suppose you could initiate the message via fax or email or any transmission method to your "NTS ham buddy" too. Maybe if I
lived next door to Brian, I could use Boy Scout Semaphore
signals to send him a message to pass on to the NTS.

3. If you're not a ham, but you know about the NTS, you need to
know, or somehow make contact with, a ham who does know how
to initiate a message into the NTS. Or, if your ham-buddy
doesn't know about NTS, you need to give him enough to go on
so that he can raise someone on the air who does know how to
insert or intitiate a message into the system.

=== On how messages get OUT of NTS to the "non-ham" world ==

1. The originator of the message needs to spell out
in the message header how it should be delivered, preferrably
by voice phone as that seems the most common. But I suppose
the originator could ask for it to be delivered by fax or
email, and possibly give a prioritized preference.
I realize NTS message formats allow for physical delivery too.

2. So when the final ham at the _bottom_ of the hierarchy (network
structure) who is the most local to the intended recipient, gets
the message, he is likely going to phone the recipient. But if the message gave alternate
delivery methods such as fax or email, he might do that instead.

3. Am I correct in assuming that physical delivery is not a
practical real-world option for non-emergency traffic?

==== Possible real world non-emergency scenarios ===

1. Suppose I'm out camping (with my battery operated radio
gear of course), out of cell phone tower range, and
I want to send a message to Mom. If I knew the schedule
of the local (or sectional?) NTS net, I could check into
that net directly and initiate a message into the NTS.

2. If I didn't know any schedules, either local, or within
communication range, I could still use any legal ham
frequency to raise any ham anywhere and ask "Hey buddy, can you
get a message into your local NTS net for me?" And if
he can, or knows someone who can, give him the message
with the necessary info.

==========

So is that basically how it would work in non-emergency
situations?

==========

In practicality, if I'm out camping, and want to get a
message to Mom, I suppose that I could also probably raise
any ham (anywhere in the continental US) on any legal
frequency, and just ask "hey, buddy, do you have free
long distance, or email handy? Can you either send an
email or phone my mom to give her a message for me?"

And I'd bet most hams who had free long distance,
with unlimited minutes or free night/weekends, would probably
relay the message directly to mom, that her favorite son
is enjoying the campout and everything's fine. Which I
suppose would be an "ad-hoc" or "do-it-yourself" NTS.

Had I known that, I may have become involved locally after several years as sysop of AEM1AGG in Ansbach, Germany! That was way back before internet and email. It was either a telephone patch (average 300+ per month), or a marsgram (~150/month). Aside from a letter taking nearly 30 days through the wonderful APO system, we were all there was!

I'm glad that you guys are there, and that you all do what you do, but it's all WAY too much protocol just to be able to pass traffic!

Mike

Oh Bob...that whole T shirt thing sounds like a great way to make money at Dayton! Except....I think it is supposed to say "Chicks DIG NTS Dudes" hahahaha.

I can't go to a hamfest and not think about my good friend Jack Palladay N9ICE(SK). He was an awful good egg and we enjoyed many week day lunches at the Chinese buffet at Hanna and Madison. He was a regular user of the SouthSide BBS, that's where I met him. He was the one that talked me into going with him to the classes at the Red Cross in 1988. His orginal Novice call was KB9BUT...so he immediately upgraded to Tech so he could get a new call...and that's how he got N9ICE. We were hoping that my call would come in as KB9BVD but I missed it by just a few. Hahaha.

In 22 years as a ham I have tried to be a good Elmer when I could, and I'm always happy to share the hobby with someone at just about any time. It's a lot of fun. Guys like Mike N5CEC, Dave KA9OOH, Rick KB9NDF, Dave N9FOZ (somewhere in FLA now I think), and too many that I am forgetting, made the hobby more fun for a lot of people. We're all supposed to be "Ambassadors of the Goodwill" or something like that, and the hobby needs more Elmers.

Hope to see you at Columbus in a few hours!

Thanks to all who responded about NTS.

My interest is not so much in being a message-handler in NTS, but more of a "user". And perhaps for the purpose of educating non-hams about what hams can do in emergency and non-emergency situations.

The camping scenario, and cell-phones (but not land lines) being down scenario, seem to be the most likely in my opinion.

Look at this Cell phone coverage map, of GSM coverage by Net 10, which is the same as Trac-Phone.

http://www.net10.com/content/mappopup.jsp

Just in our region of the country, look at the big holes in Eastern Kentucky and West virginia.

no worries...you can prolly get on any freq & ask where a trafffic net is... if ya talk long enough about it, somebody will direct you or come to you :) hihi

there has been some attempt to create a 24/7 ares/nts freq, but it isn't there yet. thankfully, most of the guys on hf can help you.

the nts guys are flexible... you can take a napkin msg & somebody will convert it to radiogram for ya... or just call collect for ya...

no stress/worries :) ares/nts guys only get better when you give them YOUR stress :) hihi

now that ya mention this, seems like a nts.com website to insert traffic into the system would make sense... maybe on the arrl page... hmmm

then the reply could be emailed back to the originator... hmmm

with sample msgs to click-on... like "happy birthday" or "i'm out camping & doing fine..."

fwd'd to steve @ arrl... Mr Relay :)

thanks for the idea!

wb9ybi :)

Yes, my wording is past tense, which makes it sound like the chicks
are no longer attracted to the dudes once they get involved in NTS.
Or maybe the chicks arrived, exchanged, ah, er, hmmm, "pleasantries"
with the NTS dudes, and then left. That's what I get for trying to
think and type at 5:20 in the morning.

Anyway, you could get in touch with the guys at hamsexy.com and see
if they'll sell the t-shirts along with their Skyporn shirts and decals.

Hey, we gotta poke fun at ourselves every now and then.

Good seeing you, Ivin, Vernon, and everyone else today!

Bob...

2396. Mobile Rig wanted

Yahoo group: IndyHamRadio
Date: 2010-03-29 15:22:14 UTC
From: Brian Murrey
Topic: 2396 Message: 2396

I haven't had a mobile VHF/UHF rig in the car for a couple of decades. So I am looking for something to put in my Saturn ION3 that can be mounted in a neat fashion. I am looking for 2m/440 rig, with detachable faceplate (do they make one yet with a wireless control head...over bluetooth maybe), 30-50w output. I want to mount the radio in the trunk if possible...there is no room to mount anything in the cockpit of the ION. Not interested in APRS at all, not interested in D-Star at all, just want a dual band FM radio that I can use in the car for storm spotting, repeater kerchunking, and general drive time chatting. If it had a couple dozen memories that would be great.

Suggestions anyone?

73 de KB9BVN
Brian Murrey

BTW...packet station KB9BVN is on the air now...145.050 in beautiful and exciting New Whiteland Indiana. The mailbox is at KB9BVN-1 and if you check in, please leave me a message to let me know you were there. It's an OLD KAM TNC-2 and FT-2600 combo.

Brian, I'm partial to Kenwood mobiles, but there are other choices.

The Kenwood TM-V71A would fit your requirements. It's a true dual band radio in that both band units in the radio (Band A and Band B) can receive simultaneously. Both bands can be either VHF or UHF, so you can listen to V/U, V/V, U/U, or U/V. It has a remotable head, however since their is no speaker or mic connector on the head, those will have to be remoted, too. Power output is 5, 10, or 50 watts on either VHF or UHF. 1,000 memory channels that can be used on either Band A or Band B.

Comparable radios would be the Alinco DR-635T or Yaesu FT-8800R.

Bob...

Hey Brian,

Stuck in a box somewhere, I have a Kenwood TS-700 (I think that's the correct model.). I purchased it new a couple of months before the '710 was released. It rode around on the passenger seat of the car for about two weeks, and got stuck in the box. It may be a bit dusty --- but it's a brand new (3, 4 year old???) radio! I haven't really thought about selling it, but it certainly isn't doing me any good!

If you might be interested, perhaps we can get something together on price.

Several choices. The Kenwood series does have APRS (700/710) as does the Yaesu FTM-350R. For a basic unit, look at the Yaesu FT-8800, dual display (2/440). Friend bought one right after Dayton last year for $325, including the seperation kit. Its big brother, the FT-8900, does 2/440/6/10 for about $404 including seperation kit.

Also lots of IC-706 units out there. And Yaesu FT-100D. Both are HF/6/2/440.

Brian,

We run both the Kenwood TM-D700A & Yaesu FT-8800
rigs here. We even switched them around using as a
base and then mobile.

Really have not made up my mind yet which rig is
preferred over the other. I did note that on the Yaesu
when Monday nite nets are running on 147.03 in
Wabash & Auburn net is on 147.015 we get wiped
out a bit. We are sort of in between those repeaters
on distance.

Been a while since running packet thru the D700A but

cannot remember how we set it up as right now just

running a Alinco DR-130 on packet full time. We are

parked on 145.530 in this area of Indiana and have

the North East Indiana Packet Net (NEIPN) Sunday

eves at 9PM using simplex during net on Unproto

mode.

Am going thru my old KAM so have the KA9QWC-1

mailbox plus use the KA9LCF BBS.

DON /KA9QWC

One comment received from WB9VPG...below a
while back...

[IndyHamRadio] Re: VHF FM mobile advice
Friday, September 18, 2009 8:27 AM

Avoid Yaesu VHF/UHF mobiles at all costs. The intermod is
horrible. All the others seem to be fairly good. The wide band
receive is nice, but it adds the chances of intermod and reduces the
quality of the receiver. But every radio has it... so there's no way
to avoid that. We've had good luck with Yaesu on HF, but VHF/UHF has
been horrible. I've heard the same thing from a lot of other schools,
and a lot of other hams. If you're in the middle of nowhere, it might
be ok. But in most places, you'll have all kinds of problems.

ARRL President Kay Craigie, N3KN, signs the new Memorandum of Understandingwith the American Red Cross as American Red Cross President and CEO Gail McGovern looks on. [Michael Halston, ARC, Photo]

Craigie and McGovern shake hands after signing the new MoU. [Michael Halston, ARC, Photo]
On Thursday, March 25, ARRL President Kay Craigie, N3KN, signed a new Memorandum of Understanding (MoU) with the American Red Cross (ARC) at ARC National Headquarters in Washington, DC. The MoU, which replaces an earlier Statement of Understanding that expired in 2007, provides a "broad framework for cooperation" between the ARRL and the ARC "in preparing for and responding to disaster relief situations at all levels in rendering assistance and service to victims of disaster, as well as other services for which cooperation may be mutually beneficial."
The ARRL Board of Directors approved the signing of the MoU at its January 2010 meeting following the completion of negotiations. The Red Cross requires the completion of a criminal background check to participate in Red Cross activities and provides a process by which a volunteer may have a criminal background check performed at no cost to the volunteer. In the case of ARRL volunteers, the Red Cross has agreed to accept an alternative process: ARRL volunteers may arrange, at their own initiative and expense, to have the criminal background check performed by a state or local law enforcement agency. The Red Cross also has agreed that ARRL volunteers shall not be asked or required to consent to credit checks, mode of living investigations or investigative consumer reports in order to provide a communications function.
The ARRL and the Red Cross encourage interested volunteers in their respective organizations to become members and to participate in the activities of the other organization. ARRL volunteers should be aware that if they wish to become Red Cross volunteers, they may be required to consent to additional background checks in accordance with Red Cross policy that may include credit checks, mode of living investigations or

investigative consumer reports.
Per the MoU, "both ARRL volunteers and ARC workers will work cooperatively at the scene of a disaster and in the disaster recovery, within the scope of their respective roles and duties as recommended." During a Red Cross Disaster Relief Operation (DRO) and depending on their training and qualifications, ARRL volunteers may perform in one or more of several roles, including Amateur Radio Liaison, Communication Equipment Operator, Communication Equipment Installation/Repair and Disaster Assessment. ARRL volunteers who are assigned roles by the Red Cross during a DRO will be provided with Red Cross credentials as required by the role, consistent with Red Cross policy.
"Because of the importance of emergency communications, we are happy to be able to continue the League's long-standing relationship with the American Red Cross," said ARRL President Kay Craigie, N3KN. "The ARC and other served agencies give Amateur Radio operators the worthwhile missions in our communities that allow us to thank America for the privilege of being hams."

Date: 2010-03-31 19:19:20 UTC
From: kb9bvn
Topic: 2412 Message: 2412

Thanks everyone for the tips and knowledge transfer regarding my desire to go mobile on the VHF/UHF bands. Thanks to a certain ham KC9LGZ I will soon be in possesion of a FT 7800 that has no VHF receive. It will be my intention to open it, fix it, and use it...and if I can't do that I will wrap it in ten dollar bills and mail it off to the big Yaesu in the sky for repair.

In case you're wondering, the trip I am taking in my homebrew time machine is going well, I am rediscovering how much fun Packet Radio is and I would recommend it to all of you. There are at least 6 or 8 of us on 145.050 now, N9NDS is even running a BBS out in Cloverdale and he can handle NTS traffic. Lonnie, N9IUI-7 is a GREAT node to make your way into west central Indiana. We need to get a couple of hops in place to head down toward Mitchell so we can join up with those guys sometime.

Last night there was an impromptu "net" on 145.050 with three of us just mistyping away for about 20 minutes. It was fun. In attendance was W9ILF, W9DEW, and KB9BVN.

A quick scan of old TNC's on eBay show a half dozen on there, from $15 to $60...I bet if you ask around you can find someone that has an oldie but goodie just sitting there for free.

anyway...my PFR-3 CW rig ought to be here today, I can't wait to slap a couple hamsticks on the Saturn, right next to the 2m/440 antenna...where do I get a couple of Skywarn stickers! Can't wait to send this in to hamsexy.

2414. Re: Mobile rig solved

Yahoo group: IndyHamRadio
Date: 2010-04-01 14:31:20 UTC
From: Joe
Topic: 2412 Message: 2414

> regarding my desire to go mobile on the VHF/UHF bands.

Brian, congrats.

As you'll be wanting to program the rig's memory locations, here's
a copy of my VHF/UHF repeater spreadsheet for repeaters that one
can usually reach via somewhere long the I-465 loop.

From Park 100, I can hit most of the 2m ones with 50 watts
from a vertical antenna up 45', and the 70cm ones with 50
watts from a vertical up 30'.

There are a few more that I have scribbled on some scrap paper somewhere, but I haven't updated my electronic copy yet.

http://www.qsl.net/kc9brz/indy-repeaters-2010-03-30.xls

I used MS-Works to create that, so it may look grunged with Excel
or Open Office. But you're smart, and can figure it out.

2m repeaters are mostly dead in Indy, except for scheduled nets, and storm nets, and the IRA's 146.700. That's the only repeater with activity it seems. Some of the others occasionally have activity during drive time. But most activity, drive-time or otherwise, is on 146.700.

I occasionally get on 146.970 and call for N9ARQ (SK), just to see
if he's allowed to monitor from wherever he's at now. (And maybe
raise an eyebrow or two among the living.)

70 cm is another story. And seems to have more traffic. What used
to be on 2m is now on 70cm.

Here's a cut-paste of the spreadsheet, maybe the tabs will come
through and make it readable.

2 meter repeaters: as of Mar 30, 2010

Chan. Freq. Off PL Owner Location/notes.
1 3 145.170 - 77 Noblesville (not from car)
2 4 145.480 - W9JUQ Shelbyville, use HI power.
3 5 146.610 - 71.9 Frankfort
4 6 146.625 - IRA/W9HFQ Lugar Towers, downtown.
5 7 146.670 - W9IPL SW side Marion Cty.
6 8 146.700 - IRA 96th & Ditch. State Skywarn
7 9 146.760 - K9LPW Marion County Storm

8 10 146.820 - KA9SYP Anderson, use MID/HI pwr.
9 11 146.835 - 151.4 WA9RDF Grnwood, Franklin, MID pwr.
10 12 146.880 - 88.5 RCA 38th and Sherman.
11 13 146.970 - 107.2 ICE NW Marion Cty. PL 77 in Storm Net
12 14 147.015 + Avon, Belleville.
13 15 147.060 + K9PYI Martinsville – Wilbur
14 16 147.120 + IRA 36th & Arlington.
15 17 147.135 + 103.5 Seymour, NOT from Storehouse
16 18 147.165 + K9LMK Danville, Plainfield
17 19 147.240 + 88.5 W9KRC Kokomo.
18 20 146.730 - Muncie, NOT from Storehouse.
19 21 147.105 + 77 N9HLL Lebanon
20 22 145.210 - 100 NE9T Downtown Indy

2416. Where do you buy radio hardware doo-dads?

Yahoo group: IndyHamRadio
Date: 2010-04-03 16:47:13 UTC
From: kc9brz
Topic: 2416 Message: 2416

Where do you buy radio hardware doo-dads in Indy? Or is it better to go mail order?

Fer instance, I found some 12v (1 amp and 1.5 amp) wall-wart power supplies that I want to use on hand-held and mobile rigs indoors, but I need to rewire or adapt the dc power connectors to the right size or configuration. I need a barrel-style power connector of the right size for the hand-held, and one of those T plastic connectors (where the connector blades are at right angles to each other) for the mobile.   Where do you get those?

I found some good prices on cigarette-lighter power cords and these 12v 1.0/1.5 amp wall-warts at Recycled Computer Systems, 4327 Sellers Street, in Indy.

RCS also has good prices on various voltage wall-warts that come from recylced or obsolete computer equipment such as modems, printers, laptops, etc. from 5 volts to 24 volts.   You can even find wall-warts with AC output.

2417. Re: [IndyHamRadio] Where do you buy radio hardware doo-dads?

I try to plan ahead and pick up needed goodies at various ham fests
through out the year. This way I can help keep ham fests alive by
giving the vendors and sponsors a bit of support. If that doesn't work,
then I typically look online. Such as:

Online classifieds, like eHam.net and forsale-swap@...

Tower electronics is a good source: http://www.pl-259.com/

And, last resort, good ol' ePay, hi hi.

Good luck,

73

Good find.

Be careful. Walwarts are not regulated. The ratings you see on them are based on the load of the equipment they are powering. I have some 12vdc walwarts that actually measure 18vdc with no load...load them up too much and they can drop down to 7 or 8 volts.

Here is what I have done. I bought a few LM317 voltage regulators. These are variable VR's cabable of adjusting from 1.2vdc to 37vdc. You use a couple of resistors to set the voltage output. The ones I have are good to 1.5 amps.

See: http://www.national.com/mpf/LM/LM317.html#Overview

For details.

This VR is good for you to use with a wall wart power supply, just chop off the tip of the power supply and connect it to the VR circuit, ad a couple of resistors and on cap and you're off the races.

This site helps you to calculate the resistors you need:

http://www.electronics-lab.com/articles/LM317/

This one is good too:

http://www.whatcircuits.com/lm317-calculator-v2/

Call me if you want more input.

What about the newer laptop computer bricks that are actually small switching power supplies? Seems like a lot of the newer laptops draw 15-20 volts at fairly high currents. I have a 3-year-old Dell laptop--the power supply for it is rated at 19.5 volts at 3.3 amps.

Dan makes a good point about buying from vendors at hamfests. It keeps the industry alive.

Does MAI Parts on Michigan Road still carry electronic bits? I haven't been in there in years.

Sent: Sun, Apr 4, 2010 6:06 pm
Subject: 2010-04 Central Division Newsletter Posted

4 APR 2010

After a considerable delay (my fault), another division newsletter has
been posted at:

http://www.central.arrl.org/newsletters.html

This issue contains the following articles:

An overdue thank you to the people who have worked a long time to
regain recognition of Amateur Radio emergency communications
capabilities by the State of Illinois.

While many of you consider this to be preaching to the choir, I review
the basic rules/techniques for preventing personal identity theft when
using the Internet.

A brief note about the changing of our Central Division
Web Master.

ARRL Central Division
Director: George Isely, W9GIG
w9gig@...

Central Division News & Views

_____
Fellow ARRL Members...

I hope these electronic newsletters will be the first in long series of newsletters from your Central Division Director - long after I have departed from the scene. I plan to do about four of these a year, but this could vary depending on the amount of Central Division ham radio news that develops. The news items that appear on the ARRL website will not be mentioned here unless they are of particular interests to hams in this division. As a general rule, items reported here will be in areas of interest to all hams such as: proposed legislation that could or will affect Amateur Radio, area-wide interference and intruder problems, FCC enforcement activity within our division, large-scale public service or emergency communications activities in this region.

Keeping this criteria in mind, if you have news items that you think qualify for publication here, please mail them to me at my address listed on the Director’s Page on

this website or email me direct at: dick@... Photographs (digital- JPG format or paper) are a welcome addition to any submitted item and will enhance the probability of its publication.

Issue #21 - April, 2010
Amateur Radio Regains Illinois EMCOM Recognition

After a hiatus of many years, the State of Illinois has finally agreed to reinstate a state-wide RACES organization. Illinois SEC Brad Pioveson, W9FX; Charlie Richey K9DUE; and Jim Pitchford N9LQF; successfully concluded an agreement with the Illinois Emergency Management Agency (IEMA) this past February 9th. I take no credit for this achievement, but it has been a long-standing goal of mine to have the Indiana and Illinois ARRL Sections create the same amateur radio emergency communications organization that exists in the Wisconsin Section.

In Wisconsin, every amateur radio EMCOM operator wears both the ARES and RACES hats. This has eliminated EMCOM turf wars in Wisconsin and has led to the creation of a smooth-running state-wide amateur radio organization that has an excellent reputation for quick and efficient performance of emergency radio communications for many years. Indiana hams are already working in this direction and now Illinois hams will be able to do so. Congratulations to all who have contributed to this effort!

Personal Identity Theft
This is not an amateur radio issue, but a growing majority of amateur radio licensees are consistent computer and cellular telephone users. I include cell phones because recent generations of hand-held communication devices are really computers with cell phone functions added. Therefore, everything I say in this article also applies to cell phone use.
I'm guessing that 90 percent of the stolen identity problems are caused by ignorant, careless, or thoughtless computer and cell phone users. These users provide a fertile base for the spread of Internet SPAM and virus-infected emails. Everyone should use both an anti-virus and a fire wall program, and keep them up to date. If you receive email messages from persons or institutions you don't recognize or normally deal with,do not open (read) the message - Trash It.
The IRS, FAA, FBI, FCC, CIA, DOD, FTC, etc, and all genuine banks and financial institutions do not make inquiries, or send demands for payment or "account verification" by email. If you receive an un-requested email from a business or what looks like an official government agency, do not respond to the message - Trash It.
Electronic greeting cards are also an easy way to receive a computer virus, or at least receive more SPAM email. Usually, the notice you receive, does not announce the sender. Consider this to be a red danger flag. And some of those sites that tell you the name of the E-card sender can be spoofs of legitimate web sites. If you receive an unexpected anonymous email notice that you have an E-Card waiting for you,ignore the message - Trash It.
If you receive an email from someone you know, but the message headers look like it's multi-forwarded SPAM email, do not open the message - Trash It.
If you receive an unexpected email with an attached file from someone you know, verify its authenticity with the sender before you open it.
I have been using the Internet since 1994 and I follow the above rules. My name, callsign, address, home telephone number and email address are published in QST 12 times a year. This data is also posted on the ARRL web site and it now probably exists in over 500,000

computers world-wide. Yes, I have to filter (block) a couple hundred junk and scam email messages every day. However, my computer has never been hacked and my identity has never been stolen.

New Central Division Webmaster
After eight years of serving as the Central Division Webmaster, Clay Melhorn, N9IO, has stepped down. We all owe Clay our thanks for a job well done. I am grateful that he has always been there when I finally finished a newsletter and was anxious to get it published. Somehow with everything he does, Clay was always able to get it posted in a very short period of time. Thank you Clay!

The new Central Division Webmaster is Greg Braun, N9CHA. Greg makes his living producing video projects (advertising and training) for industry. He is very skilled with both still and video cameras and has excellent graphics layout sense. Greg, thanks for taking on this job.

Long Overdue Newsletter...
It's been almost a year since I published my last division newsletter. When I was first elected as your Central Division Director, I was concerned about sending out too much stuff. However, the only complaints I have received about this newsletter is that I don't send out enough of them. I will try to step up the frequency, but please keep in mind that I try not to duplicate any of the topics that are reported by the ARRL. When I was first elected, there was only one weekly ARRL Letter. Now there are several fine periodic electronic publications available to ARRL members.

Hamfests & Meetings
As of the publication of this newsletter, here is our ARRL travel schedule through September. It is subject to change if required ARRL meeting dates are changed or there are last minute transportation problems.
= W9GIG only * = W9XA only

April 9-10 # AES Superfest Milwaukee, WI
May 2 * Kishwaukee Hamfest Sandwich, IL
May 13-16 Dayton Hamvention Dayton, OH
June 6 SRRC Hamfest Princeton, IL
June 20 6 Meter Club Hamfest Wheaton, IL
July 9-10 Indianapolis Hamfest Indianapolis, IN
July 11 FRRL Hamfest Aurora, IL
July 14-18 ARRL Board Meeting Hartford, CT
September 10-11 W9DXCC Convention Elk Grove Village, IL
September 17-18 Peoria Superfest Peoria, IL
September 25 Radio Expo Belvidere, IL

I hope to see many of you at these hamfests. In addition to shopping for new and used equipment, they are a great way to renew and develop friendships and to meet some of the voices you have heard on your radios.

73 - George R. (Dick) Isely, W9GIG
Central Division Director

2426. April 17 swap meet in Indy

Yahoo group: IndyHamRadio
Date: 2010-04-05 12:29:06 UTC
From: Ken Bandy
Topic: 2426 Message: 2426

Don't forget the Indianapolis Radio Club's First Annual Spring "O"-Dark:30 Swap Meet (Sat..17 APR 2010..) This first event will be to open the spring season with a small swap meet located on the south side of Indy. Mark your calendars.

Date: April 17, 2010

Time: 6AM till Noon (06:00 to 12:00) "RAIN or SHINE"

Place: Northwest Corner of Southport Rd & Madison Ave. (SouthSide Indy)

Sponsors: IRC and Penske UHaul (Senior Moments Inc)

There will be complimentary coffee and donuts to start the day, and then a pitch in lunch to end the event. Should be a good time!

Ken, KJ9B
Secretary, Indianapolis Radio Club

2427. Re: Where do you buy radio hardware doo-dads?

From: Greg
Topic: 2416 Message: 2427

In Lafayette, try Lafayette Electronics on Earl Ave.
http://www.lafayetteelectronic.com/

In Indy, you have Meunier, King and MAI/Prime Parts.

Meunier
3409 E Washington ST,
317-635-3577 or 800-MEUNIER

Kings
www.kingelectronics.com
1711 Southeastern Ave
317-639-4701

MAI/Prime Parts
5736 Michigan Rd
317-257-6811

Prime Parts has a lot of different things, often at great prices. Meunier and Lafayette Electronics tend to be industrial but have access to whatever you may need.

2431. Regional Rocket launch this weekend!

Yahoo group: IndyHamRadio
Date: 2010-04-06 15:48:28 UTC
From: Greg
Topic: 2431 Message: 2431

Tripoli Indiana and the Indiana Rocketry Society are sponsoring a regional rocket launch near Battle Ground this Saturday and Sunday, from 10:00 a.m. to 5:00 p.m.

Some of the larger rockets will have 70cm beacons, and direction finding equipment will be used to locate them when they land. It's too late to coordinate with the rocketry folks to offer our help in this area, but it may turn out to be an educational experience nonetheless. I do know of a couple of hams from out of the area that will be there to foxhunt and assist in recoveries. On-site communications will be on 147.585 MHz simplex, 100.0 Hz PL (that's TAC-C for you ARES folks).

>From a non-radio perspective, it should be an interesting event, with some of the rockets expected to exceed 15,000' altitude and others to go supersonic, with one attempting to break Mach 2.0. Low, mid and high power fliers, families, and spectators are welcome to attend. Portable sanitary facilities will be provided; food and rocketry vendors will be in attendance.

For more information check out:
http://indianarocketry.com/html/calendar.html

Scroll down the page for directions and a detailed map to the launch site just north of Battleground.

Yahoo group: IndyHamRadio
Date: 2010-04-11 12:37:45 UTC
From: KB9BVN
Topic: 2435 Message: 2435

Next Saturday, April 17th, the Indianapolis Radio Club will be hosting a FREE swap meet to be held at the corner of Southport Road and Madison Ave. (NW corner)

There will be free donuts and coffee according to the flyer I picked up at the Columbus hamfest, starts at 6AM and runs until about noon. At that time there will be a pitch in lunch, so bring something to share if you plan on sticking around for lunch and what I am sure will be a great ham radio bull session.

This event is sponsored by IRC and Penske UHaul (Senior Moments Inc)

2437. 144 MHz Spring Sprint, Monday, April 12, 7 PM - 11 PM Local Time

Yahoo group: IndyHamRadio
Date: 2010-04-12 00:05:04 UTC
From: Mark Thompson
Topic: 2437 Message: 2437

2010 Spring VHF/UHF Sprints
Hosted by

John Kalenowsky, K9JK

with organizational support from

the Central States VHF Society (csvhfs.org)

It is our pleasure to announce the 2010 Spring VHF/UHF Sprints.
Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the focus of these FIVE events continues to be for single operator, single transmitter entries, both "fixed", "rover" and "Rookie".

A SIGNIFICANT change for 2010 will be the implementation of "Distance Scoring" for all 5 of the Spring Sprint Bands/events. While the details are still being worked out, this seems like a natural idea to try in these events just as the Spring Sprints were a testing ground for the implementation of Grid Square Locators as the Multipliers back in their first year, 1983.

The "Rookie" classification IS continued for 2010, to ENCOURAGE 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations which, hopefully, will 'whet' their interest in such and lead to their participation in the future. This is NOT intended to be multi-op, the "Rookie" operator is expected to be the voice behind the mic, hand on the key/keyer, hands on the keyboard, PTT, tuning knobs and rotor controls. When an experienced operator is present for a "Rookie", their role IS to be "Guidance", NOT operating. Clear identification of Rookie entrants is requested by comments in the SOAPBOX: lines for Cabrillo formatted logs or on the Summary Sheet for paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who was(were) present.

Please note that, for 2010, the shortened log submission date windows remain and consider the following change an EVEN STRONGER encouragement for electronic log submissions using the Cabrillo format. While paper logs will continue to be accepted, the policy that anyMAILED logs MUST be RECEIVED by the log deadline for each band that was started in 2009 continues, so those who submit by Mail MUST allow for the post office transit time (probably a week early to be certain, which still allows participants a full week to process logs from a 4 or 7 hour event). There have not been THAT many "paper" logs and generally, they've had smaller numbers of QSOs but I'd really appreciate if "paper" log submitters at least CONSIDER TRYING the "Web-to-Cabrillo" as described in Rule 7.2.2. If you MUST mail your entry, DO NOTE the log submission MAIL address in 7.3.2.

A summary sheet which includes your total contacts, multipliers and calculated score WILL BE required with Paper Logs (see sample at:
http://springsprints.googlegroups.com/web/vhfsprintsummary.pdf). Such summary info is not required for electronic logs but may be included in the SOAPBOX: area of the Cabrillo formatted log if participants so desire. Be sure to include the grid square you operated

from in either your log or summary sheet.

SPONSORS?? This is still the 2009 info...I'm slowly getting going for 2010 sponsors and will be contacting past sponsors shortly. Most of the 2008 Sponsors have renewed their sponsorship for 2009 and I've FINALLY (as of May 4th), created/updated the 2009 Sponsorship page which can be viewed by clicking here. If interested in becoming a prize sponsor or sponsoring a plaque for the events in 2009 (or in the future), please email me at:springvhfuhfsprints@...

** Log submissions for 2010 (once the events start) may be viewed here. **

** Awards for 2007 through 2009 may be viewed here. The complete scores databases for 2007 through 2009 can be viewedhere.

Wishing you the very best of VHF! 73,

John Kalenowsky, K9JK

---

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.

2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 12, 2010.
2.2. - 222 MHz
The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 20, 2010.2.3. - 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 28, 2010.
2.4. - Microwave (902+)
The Microwave Sprt will be on Saturday, May 1, 2010, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 8, until 0300Z Sunday, May 9, 2010.

3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator (and call signs) is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.

What's that, you say you have no clue what your SIX-Character Grid Locator is?

To assist you with that, AFTER reading the instructions that follow, please click here.

The click above will take you to a Google Map showing the borders of the 20-degree by 10-degree "MAJOR Grid" of "EM" as well as parts around it. IF you know your FOUR-character Grid Locator (also known as "MINOR Grid"), you can enter it in an entry box at the bottom of the page, which may get you closer to where you want to be looking. In any case, you can then navigate as well as Zoom in and out using the controls at the upper left of the screen.

When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator (also known as "sub-grid") for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. If there is good aerial photo coverage in your neighborhood, you might even be able to find your house!

This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, I think you'll like it!

4. Scoring:
STILL WORKING OUT THE DETAILS.

Scoring will be distance based, 1 point per kilometer, for 2010.

It would certainly make things easier if EVERYONE knew, exchanged and logged SIX-Character locators but it is likely more certain that there will be participants that only know their FOUR-character locator. In such a case, RECORD what the other station actually SENDS as their Grid Locator even if JUST the FOUR characters. DO NOT use "look up" systems in logging programs, such as Ham Radio Deluxe has or can be done with Super Check Partial files...RECORD what the other station sends (it IS okay if what your lookup 'matches' what they sent but be sure to CHANGE it if they send something different).

I am not aware of MANY Logging Programs that have this scoring capability but the KEY item needed is that the program CAN record SIX-character Grid Exchanges and produce a proper CABRILLO formatted log file.

Rovers can be worked again as they enter a different "Grid Square" (Grid-4) but it is hoped that Rovers will have capability to know their SIX Character SUB-grid locator and give that as their report. "Dupes" will be allowed with Rovers (from different sub-grids in the same Grid-4 locator) but only the LONGEST single path length will be counted for a given Grid-4.

5. Reporting: Electronic Logs (Cabrillo format ONLY) must be received via e-mail or paper logs WITH summary sheet RECEIVED via Mail no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 27, 2010
5.2. - 222 MHz - May 5, 2010
5.3. - 432 MHz - May 13, 2010
5.4. - Microwave (902+) - May 17, 2010
5.5. - 50 MHz - May 25, 2010

6. Awards:
6.1. Certificates/Plaques (if sponsored) will be awarded as follows:
6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If a plaque is not sponsored for a particular finish above, a certificate (similar to what other VHF Contest sponsors provide) will be sent. "Specialty" plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can

provide a clear criteria). Please contact John regarding that. To view what plaques have been sponsored (and criteria) for 2010, click here
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received." To view what prizes have been sponsored (and criteria) for 2010, click here

7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint host(s), sponsor(s) and scoring team.

7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following text for the "CONTEST:" line in the header of the Cabrillo Log file:
For 144 MHz, use CONTEST: VHF-SPRINT-144MHZ-SPRING
>For 222 MHz, use CONTEST: VHF-SPRINT-222MHZ-SPRING
>For 432 MHz, use CONTEST: VHF-SPRINT-432MHZ-SPRING
>For "Microwave" (902 MHz & Up), use CONTEST: VHF-SPRINT-MICROWAVE-SPRING
>For 50 MHz, use CONTEST: VHF-SPRINT-50MHZ-SPRING7.2.1.2. Until logging programs with 'official' support for these events become available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square exchanges). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score is pretty much "guaranteed" to be incorrect since scoring is now based on distances as opposed to the "traditional" QSOs time Multipliers but the QSO data should be correct.
7.2.1.3. E-mail logs to: springsprintlogs@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (WA2FGK 144 -or- K3TUF MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W9GKA.LOG)

7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. MANY THANKS to Bruce!

7.3. Paper logs:
7.3.1. Paper logs must include a Summary sheet and the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3, 3.4, etc.)
>Mode (e.g. CW, PH, FM, RY)
>Date/Time (UTC Date and Time are strongly preferred but "local" are acceptable and it is usually apparent which was used when logs are received)
>Callsign SENT (can be listed at the top of a page OR on each line)
>Grid Locator SENT (PLEASE give your SIX-character locator when known AND send it as your exchange)

>Other Station's Callsign
>Other Station's Grid
> Locator (PLEASE ask for and record SIX-character when the other station provides it BUT, if the other station only reports FOUR-character, record the 4 characters)7.3.2. "Snail Mail" paper logs to:

What's with the ham tradition of starting so darn early?
I'd have to take a 3 hour afternoon nap in order to compensate for getting up that early?

I'll be there about 7AM...I have some stuff to try and sell, including a pile of 250 GB SATA drives (CHEAP).

Then I have to go home and take a nap because the final bout of the 2010 Naptown Roller Girls season is that evening at the Fairgrounds Coliseum. I do not want to miss that. I happen to have an extra ticket if you would like to go.

Next Saturday, April 17th, the Indianapolis Radio Club will be hosting a
FREE swap meet to be held at the corner of Southport Road and Madison Ave.
(NW corner)

There will be free donuts and coffee according to the flyer I picked up at
the Columbus hamfest, starts at 6AM and runs until about noon. At that time
there will be a pitch in lunch, so bring something to share if you plan on
sticking around for lunch and what I am sure will be a great ham radio bull
session.

This event is sponsored by IRC and Penske UHaul (Senior Moments Inc)

The quote often attributed to Ernest Hemingway is:

"Mountain climbing, bull fighting, and motor racing are the only true sports. The rest are merely games."

The implication here is that if you can get killed doing it, it must be a sport. Since Hemingway's day, motor racing has gotten much safer, so it may not be long for that list. Bull fighting has changed over the years, too.

I think I'm going to pass on this swap meet and drive up to Peru for the North Central Indiana Hamfest on Sunday. It's similar to Columbus and I have found some bargains there in the past. I also some personal business to attend to up that-aways, so I can kill two birds with one stone.

2010 Spring VHF/UHF Sprints
Hosted by

John Kalenowsky, K9JK

with organizational support from

the Central States VHF Society (csvhfs.org)

It is our pleasure to announce the 2010 Spring VHF/UHF Sprints.
Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the focus of these FIVE events continues to be for single operator, single transmitter entries, both "fixed", "rover" and "Rookie".

A SIGNIFICANT change for 2010 will be the implementation of "Distance Scoring" for all 5 of the Spring Sprint Bands/events. While the details are still being worked out, this seems like a natural idea to try in these events just as the Spring Sprints were a testing ground for the implementation of Grid Square Locators as the Multipliers back in their first year, 1983.

The "Rookie" classification IS continued for 2010, to ENCOURAGE 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations which, hopefully, will 'whet' their interest in such and lead to their participation in the future. This is NOT intended to be multi-op, the "Rookie" operator is expected to be the voice behind the mic, hand on the key/keyer, hands on the keyboard, PTT, tuning knobs and rotor controls. When an experienced operator is present for a "Rookie", their role IS to be "Guidance", NOT operating. Clear identification of Rookie entrants is requested by comments in the SOAPBOX: lines for Cabrillo formatted logs or on the Summary Sheet for paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who was(were) present.

Please note that, for 2010, the shortened log submission date windows remain and consider the following change an EVEN STRONGER encouragement for electronic log submissions using the Cabrillo format. While paper logs will continue to be accepted, the policy that anyMAILED logs MUST be RECEIVED by the log deadline for each band that was started in 2009 continues, so those who submit by Mail MUST allow for the post office transit time (probably a week early to be certain, which still allows participants a full week to process logs from a 4 or 7 hour event). There have not been THAT many "paper" logs and generally, they've had smaller numbers of QSOs but I'd really appreciate if "paper" log submitters at least CONSIDER TRYING the "Web-to-Cabrillo" as described in Rule 7.2.2. If you MUST mail your entry, DO NOTE the log submission MAIL address in 7.3.2.

A summary sheet which includes your total contacts, multipliers and calculated score WILL BE required with Paper Logs (see sample at:
http://springsprints.googlegroups.com/web/vhfsprintsummary.pdf). Such summary info is not required for electronic logs but may be included in the SOAPBOX: area of the Cabrillo formatted log if participants so desire. Be sure to include the grid square you operated

from in either your log or summary sheet.

SPONSORS?? This is still the 2009 info...I'm slowly getting going for 2010 sponsors and will be contacting past sponsors shortly. Most of the 2008 Sponsors have renewed their sponsorship for 2009 and I've FINALLY (as of May 4th), created/updated the 2009 Sponsorship page which can be viewed by clicking here. If interested in becoming a prize sponsor or sponsoring a plaque for the events in 2009 (or in the future), please email me at:springvhfuhfsprints@...

** Log submissions for 2010 (once the events start) may be viewed here. **

** Awards for 2007 through 2009 may be viewed here. The complete scores databases for 2007 through 2009 can be viewedhere.

Wishing you the very best of VHF! 73,

John Kalenowsky, K9JK

---

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.

2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 12, 2010.
2.2. - 222 MHz
The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 20, 2010.2.3. - 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 28, 2010.
2.4. - Microwave (902+)
The Microwave Sprt will be on Saturday, May 1, 2010, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 8, until 0300Z Sunday, May 9, 2010.

3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator (and call signs) is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.

What's that, you say you have no clue what your SIX-Character Grid Locator is?

To assist you with that, AFTER reading the instructions that follow, please click here.

The click above will take you to a Google Map showing the borders of the 20-degree by 10-degree "MAJOR Grid" of "EM" as well as parts around it. IF you know your FOUR-character Grid Locator (also known as "MINOR Grid"), you can enter it in an entry box at the bottom of the page, which may get you closer to where you want to be looking. In any case, you can then navigate as well as Zoom in and out using the controls at the upper left of the screen.

When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator (also known as "sub-grid") for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. If there is good aerial photo coverage in your neighborhood, you might even be able to find your house!

This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, I think you'll like it!

4. Scoring:
STILL WORKING OUT THE DETAILS.

Scoring will be distance based, 1 point per kilometer, for 2010.

It would certainly make things easier if EVERYONE knew, exchanged and logged SIX-Character locators but it is likely more certain that there will be participants that only know their FOUR-character locator. In such a case, RECORD what the other station actually SENDS as their Grid Locator even if JUST the FOUR characters. DO NOT use "look up" systems in logging programs, such as Ham Radio Deluxe has or can be done with Super Check Partial files...RECORD what the other station sends (it IS okay if what your lookup 'matches' what they sent but be sure to CHANGE it if they send something different).

I am not aware of MANY Logging Programs that have this scoring capability but the KEY item needed is that the program CAN record SIX-character Grid Exchanges and produce a proper CABRILLO formatted log file.

Rovers can be worked again as they enter a different "Grid Square" (Grid-4) but it is hoped that Rovers will have capability to know their SIX Character SUB-grid locator and give that as their report. "Dupes" will be allowed with Rovers (from different sub-grids in the same Grid-4 locator) but only the LONGEST single path length will be counted for a given Grid-4.

5. Reporting: Electronic Logs (Cabrillo format ONLY) must be received via e-mail or paper logs WITH summary sheet RECEIVED via Mail no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 27, 2010
5.2. - 222 MHz - May 5, 2010
5.3. - 432 MHz - May 13, 2010
5.4. - Microwave (902+) - May 17, 2010
5.5. - 50 MHz - May 25, 2010

6. Awards:
6.1. Certificates/Plaques (if sponsored) will be awarded as follows:
6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If a plaque is not sponsored for a particular finish above, a certificate (similar to what other VHF Contest sponsors provide) will be sent. "Specialty" plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can

provide a clear criteria). Please contact John regarding that. To view what plaques have been sponsored (and criteria) for 2010, click here
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received." To view what prizes have been sponsored (and criteria) for 2010, click here

7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint host(s), sponsor(s) and scoring team.

7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following text for the "CONTEST:" line in the header of the Cabrillo Log file:
For 144 MHz, use CONTEST: VHF-SPRINT-144MHZ-SPRING
>For 222 MHz, use CONTEST: VHF-SPRINT-222MHZ-SPRING
>For 432 MHz, use CONTEST: VHF-SPRINT-432MHZ-SPRING
>For "Microwave" (902 MHz & Up), use CONTEST: VHF-SPRINT-MICROWAVE-SPRING
>For 50 MHz, use CONTEST: VHF-SPRINT-50MHZ-SPRING7.2.1.2. Until logging programs with 'official' support for these events become available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square exchanges). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score is pretty much "guaranteed" to be incorrect since scoring is now based on distances as opposed to the "traditional" QSOs time Multipliers but the QSO data should be correct.
7.2.1.3. E-mail logs to: springsprintlogs@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (WA2FGK 144 -or- K3TUF MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W9GKA.LOG)

7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. MANY THANKS to Bruce!

7.3. Paper logs:
7.3.1. Paper logs must include a Summary sheet and the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3, 3.4, etc.)

2448. 432 MHz Spring Sprint, Wed, Apr 28, 7 - 11 PM Local

Yahoo group: IndyHamRadio
Date: 2010-04-28 16:02:23 UTC
From: kc9brz
Topic: 2448 Message: 2448

Around E.146th st and SR-37 in Fishers (almost Noblesville) is the corner of 4 grid squares:

EN60, EN70,
EM69, EM79,

I wish I had a 440 radio to play with.

(Hey, wait a second. Didn't I play this game with calibers
back when I was into target shooting? You see some spent brass
at the range, pick it up; then when you have enough brass you
"justify" buying some reloading dies and bullets for it; then when
you have enough ammo, you "justify" buying a gun in that caliber.
"Oh cool! Look at all that brass! I need a new gun!" has turned into
"Oh cool! Look at that contest! I need a new radio! And "Hey, let's
try out that range I haven't been to" turns into "Hey, I haven't
been to that country/grid-square.)

Anyone else know what I'm talking about?

==========

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.

- 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 28, 2010.

Have been there many times as a Rover in the VHF contest over the
years. There are several accessible parking lots in the area to operate
from. A bit of an elevated noise level on 6 & 2 meters, but 432/440
shouldn't be any problem.

I will not be on for the sprints, but I may be back up there for the
June VHF contest.

Good luck,

73

From: Zack Widup
Topic: 2448 Message: 2450

The Spring Sprints this year are using distance-based scoring as a trial. The exchange is your 6-character grid (e.g. EN50vc). Your score is simply the sum of all the distances to each other station you worked based on the 6-character grids of both stations. There are no multipliers in this contest.

The only time the actual grid is significant other than for distance scoring is when you work a Rover. You can work a Rover more than once when he is in the same 4-character grid but only the farthest QSO with that Rover in that grid will be counted. You can re-work a Rover when he is in another 4-character grid.

2451. Change in plans for K9ZF /P in the INQP Saturday

Yahoo group: IndyHamRadio
Date: 2010-04-28 16:35:09 UTC
From: Dan Evans
Topic: 2451 Message: 2451

Unfortunately, I'm going to have to scale back my plans for the Indiana QSO party this Saturday.

I've been battling a nasty sinus infection all week, and it has left with very little energy to work on contest preps. Along with this, the National Weather Service is giving a high chance of severe thunderstorms all this weekend. So.... I'm going to scrap my camping trip plans to the hill top on the Washington / Scott county line. I really don't want to be in the tent, on the hilltop, in a thunderstorm. I'm not afraid of a little rain, but my tent doesn't handle wind very well. Not to mention lightning will be likely....

Anyway, I have this year's wire antenna made and strung up in the back yard for testing so I'll likely move my portable expedition to the back yard this year. [I don't have any permanent HF antennas at home, at the moment.]

So, scaling back but, look for K9ZF portable in Clark county this year!

"You can re-work a Rover when he is in another 4-character grid."

Yeah. That's why I pointed out that E. 146th and SR-37 is a conveniently located (to Indy) corner of four 4-character grids.
With easy street/highway access to move quickly between them.

Hence, a rover based in the Indianapolis area wouldn't have to move very far to cover four 4-character grids, for the purpose of his own
points or for the purpose of helping his non-roving ham-buddies get points by talking to rovers in different 4-character grids.

This being the "Indy" Ham Radio Yahoo Group, I thought I'd be
"Mr. Helpful" and point out the closest such "4-character grid corner" to the I-465 loop.

Subject: [IndyHamRadio] 432 MHz Spring Sprint, Wed, Apr 28, 7 - 11 PM Local

Around E.146th st and SR-37 in Fishers (almost Noblesville) is the corner of 4 grid squares:

EN60, EN70,
EM69, EM79,

I wish I had a 440 radio to play with.

(Hey, wait a second. Didn't I play this game with calibers
back when I was into target shooting? You see some spent brass
at the range, pick it up; then when you have enough brass you
"justify" buying some reloading dies and bullets for it; then when
you have enough ammo, you "justify" buying a gun in that caliber.
"Oh cool! Look at all that brass! I need a new gun!" has turned into
"Oh cool! Look at that contest! I need a new radio! And "Hey, let's
try out that range I haven't been to" turns into "Hey, I haven't
been to that country/grid-square.)

Anyone else know what I'm talking about?

==========

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.

- 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 28, 2010.

2454. Electronics Job listing

Yahoo group: IndyHamRadio
Date: 2010-04-29 03:03:01 UTC
From: w9dew
Topic: 2454 Message: 2454

There is a job opening at the Inergrated Public Safety Commission (IPSC)
SAFE-T. It closes May 11. Details below.

73,

Don, W9DEW

INDIANA INTEGRATED PUBLIC SAFETY COMMISSION

Telecommunications Technician 4

HOW TO APPLY

To apply for this opportunity, visit our job bank at www.in.gov/spd.
From this page, click `Employment Opportunities' in the menu to
the left of the screen, and then click `Apply Now'. Please
reference job opening ID 567948 using the Advanced Search link.

JOB DESCRIPTION

The Integrated Public Safety Commission is currently searching for a
Telecommunications Technician whose primary responsibility is to
maintain, direct and coordinate the maintenance of all communications
systems and equipment, in assigned areas.

This position is primarily located in Northern Indiana and requires the
successful candidate to respond to after-hours call outs for emergency
repairs and services.

Responsibilities not limited to the following: ☐ Install, maintain
and repair all communications and microwave equipment in the area of
assignment. ☐ Complete equipment maintenance records required by the
Federal Communications Commission (FCC), and update computer-generated
data as needed. ☐ Diagnose problems of a variety of radio systems
and equipment, including mobile and base station radio systems, portable
radios, trunking systems, microwave systems, telephone switching systems
and logging recorders, making the appropriate repairs or replacements.
☐ Perform preventative maintenance measures and testing procedures
to ensure uninterrupted operation of the microwave, base
station/console, trunking, and telephone systems within area of
assignment. ☐ Assist in the design, configuration and implementation
of telecommunications systems, networks, and structured cabling
including but not limited to multi-layer switches/routers, VPN
appliances, intrusion detectors, fire walls, extranet, distributor
sniffers, PBX and KEY telephone systems or equipment or any other new
technology. ☐ Provide support for Local Area Networks (LAN), Wide
Area Networks (WAN) and Dial-up Networks. ☐ Research, develop and

initiate standardized testing procedures to ensure uninterrupted operation of the Integrated Public Safety Commission Communications System and provide adequate telecommunication services to the department. ☐ Monitor and inspect generator, tower lighting control, and tower grounding, guy wire systems, and general building and grounds condition. Report any discrepancies to supervisor, or engineering personnel for prompt corrective action.

QUALIFICATIONS

Must possess an F. C. C. General Class Radiotelephone License or an acceptable equivalent certification with ability to apply technical standards, assure compliance with FCC Rules and Regulations. ☐ Must possess a Technical Diploma in Electronics from an accredited Technical School or College, or acceptable skills, knowledge and ability in communications and electronics -- high school diploma or GED required. ☐ Must have a basic understanding of computer operation and terminology. Ability to work with programming software, computer spreadsheets, databases, programming and retrieval of information using various specialized software.

☐ Comprehensive knowledge of the telecommunications field in general. ☐ Must have a valid Indiana driver's license. ☐ Ability to respond to after-hours call outs for emergency repairs and services. ☐ Working knowledge of the hazards involved with high voltage electronics equipment and applicable safety procedures. ☐ Ability to climb ladders and gain access to equipment cabling. ☐ Working knowledge of telecommunications architecture, network design, traffic engineering, local area network architecture and mainframe terminal access methods. ☐ Working knowledge of communications systems and equipment used to network mainframe and telephone systems. ☐ Working knowledge of radios, data devices and structure cabling systems. ☐ Must be able to read and comprehend technical manuals, read and interpret schematic diagrams. ☐ Must be able to communicate with people within the department as well as outside vendors, and technical support services. Skills must encompass written and verbal communication forms.

ADDITIONAL COMMENTS

Physical Requirements: ☐ Must be able to lift, move and install equipment weighing up to 50 pounds. ☐ Exposed to microwave radiation, noise, battery acid, and hazardous fumes from soldering, exhaust, solvents and chemicals. Work also involves frequent contact with high voltage AC wiring and breaker boxes. ☐ Work regularly involves standing, kneeling, and some climbing and requires high level of manual dexterity when performing electronic repair. ☐ Must possess good vision, hearing and color perception necessary to work with various types of equipment and tiny color coded components. ☐ Emergency situations sometimes require long hours with no immediate

assistance to effect repairs

The State of Indiana offers a comprehensive benefit package which includes medical, dental, vision, life insurance, retirement plans and accrued leave. The State of Indiana is an Equal Opportunity Employer.

2455. Hamvention D-STAR Activities

Yahoo group: IndyHamRadio
Date: 2010-04-29 22:24:24 UTC
From: Mark Thompson
Topic: 2455 Message: 2455

D-STAR at Dayton Hamvention

During the Hamvention several D-STAR events & resources will be available.

D-STAR Digital Voice repeaters in Dayton are sponsored by DARA (Dayton Amateur Radio Association), the host of the Hamvention.

Dayton D-STAR Repeaters

147.105 (+600 KHz) W8BI C
Accessible outdoors at Hamvention® HARA Arena with a handheld at 0.5 watts may be marginal so higher power is recommended.

444.0875 (+ 5MHz) W8BI B
70 cm repeater may be operational by time of the Hamvention®.

Dayton D-STAR Repeater Reflector Linking
Hamvention received approval from the D-STAR Reflector REF030B to link a W8BI D-STAR over the Hamvention® weekend.
The repeater was linked last year as well using a different reflector. A reflector allows all repeaters & DV Dongles linked to it communicate as a group.
D-STAR activity in Dayton over Hamvention® weekend can be followed by using a repeater or DV Dongle linked to the 30-B reflector
instead of linking directly to the W8BI gateway.

Hamvention D-STAR Repeaters
At the Hamvention Icom has D-STAR digital voice 2m, 70cm & 23cm digital voice repeaters & radios on demonstration and
the repeaters may be connected to the D-STAR network. The callsigns & frequencies of the demonstration repeaters will be available at the Hamvention.

Thursday Night D-STAR Meet, Greet and Eyeball QSO
On Thursday night prior to the Hamvention there is a D-STAR Meet, Greet and Eyeball QSO over dinner.
It will occur on Thursday May 13th from 7 p.m. – 9 p.m at Marion 's Piaza on 1320 N Fairfield Road in Beavercreek , OH .
More information about the event at: http://hamvention.org/events.php#dstar

D-STAR Friday Night Get Together
For the last four years there has been a Friday Night D-STAR Get Together at a hotel in Dayton hosted by the Texas & Alabama D-STAR groups.
The event has been an opportunity to hear talks by experienced D-STAR repeater operators & innovators and meet with other D-STAR users.
This year the Friday Night D-STAR Get Together will be on Friday, May 14th from 8 – 10 pm at the Drury Inn North, the same location as last year.
The Georgia D-STAR group will host this year's event. The format this year will be a bit different from previous years

with a few short presentations to start the evening followed by an open session with D-STAR experts on many topics stationed
around the room to meet and answer your questions.

D-STAR Forum, Room #1, Friday, 12:45 – 14:15 pmHosted by Greg Sarratt, W4OZK

Speakers
DVAP/DV Dongle/D-PLUS/Multiple Software Packages, Robin Cutshaw, AA4RC
Home-brew D-STAR repeater, David Lake, G4ULF
D-RATS, D-STAR Digital Data Software, Dan Smith, KK7DS

2456. APRS in Indianapolis northern suburbs

Yahoo group: IndyHamRadio
Date: 2010-04-30 13:48:51 UTC
From: JeffHBurns
Topic: 2456 Message: 2456

I would like to know how well a small APRS radio like the Yaesu VX-8DR will reach digipeaters in the northern suburbs of Indianapolis. I live near 146th and Spring Mill, and like to ride my bicycle all over the area. Having an APRS signal make it into the Internet system would be a great safety measure.

I have been watching the APRS activity on-line for a few days, and have only seen tracks on the major highways. This does not give me enough information to know if it is worth pursuing a low power tracker. To be useful I would like it to work in an area bounded by I-69, I-65, and SR32. If it worked as far north as SR36 and SR47 that would be better.

By the way I moved to Carmel from Kokomo a year ago. I was active on the air and in the local radio club before moving, but have not had much time for radio since moving. Hopefully this will change this year.

If you've been watching the activity, then you know where the digis
are. N9AMN-3, which is located near 82nd and Shadeland, is probably
the closest to your location.

I don't know whether or not your bicycle mobile will be heard by any
of the digis. You are correct that most of the mobile APRS activity
around here is motor vehicles with the occasional airplane.

2458. I will work the IN QSO party, May 1st, 2010

Yahoo group: IndyHamRadio
Date: 2010-04-30 21:26:55 UTC
From: kc9brz
Topic: 2458 Message: 2458

I plan on being on the air for some of the day (off and on
from Noon to 9:00pm) for the Indiana QSO party, May 1, 2010.

I'll be using a base station, up to 100 watts, but can dial
it down for QRP. Available bands to me: 80, 40, 20, 15 and 10.

Antenna: rotatable 3 element beam, 45' up, for 10/20.
Inverted V antenna for 75/80 meter, 45' up.

I can copy and transmit CW, at up to 10 wpm, if anyone wants
that QSO option.

My purpose is not for my own points, but to offer contacts
for those wanting a QSO with Marion County and/or Grid EM69.
(EM69vv to be precise.) This is mainly for me to practice
and see how contests work.

I'm also a member of Fists, #9455.

If anyone wants to contact me off-air to schedule a QSO,
I'll listen to an Echolink repeater, 146.880, Node 6522.
Plus, I'll be on YAHOO CHAT as "KC9BRZ".

-Dave A., kc9brz.

2459. QSO Party

At the two hour mark I have a whopping 16 contacts and 12 multipliers, with only a single Indiana station in the log. Managed to get K9NN in the log as my first contact on 20m. Yikes.

The 7 Land contest is in full bloom, and I have UT, AZ, NV, WA, and OR in the log on 15m and 20m...not bad since I'm QRP CW at 5w to an attic dipole. The bands seem to be opening and closing...like QSB in very slow motion.

Time for a break, I'll hit it again in a couple of hours.

I was working 20 SSB when the door bell rang. Despite my pee-poor antenna, I logged stations in AZ, OR, UT, and WA. And two contacts in Marion County, Indiana. Now, I have to go run some errands. So much for my INQP efforts.

I just shut down the station, and I am headed for bed. It's been a long day. I did manage to participate in the QSO party and had a great time. The highlight was working a German station on 40m with my 5w Elecraft K2 and my (shudder) attic dipole. I ended up with 83 QRP CW contacts, 44 multipliers, and 7304 points. It's not record shattering effort, but it was a great way to spend part of this rainy nasty day.

Anyway, if you managed to pull my peanut whistle signal out, and actually copy my gnarley fist, I thank you. Trust me, with the awesome receiver in the K2, I know YOU did most of the work. For that I am thankful.

Topic: 2459 Message: 2462

> only a single Indiana station in the log. Managed to get K9NN
> in the log as my first contact on 20m. Yikes.

We must have crossed paths. I was on 40 meter CW for just
a little bit, at 7.030. I think the other guys claimed me, but
I couldn't claim them as a QSO since I couldn't copy their
QTH and couldn't even get one guy's call sign, they were so fast.

Though I had 21 good phone QSO's, it pretty much sounded like
all chaos and confusion to me. I'll have to sit in with
an experienced ham some day to get some elmering to get it
all figgered out.

Everyone was polite with my crude attempt at my 1st contest,
but one guy was a little miffed as he attempted to teach me
some protocol, which went over my head anyway.

I got K9NN too. And W9TE/90 who plowed through the pile-up with
Germanic precision.

I learned:

a) to get the contest center frequencies for the various
bands programmed into memories before the contest starts.

b) to write down the tuner settings for those frequencies
before the contest starts.

c) I need logging software to be able to do more than 1 QSO per 2 minutes.

d) A logger that includes software control of the rig would be even better.

e) an automatic tuner would be even even better.

f) an amplifier lets you play "big dog".

g) most interesting/weird contact: callsign NU9DE. I learned the
hard way NOT to google his call sign from someone else's computer.
(Um, take out the "9", if you don't see why.)

h) I must have been doing something wrong on CW. I had a problem
finding contesters. One non-contester I just stumbled on, and the other I stalked down
after hearing him QSY from the voice band.

By the time 20 meters got going later in the afternoon, I was
having brain fade, and couldn't stay focused.

I had 9 75-meter QSO's, 11 40-meter QSO's, and 1 20-meter.

2463. Force 12 C-3SS HF Beam for Sale

I have a Force 12 C-3SS HF beam for sale. I bought the antenna used, but have never put it up in the air.

The C-3SS is a 20m, 15m, & 10m tri-bander, but also covers 17m & 12m with the use of a tuner. The longest element is 24-ft long & the beam has a turning radius of 14-ft. For a full description & specifications go to:

http://force12inc.com/1252/1462.html

I am asking $550 (price new is $1080.00). I will deliver to any location within a 2-3 hour drive from Terre Haute, IN.

Nice antenna. I have the C-3S

Works very well on 12 and 17m.

No traps, full wave elements on 10, 15, 20.

Seems to have very low wind drag. Held up through a bad ice storm.

Light weight, I think I remember pulling it up with a rope.

It has a quick connect/disconnect boom to mast assemby. No U-bolts.

One of my better investments in ham radio.

2010 Spring VHF/UHF Sprints
Hosted by

John Kalenowsky, K9JK

with organizational support from

the Central States VHF Society (csvhfs.org)

It is our pleasure to announce the 2010 Spring VHF/UHF Sprints.
Everyone is encouraged to participate, even if only in a small way. The rules have intentionally remained simple, and the focus of these FIVE events continues to be for single operator, single transmitter entries, both "fixed", "rover" and "Rookie".

A SIGNIFICANT change for 2010 will be the implementation of "Distance Scoring" for all 5 of the Spring Sprint Bands/events. While the details are still being worked out, this seems like a natural idea to try in these events just as the Spring Sprints were a testing ground for the implementation of Grid Square Locators as the Multipliers back in their first year, 1983.

The "Rookie" classification IS continued for 2010, to ENCOURAGE 'first-time' participants, from their own stations OR as "guest-op" at an "experienced" station to introduce newcomers to weak signal vhf/uhf operations which, hopefully, will 'whet' their interest in such and lead to their participation in the future. This is NOT intended to be multi-op, the "Rookie" operator is expected to be the voice behind the mic, hand on the key/keyer, hands on the keyboard, PTT, tuning knobs and rotor controls. When an experienced operator is present for a "Rookie", their role IS to be "Guidance", NOT operating. Clear identification of Rookie entrants is requested by comments in the SOAPBOX: lines for Cabrillo formatted logs or on the Summary Sheet for paper logs. The detail should identify who is the "Rookie" and list any "experienced" operator(s) who was(were) present.

Please note that, for 2010, the shortened log submission date windows remain and consider the following change an EVEN STRONGER encouragement for electronic log submissions using the Cabrillo format. While paper logs will continue to be accepted, the policy that anyMAILED logs MUST be RECEIVED by the log deadline for each band that was started in 2009 continues, so those who submit by Mail MUST allow for the post office transit time (probably a week early to be certain, which still allows participants a full week to process logs from a 4 or 7 hour event). There have not been THAT many "paper" logs and generally, they've had smaller numbers of QSOs but I'd really appreciate if "paper" log submitters at least CONSIDER TRYING the "Web-to-Cabrillo" as described in Rule 7.2.2. If you MUST mail your entry, DO NOTE the log submission MAIL address in 7.3.2.

A summary sheet which includes your total contacts, multipliers and calculated score WILL BE required with Paper Logs (see sample at:
http://springsprints.googlegroups.com/web/vhfsprintsummary.pdf). Such summary info is not

required for electronic logs but may be included in the SOAPBOX: area of the Cabrillo formatted log if participants so desire. Be sure to include the grid square you operated from in either your log or summary sheet.

SPONSORS?? This is still the 2009 info...I'm slowly getting going for 2010 sponsors and will be contacting past sponsors shortly. Most of the 2008 Sponsors have renewed their sponsorship for 2009 and I've FINALLY (as of May 4th), created/updated the 2009 Sponsorship page which can be viewed by clicking here. If interested in becoming a prize sponsor or sponsoring a plaque for the events in 2009 (or in the future), please email me at:springvhfuhfsprints@...

** Log submissions for 2010 (once the events start) may be viewed here. **

** Awards for 2007 through 2009 may be viewed here. The complete scores databases for 2007 through 2009 can be viewedhere.

Wishing you the very best of VHF! 73,

John Kalenowsky, K9JK

---

1. Object: To work as many amateur stations in as many 2 degree by 1 degree grid squares as possible, using authorized amateur frequencies on the 50, 144, 222, 432, 902 MHz and above bands.

2. Contest Period:
2.1. - 144 MHz
The 144 MHz Sprint will be from 7 PM until 11 PM local time on Monday, April 12, 2010.
2.2. - 222 MHz
The 222 MHz Sprint will be from 7 PM until 11 PM local time on Tuesday, April 20, 2010.2.3. - 432 MHz
The 432 MHz Sprint will be from 7 PM until 11 PM local time on Wednesday, April 28, 2010.
2.4. - Microwave (902+)
The Microwave Sprt will be on Saturday, May 1, 2010, from 6 AM until 1 PM local time. This includes all Amateur frequencies above 902 MHz. Please include band data in summaries and logs. NOTE: use of Liaison Frequency is encouraged.2.5. - 50 MHz
The 50 MHz Sprint will be from 2300Z Saturday, May 8, until 0300Z Sunday, May 9, 2010.

3. Exchange: Grid-square locator - PLEASE EXCHANGE and LOG SIX-Character Grid Locators where possible. Correct exchange of FOUR-Character Grid Locator (and call signs) is the minimum requirement for a valid contact but we'd REALLY like to see SIX-Character locators exchanged and recorded in the submitted logs.

What's that, you say you have no clue what your SIX-Character Grid Locator is?

To assist you with that, AFTER reading the instructions that follow, please click here.

The click above will take you to a Google Map showing the borders of the 20-degree by 10-degree "MAJOR Grid" of "EM" as well as parts around it. IF you know your FOUR-character Grid Locator (also known as "MINOR Grid"), you can enter it in an entry box at the bottom of the page, which may get you closer to where you want to be looking. In any case, you can then navigate as well as Zoom in and out using the controls at the upper left of the screen.

When you click a point on the map, however, the Latitude and Longitude of that point ALONG WITH THE SIX-Character Grid Locator (also known as "sub-grid") for that point will pop up in a text balloon and the border of the SIX-Character Grid Locator will be shown. If there is good aerial photo coverage in your neighborhood, you might even be able to find your house!

This is provided as a service to the Amateur Radio Community by Laurent/Larry Haas, F6FVY, using the Google Maps API. Thanks to Larry and Google! Try it, I think you'll like it!

4. Scoring:
STILL WORKING OUT THE DETAILS.

Scoring will be distance based, 1 point per kilometer, for 2010.

It would certainly make things easier if EVERYONE knew, exchanged and logged SIX-Character locators but it is likely more certain that there will be participants that only know their FOUR-character locator. In such a case, RECORD what the other station actually SENDS as their Grid Locator even if JUST the FOUR characters. DO NOT use "look up" systems in logging programs, such as Ham Radio Deluxe has or can be done with Super Check Partial files...RECORD what the other station sends (it IS okay if what your lookup 'matches' what they sent but be sure to CHANGE it if they send something different).

I am not aware of MANY Logging Programs that have this scoring capability but the KEY item needed is that the program CAN record SIX-character Grid Exchanges and produce a proper CABRILLO formatted log file.

Rovers can be worked again as they enter a different "Grid Square" (Grid-4) but it is hoped that Rovers will have capability to know their SIX Character SUB-grid locator and give that as their report. "Dupes" will be allowed with Rovers (from different sub-grids in the same Grid-4 locator) but only the LONGEST single path length will be counted for a given Grid-4.

5. Reporting: Electronic Logs (Cabrillo format ONLY) must be received via e-mail or paper logs WITH summary sheet RECEIVED via Mail no later than following deadlines (roughly two weeks after the close of each event):
5.1. - 144 MHz - April 27, 2010
5.2. - 222 MHz - May 5, 2010
5.3. - 432 MHz - May 13, 2010
5.4. - Microwave (902+) - May 17, 2010
5.5. - 50 MHz - May 25, 2010

6. Awards:
6.1. Certificates/Plaques (if sponsored) will be awarded as follows:
6.1.1. TOP FIVE individual scores for each of the five Sprint "band" events (Single-Op Fixed, Rover and Rookie will be considered for this ranking).
6.1.2. TOP FIVE cumulative Single-Op Fixed scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.3. TOP FIVE cumulative Rover scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.4. TOP FIVE cumulative Rookie scores (adding scores together by callsign used from each of the events, up to 5, for which valid logs are received).
6.1.5. If a plaque is not sponsored for a particular finish above, a certificate (similar to what other VHF Contest sponsors provide) will be sent. "Specialty" plaques will also be considered (such as for best finish in a region) if anyone wants to sponsor such (and can

provide a clear criteria). Please contact John regarding that. To view what plaques have been sponsored (and criteria) for 2010, click here
6.2. Prizes: As they are sponsored, prizes will be awarded based on criteria of the sponsor. As an example, the simplest criteria will be "random drawing from all logs received." To view what prizes have been sponsored (and criteria) for 2010, click here

7. Submission of Logs:
7.1. By submitting a log, participants confirm that they have observed all contest rules, as well as all regulations established for amateur radio in their country and that their log submission is true and accurate to the best of their knowledge. Participants further agree to be bound by the decisions of the Spring Sprint host(s), sponsor(s) and scoring team.

7.2. Electronic Logs:
7.2.1. The "Cabrillo" log format is now the standard for the Spring Sprints.
7.2.1.1. Use the following text for the "CONTEST:" line in the header of the Cabrillo Log file:
For 144 MHz, use CONTEST: VHF-SPRINT-144MHZ-SPRING
>For 222 MHz, use CONTEST: VHF-SPRINT-222MHZ-SPRING
>For 432 MHz, use CONTEST: VHF-SPRINT-432MHZ-SPRING
>For "Microwave" (902 MHz & Up), use CONTEST: VHF-SPRINT-MICROWAVE-SPRING
>For 50 MHz, use CONTEST: VHF-SPRINT-50MHZ-SPRING7.2.1.2. Until logging programs with 'official' support for these events become available, the closest format is probably for the June or September ARRL VHF QSO Parties (as long as the logging program knows how to handle SIX-Character Grid Square exchanges). It may be necessary to manually edit the "CONTEST:" line in the file and Claimed Score is pretty much "guaranteed" to be incorrect since scoring is now based on distances as opposed to the "traditional" QSOs time Multipliers but the QSO data should be correct.
7.2.1.3. E-mail logs to: springsprintlogs@... preferably using a "Plain Text" e-mail format, with ONLY "your call" and the "band" in the subject line (WA2FGK 144 -or- K3TUF MICROWAVE for example) and with the log file as an attachment named "<your call>.LOG" (e.g. W9GKA.LOG)

7.2.2. "Web-to-Cabrillo": Bruce Horn, WA7BNM, has graciously agreed to provide 'web forms' to facilitate generation and AUTOMATIC SUBMISSION of Cabrillo-formatted logs for the Spring VHF & Up Sprints at the http://b4h.net/cabforms web site that he maintains. You may have to scroll down the homepage a bit to the "Other Contests" area to find the ones for the Spring VHF Sprints and they may not be there until just before the actual contests. PLEASE consider using these to generate and submit electronically instead of submitting a paper log. MANY THANKS to Bruce!

7.3. Paper logs:
7.3.1. Paper logs must include a Summary sheet and the log sheets themselves should include the following information:
Band (in MHz, e.g. 50, 144, 222, 432, 902. For above 902, change to GHz, e.g. 1.2, 2.3, 3.4, etc.)
>Mode (e.g. CW, PH, FM, RY)
>Date/Time (UTC Date and Time are strongly preferred but "local" are acceptable and it is usually apparent which was used when logs are received)
>Callsign SENT (can be listed at the top of a page OR on each line)
>Grid Locator SENT (PLEASE give your SIX-character locator when known AND send it as your exchange)

>Other Station's Callsign
>Other Station's Grid Locator (PLEASE ask for and record SIX-character when the other station provides it BUT, if the other station only reports FOUR-character, record the 4 characters)7.3.2. "Snail Mail" paper logs to:
2010 Spring Sprints
>c/o Chuck Towner, W9KQJ
>PO BOX 73
>PALATINE, IL 60078-0073

Hi Greg. Yes, there are a few tickets still available for the Indy Radio Club's bus to Dayton. Drop an email to the club's treasurer, Jay Willever, K9LJW, at ljwillever@... to make arrangements.

73,
Ken, KJ9B

From: kc9brz
Topic: 2473 Message: 2473

Gordon West's new Technician study manual for the new Technician license test that goes into effect July 1, 2010 is now available at Amazon. Here's the link:

http://www.amazon.com/exec/obidos/ASIN/0945053622/vietveteofamer29/ref=nosim
Or click here.

His current General Class manual is good through 2011:
http://www.amazon.com/exec/obidos/ASIN/0945053509/vietveteofamer29/ref=nosim
Or click here.

(The links are coded to give a commission to a local veterans group. No extra charge to the buyer.)

I like the Gordon West license prep manuals better than the ARRL manuals. The ARRL manuals are too big and intimidating, and too expensive unless you get one free for joining or renewing your ARRL membership.

2474. IPSC NIMS compliance requirements

Hi Ken,

Yes, I did skim through it, and for the most part, it does make good sense. In fact, it may lead to the elimination one of my major gripes about volunteering and the "color of your ID card". I've carried on about this in the past, so I don't particularly want to get back into that heated discussion. But as I look in from the outside, it seems that many of the "volunteer" organizations are competing with one another, other than attempting to work together. If one has met the qualifications of one group, the credentials are worthless to another. In the past, simply BEING a ham, was enough.sigh!

It will be interesting to observe exactly how all of the equipment will finally come to compliance. Batteries, power and coaxial connections, programming, and property control, not to mention controlling the usage of available bandwidth, from, now it seems, a central source. Sounds like a giant puzzle!

The main problem, will, most likely, get the individual groups to play nice together. That alone will be a major accomplishment!!!

Good luck with that!

Mike (N5CEC)

2478. My observations of the 2010 Hamvention

Yahoo group: IndyHamRadio
Date: 2010-05-17 18:45:39 UTC
From: Greg
Topic: 2478 Message: 2478

First off, it seemed that crowds were a little larger. Sunday seemed to be as large as what we have seen on many Saturdays.

Lots of folks taking FCC/VE exams. I heard that we had over 1000 take exams this year. Nice that it is free. If you fail, the cost is not that great. And Dayton folks give a rather nice certificate if you do pass.

Kenwood, ICOM and Yaesu all had new equipment. Kenwood has a new HF radio, the TS-509S and a new HT (2/440/APRS with an internal GPS in Garmin format), the TH-D72. ICOM has the IC-9100. And Yaesu has the FT-5000 (HF/6), the FTM-350R (2/440/APRS) and a upgrade of the VX-8.

The ARRL has a new feature for its digital Repeater Directory. They are in the process of making it available so that you can download it to a Garmin Nuvi. That should go well with APRS (ie Argent Data).

The Chameleon Antenna was very interesing. Nice package that would make a very good portable/mobile antenna for emergencies. Some are using it as a primary antenna.

There seemed to a problem with shoplifting. I heard concerns about the ARRL area that items were being taken. And some problems at the Flea Market. I noticed that security was a bit more intense (required by insurance and cost over $20,000 for the police presence). BTW, just having HARA take care of trash is over $10,000!

I did not get out to the Flea Market much. One of hams from my area did find an SDR complete and built for $200.

Yes there might have been problems. But a lot of folks are now parking at the former car dealership across from the Arena ($10 per day). Nice to be able to just walk over.

What was it that you experienced? I know that I missed a lot.

From: Bob Burns W9RXR
Topic: 2478 Message: 2479

Quoting Greg <n9nwo@...>:

> First off, it seemed that crowds were a little larger. Sunday
> seemed to be as large as what we have seen on many Saturdays.

I was there on Friday and the crowd inside may have been a little down from last year. Roger at R&L Electronics seemed a little concerned about the lack of traffic at their booth. It was terribly humid inside the arena and quite uncomfortable.

> Kenwood has a new HF radio, the TS-509S and a new HT (2/440/APRS
> with an internal GPS in Garmin format), the TH-D72.

I believe the new Kenwood HF radio is the TS-590S.

The new handheld is being referred to on-line as the TH-D72, but the Kenwood guy I talked to at the booth didn't seem certain that would be the actual model designation. No matter what the name, the new handheld probably won't be on the market until late 2010.

> ICOM has the IC-9100.

Interesting radio. HF + 6m + 2m + 70cm with an add-on band module for 23cm. Also an add-on D-Star module. The HF+6+2 capabilities replace the IC-746 Pro which is out of production (I'm glad I bought one this spring while they were still available). And the VHF/UHF capabilities replace the out-of-production IC-910H. With all the options, the IC-9100 will probably have a list price around $4000.

> And Yaesu has ... a upgrade of the VX-8.

I'm getting mixed signals about this. Yaesu was supposedly telling people at their booth that the upgrade will be $60, but the parts may not be available until sometime next month. I've also heard that the upgrade will never be available. Take the rumor mill for what it's worth.

Either way, it's unfortunate that a radio as complex as a modern dual-band handheld with APRS capabilities is built with firmware that can't be easily upgraded. Since Yaesu is waiting for "parts", that tells me that the upgrade includes swapping out a firmware ROM. Yikes! Why didn't they build the radio with a ROM that can be reflashed?

> The Chameleon Antenna was very interesing. Nice package that would
> make a very good portable/mobile antenna for emergencies. Some are
> using it as a primary antenna.

I think I saw this, but I'm not sure. Tell us more.

> There seemed to a problem with shoplifting. I heard concerns about
> the ARRL area that items were being taken.

Maybe because of frustration over having to wait so long to be served? The folks working the sales area at the ARRL booth didn't appear to be very well organized on Friday. I used to work a former employer's booth at Dayton and we were typically spread out over four to six booths. We worked really hard at making our operation efficient so we could take care of customers quickly. Sadly, I didn't see that attention to efficiency at the ARRL booth. I bought the Travel Plus (electronic repeater directory) plus Repeater Directory combo on Friday morning because the the deal was only available at the ARRL booth. I went back in the afternoon to buy another book that wasn't available at the other retailers. Both times, I had to wait a long time to get anyone's attention in the booth.

> I noticed that security was a bit more intense (required by
> insurance and cost over $20,000 for the police presence).

I did notice Trotwood Police officers walking around inside and also noticed Trotwood PD cars at the Salem Mall parking lot. Definitely an appreciated presence.

> BTW, just having HARA take care of trash is over $10,000!

And all of these expenses should be taken care of by ticket and booth rental revenue. Sometime when you are bored, start doing the math for how much this event takes in.

> But a lot of folks are now parking at the former car dealership
> across from the Arena ($10 per day).

I parked at Salem Mall like I usually do. The bus pass was $8 for the weekend.

> What was it that you experienced?

I know when I read the wrap-up articles in QST and CQ, I'll realize that I missed some interesting new products. I did see and purchase what I went over there for. I bought another Kenwood TM-D710 and a bunch of other little things. I also went to the APRS forum and learned about some new products there. At the ARRL booth, I found out about some courses they are offering. For the most part, though, I went over there with a mission and kept moving.

Bob...

Embarrassingly enough, I've not been active at all for several years. I probably haven't been to Dayton in close to 10 years. This year, however, weekend plans fell through --- and I attended the Hamvention!

With the weather forecast for the weekend looking pretty bad for stargazing (astronomy is the other hobby), I cancelled my trip to western Illinois. I then got to thinking about heading to Dayton for the day. One thing led to another (the camper was already packed and ready to go), so I called one of the campgrounds on the Hamvention web page. "Yes, we still have plenty of spaces, yes we run a shuttle to the front door of the arena, and yes we can reserve you a spot." So I headed out on Thursday afternoon --- after all, I wanted to be ready to go on Friday morning!

As we were getting off of the shuttle bus (ok, so it was only a van), the first thing I noticed was that "the flea market looks empty"! Nothing like I remember from years ago --- the arena wasn't open yet, so EVERYBODY was still outside. No problem walking around --- no having to "flow with the tide" of the crowd. Nothing like them "good ole days"! One note to self --- ice pick is necessary to help the elimination of all of the stupid golf carts. Heads up --- somebody will need to start a tire repair service! Those blankety-blank things were everywhere --- sorry, where I grew up PEDESTRIANS had the right of way!!!

I managed to walk all of the isles outside --- not too much grabbed my attention, so I was able to keep a fairly decent pace.

Once inside, I once again noticed the lack of the shoulder to shoulder "packed in" crowd. The biggest crowd in the whole place was the line for the Yaesu hats!!

Having been inactive for as long as I have been, the Dayton "experience" was a good one. If I do get active once again, I've got a LOT of catching up to do!! (and I would really like one of those Kenwood '480s to play with!)

The weather was perfect, it wasn't too crowded, I learned a lot, ran into a bunch of old friends. Life is good!!!

Now, how in the heck am I gonna get this new Carolina Windom 160 up into all of these trees...

I haven't been to Dayton for about 5 years. I figured it was about time to go again.

I got into town very late Thursday (or maybe should say early Friday - 2 am). The streets of Dayton were empty but I had no trouble getting to my room in the Crowne Plaza.

On Friday I did notice that the flea market was smaller than I remembered in 2005. I didn't see a whole lot that I was interested in but I had a great time chatting with old friends who had flea market spaces. The HAARP forum on Friday morning was fascinating.

I figured more people would appear on Saturday and they did but still not a packed flea market like I remember in the past. I spent a lot of time at the VHF Weak Signal, DXing and Contesting forums. Those were great.

The hospitality suites at night were a blast as usual. Anyone who didn't make it to the SMC suite on Friday night missed a lot of fun.

The weather was the best I've seen it. I don't think it can get any better!

Where do you go in western Illinois for stargazing, Mike? The University of Illinois astronomy department once had a telescope in Walnut Point State Park, about 30 miles south of Champaign. They had a 48 inch reflector telescope in a large building including living quarters for a small number of people and a smaller auxiliary 12 inch reflector scope in a small observatory including dome a distance from the large building. That building is still there but all sealed up due to vandals wrecking the insides. The small telescope was inherited by the Champaign-Urbana Astronomical Society after Walnut Point observatory was closed. It stands, complete with observatory building and dome, just southwest of Willard Airport south of Champaign. I go out there once in a while.

Hi Darren,

I'm not sure about the actual discounts. Many of the dealers play up the "Hamvention pricing", but I'm not convinced just how special that pricing may be. One thing though --- I was curious about purchasing a new handheld, so I went to five different dealers inquiring about price. On one (high end Icom) model, the price difference was $40.00 between two dealers that were set up across the aisle from one another. It is nice to be able to wander around and compare both products and prices. If you have never been, you should go at least once --- just to say that you've been there!

Hi Zack,

Glad that you too, got back to Dayton this year. The weather was as perfect as anybody could have wanted. I, for one, can attest to the fact that the water runs across that flea market fast enough to flow OVER your shoes!!! Been there, done that, way too many times!

The weekend stargazing event was a small star party that people have on their property near (greater metropolitan) Barry, Illinois. That's just off of I-72 at the 20 mile marker. In June a friend and I have a little get together at Jim Edgar Panther Creek State Park (JEPC), also in Illinois. We discovered that we can rent the group campground for only $40.00 a night (or $4.00 per person whichever is higher), and they "astronomy friendly enough to allow us to turn off the security lights. My wife is from Bloomington, Illinois, so we travel through Champaign all of the time. We'll have to do some homework on that observatory and visit some day. Thanks for that info!

Mike

As you mention, Mike, the ability to "price shop" is a great selling point for the Hamvention. As far as "good deals", about the best deal is there is no shipping added. I ordered an antenna at R&L that Roger didn't have on site, and it will be shipped free. I think those are the kind of deals that draw folks in.

Listen to DSTAR via the internet

Everyone is welcome to listen to DSTAR without purchasing any equipment. A DSTAR feed is now available via the radioreference.com website. This feed is usually connected to Reflector 1c which is generally the busiest feed.

The direct link is: http://www.radioreference.com/apps/audio/?feedId=1647

Scroll to the bottom of the page & look for the DSTAR link. Click on the "speaker" icon to start listening.

You can also listen to any of these feeds via your iphone or blackberry as long as you have the unlimited data plan.

A week or so ago there was a post about needing operators for the radio room at the USS Indianapolis memorial. I have misplaced the post but I am interested in volunteering some time to work CW from the site.

My wife's uncle Bill was in the Navy and served in the Pacific during WWII. His job was to install clandestine radio stations on the various rocks and islands so spotters could radio in Japanese ship positions (Think of the movie "Father Goose" with Cary Grant). I would like to invite him to come and observe the radio room sometime, hopefully when I am there operating. He's not getting any younger, so who do I need to contact?

I have been there. The Memorial is free, lots of things to see besides the radio room. The radio room is set up like the two radio rooms on the USS Indianapolis. The callsign is WW2IND. Here is the web page http://www.indyradioclub.org/ussindy.htm

Here are some pictures http://www.ussindyradio.org/ussindyradiormexhibit.htm

Just do a web search on "Indianapolis war memorial radio" as there are even more links out there.

I visited the website and there is a "Museum Ships Event" on June 4-6th, this is a nationwide event involving museum ships and memorial ships all over the country.

http://www.ussindyradio.org/ussindyopssked-info2010.htm

Contact Chuck W9IH (indytrax@...) if you'd like to volunteer for an operating slot. They will be running CW, SSB, and PSK. On Saturday and Sunday morning there will be an AM station available for operating.

The schedule on the webpage is pretty empty so it looks like that could use some help. I have volunteered for Friday night or Saturday night but I have not heard back from Chuck yet...I just sent him my email so I don't expect to hear anything today.

I just got the Indianapolis Communications and Technology Expo flyer in the mail today. I think this is what we used to call the Indy Hamfest but not 100% sure. Didn't this used to be a Indiana State ARRL meeting?

BTW there will be NO testing at this event, the flyer says this is due to increased costs and "other factors"...so no VE team will be on hand. VE teams are FREE, so I wonder what the "increased costs" are about.

They will be having a Homebrew Contest, and a QSL card contest and some meetings.

10:00 - Combined MARS meeting
12:00 - Indiana Radio Club Council Meeting
13:00 - Indiana Repeater Council

Meetings are open to the public. Tickets are $6 advanced sale, and $8 at the gate

FREE admission to military members in uniform...why do they have to be in uniform? I believe my son has been under orders for the last 4 or 5 years that prevent him from traveling in uniform when on commercial transportation...so he doesn't even bring his uniform home with him. He's a Marine Sgt. and he has a military ID...why can't they just show their ID?

Indoor Tables are $40 each
Covered Table Spaces (8 foot) are $15 each
Outdoor Flea Market space (10 ft) is $5 each

Call the Hamfest HOTLINE at (317)261-6658 for more details

Since I am not aware of any suitable facilities on site for VE testing, I suspect that the increased costs are for the off-site facility where the testing was held. Not certain of this, just a guess. Yes, those of us who serve as VE's do not charge for our services. However, we are not always blessed with free access to a suitable testing facility.

Yes, this is what is commonly known as the Indy Hamfest or, as we originally called it in the early 1970's, the Indianapolis Hamfest.

Yes. Not sure what has driven the name change over the years, but
I'll speculate that it's a nod towards the non-amateur radio
merchandise that shows up at a typical hamfest.

> Didn't this used to be a Indiana State ARRL meeting?

While this event is still listed as an ARRL hamfest (see the hamfest
listing on the ARRL web site
http://www.arrl.org/hamfests-and-conventions-calendar), the ARRL
Indiana State Convention has been held in conjunction with the Fort
Wayne Hamfest & Computer Expo in November for the past several years.

>BTW there will be NO testing at this event...

Note that there is no requirement to have VE testing at an ARRL
hamfest. You can see the ARRL hamfest and convention rules at:
http://www.arrl.org/files/file/New%2520Convention%2520Hamfest%2520Rules.pdf

The date of this event is July 10, 2010.

Bob,

Thanks. I knew VE testing was not required for it to be an ARRL event, I was just surprised to see there would be no testing. All part of the shrinking hamfest infrastructure perhaps?

I will be there to sniff out the goodies and support the efforts of the hamfest organizers...and to meet with friends and fellow ham radio enthusiasts. The price is right too.

I hope they change their mind about requiring active military to be in uniform, as sometimes that is just not possible.

Have a great holiday weekend, and let's all try to remember the reason for this season. Some of our veterans gave up all their tomorrows, so we could still have ours.

I thought the Dayton Hamvention went well. Lots of bargains both inside and out. Good weather and the attendees seem to be in a festive mood. I give it a 9 out of 10, only because the grand prize is not in my ham shack….

I'll be with the Clark County (IN) Amateur Radio Club at Edwardsville
Park here in southern IN.

We will be using W9WWI, 3A IN...

I will have my Rover station at the field day site.
We will have:
100 watts and 3 elements on 6,
160 watts and 10 elements on 2, and
100 watts and 18 elements on 432.

Plus all of that HF stuff ;-)

Darl, Are you buying? Will any of the Colts cheerleaders be
there looking for "elmering" in the fine art of ham radio ?

By the way, what club, group, organization, granfalloon or karass is that?

No I was thinking you was going to pay. HA HA
No we all go dutch. If you bring the colts cheerleaders they will be there but that is the only way.

We are just some hams getting together. not a club. But all is welcome..

2506. ARRL June VHF QSO Party, June 12 - 14

Yahoo group: IndyHamRadio
Date: 2010-06-04 11:24:54 UTC
From: Mark Thompson
Topic: 2506 Message: 2506

ARRL June VHF QSO Party, June 12 - 14

http://www.arrl.org/june-vhf-qso-party

ARRL June VHF QSO Party Rules
1.Object: To work as many amateur stations in as many different 2 degrees by 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend in June. Begins 1800 UTC Saturday, ends 0300 UTC Monday (June 12-14, 2010).
3. Entry Categories:
3.1 Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2 Single Operator Portable.
3.3 Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition.

3.6. Multioperator:
3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.6.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3 GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees by 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Reporting:
6.1. Entries may be submitted as follows:
6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@...
6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.
6.1.3. Web entries submitted via the web-based applet at:http://www.b4h.net/cabforms/
6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper print outs of electronic files are not acceptable substitutes.
6.3. Entries must be emailed or postmarked no later than 0300 UTC Wednesday, July 14, 2010. Late logs may be designated as checklogs only.
7. Miscellaneous:
7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.
7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7.4. Forms may be obtained by:
7.4.1. Downloading the form here.
7.4.2. Sending an SASE with 2 units of postage to June VHF Form Request, ARRL, 225 Main St, Newington, CT 06111.
8. Awards: Certificates will be awarded in the following categories:
8.1. Single Operator.
8.1.1. Top Single Operator Low and High power entry in each ARRL/RAC Section.
8.1.2. Top Single Operator Low and High power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or

competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if W1INF has the highest Single-Operator all-band score in the CT Section and his 50- and 222-MHz scores are higher than any other CT single operator's, he will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
8.2. Top Single-Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single-operator Portable entries are not eligible for single-band awards.)
8.3. Top Rover, Limited Rover and Unlimited Rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
8.4. Top Multioperator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
8.5. Top Limited Multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)
8.6. Plaques, if sponsored, will be awarded in the following categories:
8.6.1. Top Overall Single Operator (both High and Low Power) scorers.
8.6.2. Top Overall Single Operator Portable scorer.
8.6.3. Top Overall Rover, Limited Rover and Unlimited Rover scorers.
8.6.4. Top Overall Multi-Operator scorer.
8.6.5. Top Overall Limited Multi-Operator scorer.
8.6.6. The leading scorer in each entry category for each ARRL Division, Canada, Mexico, and DX (non-W/VE/XE) station.
9. Other:
9.1. See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)"

Hey guys...I am going to be working some CW tonight at the WW2IND site for the Museum Ships on the Air event. I saw on the website that I need to bring my own paddles/key/bug etc...so I have that with me. I don't see anything about headphones. Do I need to bring mine or do they have spare sets there?

2512. AMSAT 2010 Space Symposium at Elk Grove Village, IL

Yahoo group: IndyHamRadio
Date: 2010-06-06 04:45:39 UTC
From: Mark Thompson
Topic: 2512 Message: 2512

http://forums.qrz.com/showthread.php?t=251141

AMSAT Announces 2010 Space Symposium

AMSAT announces the 2010 Space Symposium and Annual Meeting will be held on Friday, October 8 through Sunday, October 10. This year we have selected the Chicago/Elk Grove Holiday Inn which is near O'Hare Airport for the event. This is the same hotel that recently has hosted the Central States VHF Conference, TAPR and W9DXCC events.

All Amateur Radio Operators interested in space communications are invited to participate in the Symposium offerings including:

* Space Symposium with Amateur Satellite Presentations
* Operating Techniques, News, & Plans from the Amateur Satellite World
* Board of Directors Meeting open to AMSAT members
* Meet Board Members and Officers
* Annual General Membership Meeting
* Annual Banquet—Keynote Speaker and Door Prizes
* President's Club Reception
* Area Coordinator's BreakfastThe Chicago/Elk Grove Holiday Inn is located at 1000 Busse Road, Elk Grove, IL (near O'Hare Airport with free hourly shuttles). The room rate and reservation information will be announced shortly.

Watch the AMSAT Symposium Page www.amsat.org/amsat-new/symposium/2010/index.php
for more news as it becomes available.

2010 Space Symposium First Call for Papers, Posters & Presentations

This is the first call for papers for the 2010 AMSAT Space Symposium and Annual Meeting to be held October 8 - 10 at the Chicago/Elk Grove Holiday Inn near O'Hare Airport.

The Symposium Committee invites proposals for:

* Papers for publication in the Proceedings
* Symposium Presentations
* Poster Presentations
* Equipment and Operating DemonstrationsThese can be on any topic of interest to the amateur satellite community. We request a tentative title of your paper/presentation as soon as possible, with final copy submitted by September 1, 2010 for inclusion in the printed proceedings.

Abstracts and papers should be sent via e-mail to k9jkm@...

The 2010 Symposium Author's Guide can be found at
www.amsat.org/amsat-new/images/fck_images/AuthorGuide2010%283%29.txt

CHIRP - A First Look
By David Lane
If you own an ICOM D-STAR radio, you know how hard it is to program
through the faceplate. And if you are a Linux user, you know that your
options are either use the faceplate or borrow a Windows machine (or
fire up a VM) and plunk down $60 for the software and cable to program
them with. Until now that is. Enter CHIRP.
Amateur Radio Forums, Now With Tech Support!
By David Lane
Have you ever had that question, the one that you just know someone else
has solved, but you cannot figure out the right words to put into the
query so that Google will spit back the right answer? Or worse, you
just know deep down inside that someone has not only wrestled with the

problem, but solved it and they just never got around to writing up the solution and posting it somewhere for everyone to see?
From the very first issue of Linux Journal (March 1994): Linux and Hams
By Phil Hughes
A trip down memory lane:
A couple of weeks ago I posted the following to the Usenet newsgroup comp.os.linux.misc. I am the editor of Linux Journal, a paper magazine that will be covering the Linux scene. In my correspondence with people about writing articles for LJ I have seen an amazing number of ham calls. Being a ham myself (WA6SWR) I was just wondering how many of “us” are.
Ask KG4GIY
By Carlie Fairchild
We're launching a new column on LinuxJournal.com entitled Ask KG4GIY, and it's likely to be exactly what you might expect. You ask questions, and Mr. David Lane himself will give you answers! We'll select 4 or 5 questions each time for David to respond to, and will make sure to feature his answers here in the LJ Hamshack newsletter (as well as online and possibly for inclusion in to the print magazine). I suspect we'll all end up having a bit of fun with this... so SEND US YOUR QUESTIONS! We'll send a batch of Linux ham stickers to everyone whose questions we chose to run.

2527. New Node and Stations

Yahoo group: IndyHamRadio
Date: 2010-07-04 18:01:49 UTC
From: w9dew
Topic: 2527 Message: 2527

I just wanted to drop you a note and let you know there are two new stations in the Indianapolis area on 145.050.

Jerry, N9LYA and Neil, K9CTB; have installed a node on top of a building at 38th St and Meridian Street. It is W9HU-7. It is a two port node station the second port is on 147.555. it should have very good coverage, as it is pretty high.

Also, I finally got the Indiana Department of Homeland Security RACES Team Node going at the Indiana Goverment Center at Washington and West Streets downtown Indy. Presently it is using a magmount mobile antenna, but before I go back to work on Tuesday, 7/6, I hope to get it connected to a better antenna, CX-333.

You are welcome to use either of these stations.

73,
Don

From: Greg O
Topic: 2528 Message: 2528

The Troy Ohio Police Department is investigating an abducted child from Troy, Ohio. Troy, Ohio is approximately 50 miles east northeast of Richmond, IN. Zane Bedinger, 7 years old, a White /Male with a dark complexion/4 foot tall/ 65 pounds/ with Blonde hair and Brown eyes/possibly a scab on knee. Zane Bedinger was last seen in Troy, OH, and is believed to be in extreme danger. Zane Bedinger was wearing gray swimming trunks with black flowers and flip flop sandals. The Troy Ohio Police Department says Zane Bedinger was likely abducted by his father, Jeff Bedinger, 50 years old, a white male, 6' 3", weighing 235 pounds, with brown hair and brown eyes. The child and the suspect, Jeff Bedinger are believed to be driving in a Silver, Honda Accord, with Ohio license plates, EDT 6242. A dog may also be in the vehicle. Jeff Bedinger is believed to be armed and dangerous. Public should not approach Jeff Bedinger or the silver Honda Accord. Jeff Bedinger is believed to be headed to Indiana at this time. Bedinger is believed to possibly be enroute to the Carmel or Hamilton County area. If you have any information on the abduction of Zane Bedinger, contact the Troy Ohio Police Department immediately by calling 1-888-58AMBER. That number is 1-888-58AMBER.

Subject: VHF conference, please post to members

Hello to all Radio Amateurs;

I just want to extend an invitation to you to come to St Louis, MO for the 44rd annual Central States VHF society's annual conference. If you have any interest in the VHF and UHF weak signal activities, this gathering is for you. This year the conference is being held at the Doubletree Hotel St Louis at Westport, near I-270 and MO 364, on the dates of July 22 through the 25th.

The conference starts with registration on Thursday (7/22) evening, with a social gathering, and registration extends through Friday, July 23, with antenna measuring, preamp measuring and talks/seminars also scheduled throughout the day. On Saturday, the seminars continue, and a banquet and prize drawing are featured that night. Other features include a dealer display, of VHF/UHF goodies, flea market, family program with tours of many attractions in and around St Louis, rover and antenna displays, and lots of socializing with familiar voices, which allows you to meet many of those with whom you have been QSOing with.

Much more detailed information on the 44th conference can be found at the website; http://www.csvhfs.org, including links to the hotel for those who plan to stay the duration, and a link to an online registration page for conference registration. Many in the St Louis area may opt just to attend for the day on Saturday, but come and join us for the entire weekend if you can.

For more information, you can contact me here, at the address in the header, or please send an email to Ron Ochu, KO0Z, the conference host. He can be reached at ko0Z{at}arrl.net

Thanks for considering, hope to see you in St Louis!

Found this on the net: http://www.indyradioclub.org/hfk9ooa2010.htm
(go to that web page for actual email links, etc)

Broad Ripple Hamfest

Saturday, August 7th, 2010

SIXTH Annual Amateur Radio, old fashion Tailgate & Swapfest for
ham radio folks at the Home of Betty & Joe Lobraico in Broad Ripple .
Hey!; who wouldn't enjoy free food and fellow hams to chat
with about those days of old, latest ham radio project or those to come?

Click here for some of the event PIX !

The Broad Ripple Hamfest will be held August 7, 2010
from 7:00AM to 1:00PM. Located on the north side of
Indianapolis at 7373 Westfield Blvd. There are no fees.
It is about a mile north of Broad Ripple and about a mile
south of Nora.

Across the road is the Monon Trail, a good place for your
family members to walk, roller blade or hike the trail while
you enjoy the friendship of you amateur friends.
MAP or Google MAP

Joe-K9OOA & Betty-K9OOB will provide coffee & Donuts at 7AM.

The Indianapolis Radio Club will provide hot dogs, buns,
condiments and soft drinks. (PICNIC starts at 11AM)

Participants are requested to bring one (1) pitch-in-dish and
their own plates, cups and utensils.

For further information, contact K9OOA, Joe Lobraico,
at Email K9OOA or call 317-255-3000.

PS. There are no fees. The Hamfest is tailgate only.

Bring plenty of goodies to trade, sell or give away….

> has started keying up on it's own...

I have a TM-V71 and two TM-D710s which use the same RF deck. I've not seen the symptom you describe and can't imagine what might be causing it. (The D710s will key up on their own when they are in APRS beacon mode, but your V71 doesn't have APRS functionality.)

Probably best to call one of the Kenwood service centers or the dealer you bought it from to see if they have any ideas.

Bob...

Hey everyone,

Please join us for the next dinner which will be held at Sahm's, 11505 Allisonville Rd., Fishers, IN at 7pm on Saturday, July 17th. Sahm's is holding tables for us so we all need to be there a few minutes early to be assured a seat with the rest of the party. As always, this is a family restaurant and everyone is welcome.

We look forward to seeing you there!

Rhonda

2538. FYI: FCC Okays Employee Participation in Emergency Drills

Yahoo group: IndyHamRadio
Date: 2010-07-15 17:36:53 UTC
From: Greg
Topic: 2538 Message: 2538

From WorldRadio Online:

FCC Okays Employee Participation in Emergency Drills

Moving with unaccustomed speed, the FCC adopted a Report and Order on July 14, allowing hams who are employed by both government agencies and non-government agencies such as hospitals, to participate in emergency and disaster drills on behalf of their employers. The ruling was based on a Notice of Proposed Rule Making, WP-10-72, issued this past March, in response to petitions arising from a strict interpretation by the FCC's Enforcement Bureau of the prohibition on amateurs communicating on behalf of their employers. The decision came just more than a month after the reply comment deadline.

The ruling added a new paragraph to Section 97.113(a)(3) of the FCC rules, which reads as follows:

(i) A station licensee or control station operator may participate on behalf of an employer in an

emergency preparedness or disaster readiness test or drill, limited to the duration and scope of such test or drill, and operational testing immediately prior to such test or drill. Tests or drills that are not government-sponsored are limited to a total time of one hour per week; except that no more than twice in any calendar year, they may be conducted for a period not to exceed 72 hours.

There is no specific effective date given in the Report and Order, so it will presumably become effective upon publication in the Federal Register. The complete text of the report and order may be accessed online at
http://www.fcc.gov/Daily_Releases/Daily_Business/2010/db0714/FCC-10-124A1.pdf

2541. ARRL August UHF Contest, August 7 - 8

Yahoo group: IndyHamRadio
Date: 2010-07-30 18:33:00 UTC
From: Mark Thompson
Topic: 2541 Message: 2541

http://www.arrl.org/august-uhf

ARRL August UHF Contest, August 7 - 8

* Contest Objective-
To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
* Dates+
* Bands+
* Log Submission Deadline+
* Contact Information+
* Awards+
* Paper Entry Forms+
* Log Sheet+
* Power Limits by Category+
Full Contest Details
1. Object: To work as many amateur stations in as many 2 degrees by 1 degrees grid squares as possible using authorized amateur frequencies above 222 MHz and all authorized modes of emission.
2. Date and Contest Period: First full weekend of August. Begins 1800 UTC Saturday, ends 1800 UTC Sunday (August 7-8, 2010). Entrants may use as much of this time as they wish.
3. Entry Categories:
3.1 Single Operator – Low Power
3.2 Single Operator – High Power
3.3. Rover: A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1.A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score

for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Limited Rover. Same as the "Rover" class above, but operation is permitted only on the 222 MHz, 432 MHz, 903 MHz and 1296 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
3.5. Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.
3.6. Multioperator.
4. Exchange: Grid-square locator (or see April 1994 QST, page 86).
4.1 Exchange of signal report is optional.
5. Scoring:
5.1 QSO points:
5.1.1 Count three points for each complete 222- or 432-MHz QSO.
5.1.2 Count six points for each complete 902- or 1296-MHz QSO.
5.1.3 Count 12 points for each 2.3-GHz (or higher) QSO.
5.2 Multiplier: The total number of different grid squares worked per band. Each 2 degree by 1 degree grid square counts as one multiplier on each band it is worked.
5.3 Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score. Example: W1AW works W3CCX in FN20 on 222, 432 and 1296 MHz. This gives W1AW 12 QSO points (3 + 3 + 6) and also three grid-square multipliers. Final score is 12 QSO points X 3 multipliers, or 36.
5.4 Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1 Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
6. Miscellaneous:
6.1 Partial QSOs do not count. Both callsigns, full exchanges and acknowledgment must be sent and received.
6.2 A transmitter, receiver or antenna used to contact one or more stations under one call sign may not be used subsequently during the contest period under any other call sign (with the exception of family stations). The intent of this rule is to accommodate family members who must share a rig, not to manufacture artificial contacts.
6.3 All equipment and antennas used by entrants must be owned and operated by amateurs. Use of non-amateur owned gear is not prohibited, but use of such equipment places the entrant in a separate category, ineligible for awards.
6.4 Contacts made by re-transmitting either or both stations, whether by satellite or terrestrial means, are prohibited. Frequencies regularly occupied by a repeater in a locality may not be used for contest work, even if the

repeater is turned off.
7. Awards: Certificates will be awarded in the following categories:
7.1 Top single-operator High and Low power score in each ARRL Division.
7.2 Top single operator High and Low power score on each band (222, 432, 902, 1296 and 2304-and-up categories) in each ARRL Division where significant effort or competition is evidenced. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band achievement stickers.) For example, if W1AW has the highest single-operator multi-band score in the Atlantic Division and his 432-MHz score is higher than any other Atlantic Division single-operator's, he will earn both a certificate for being the single-operator Division leader and an endorsement sticker for 432 MHz.
7.3 Top multi-operator score in each ARRL Division where significant effort or competition is evidenced. (Multioperator entries are not eligible for single-band awards.)
7.4 Top Rover, Limited Rover and Unlimited Rover score in each ARRL Division.
7.5 Additional certificates may be awarded where significant effort or competition is evidenced.

8. Submission: Deadline for submission of entries for this contest is 1800z Tuesday, September 7, 2010.
8.1 Paper logs and properly completed summary sheets should be mailed to: August UHF Contest, ARRL. 225 Main Street, Newington, CT 06111.
8.2 Cabrillo formatter logs should be emailed to AugustUHF@arrl.org
8.3 Participants may submit using the Web Applet at www.b4h.net/cabforms .
8.4 Entries postmarked or email dated after the deadline may only be considered checklogs.

9. Other: See "General Rules for All ARRL Contests" and "General Rules for ARRL Contests on bands above 50 MHz (VHF)" November 2001 QST.Questions regarding this contest should be emailed to contests@... . Only use the contest-name email for submission of entries. All contest forms and rules may be downloaded here.

2542. Scouts High Altitude Balloon ATV/Repeater/Digital Mode Beacons, August 7th

Yahoo group: IndyHamRadio
Date: 2010-08-03 02:34:37 UTC
From: Mark Thompson
Topic: 2542 Message: 2542

http://forums.qrz.com/showthread.php?t=258523

High Altitude Balloon for Scouts to carry ATV/Repeater/Digital Mode beacons on Aug 7

To Radio Operators across IL, IN, WI, OH, MO, KY and beyond...

August 7th, 2010 as part of the Scouts Space Jam Technology Merit Badge Workshop, more info at http://spacejamboree.com, 2 helium balloons will launch with ham radio aboard... details below, we appreciate signal reports, or participation.

Balloon 1 (DePauw University BASE Flight 48)
schedule to launch approx. 8:00 CT from Rantoul, IL
APRS Tracking 144.390MHz using callsign N9QGS-11 every one minute with no path
DominoEX-22 followed by 300 baud ASCII RTTY (200 hz shift) every minute with Morse code ID every 5 minutes. Flight can be tracked at http://www.spacenear.us/tracker
Amateur Television from balloon on 434 MHz NTSC
Flight scheduled for 1000/ft ascent till burst at ~95,000ft

Balloon 2 (DePauw University BASE Flight 49)
schedule to launch approx. 8:30 CT from Rantoul, IL
APRS Tracking 144.390MHz using callsign W9YJ-11 every one minute with no path
Cross band repeater with input frequency: 144.360 MHz and an output frequency: 446.025 MHz down, no PL, please check in with net control (contact with ISS and scouts possibly may be rebroadcasted during flight through balloon.)
A float valve will be used to keep repeater up at 60,000+ feet for approx. 90 minutes; Estimated time for cross band maximum range should be approx. from 1430 UTC till 1600 UTC and above 45 kft from 1415 UTC till 1630 UTC.
DominoEX-22 and RTTY 300 baud (200 spacing) Ascii every minute on TBA frequency and callsign (watch twitter for this information)

How to follow the action on the internet:
You can track the balloons using APRS technology at http://tinyurl.com/2ed2u85
Watch decoded DominoEX/RTTY flight data at http://spacenear.us/tracker
Flight details and status on Twitter at http://twitter.com/base_depauw

2547. Tailgater today

Yahoo group: IndyHamRadio
Date: 2010-08-08 00:43:52 UTC
From: KB9BVN
Topic: 2547 Message: 2547

Many thanks to Joe and Betty and the IRC for the fantastic tailgater today. I attended with a couple of friends, W9ILF and W9DEW and got to finally meet and greet with a bunch of hams I had only previously spoken to. I think everyone there was finding plenty of treasure to buy, swap, and sell and the weather was just perfect. How did you guys get the weather to cooperate?

The only thing I got today was a plastic hoot owl, about 12 inches tall. It has a motion detector in it and when triggered the eyes light up and it says HOOOOT HOOOOOT. My 3 year old grandson lives with us (along with his mom and baby brother while my son is awaiting his exit from the USMC) and he likes to sneak out of his room and lay on the floor at the back of the living room while we watch TV. So tonight I will stick the Hoot Owl in the hallway to sound the alarm when he leaves his bedroom. Hahah...I can hardly wait.

Looks like there will be a tailgater in Greenfield in September...can't wait. I think these tailgate events are really helping to fill the void of the dying hamfest business. It's kind of nice to trade stuff with guys and gals you know instead of out of town flea marketeers.

The Dinner for this month will be at

Blueberry Hill Pancake House
7803 E Washington St, Indianapolis, IN 46219

Cross Streets: Between S Franklin Rd and I-465

It is going to be at 7:00 pm on the Saturday the 14

Hope all can make it out to share some storys and eat some good food.

2549. Lafayette Hamfest - this weekend!!

Yahoo group: IndyHamRadio
Date: 2010-08-12 20:57:42 UTC
From: Greg
Topic: 2549 Message: 2549

Just a heads up, it is this weekend....

We will have a questionnaire at the Hamfest. It has several questions. If you can not come and want to give input, please email me. The questionnaire is non binding and is for the information of the club membership for future planning.

1. Do you prefer to have the Lafayette Hamfest on:
- Sunday (as it is now)
- Saturday

2. Do you prefer the Lafayette Hamfest on:
- third weekend of August (as it is now)
- the fourth weekend (closer to Labor Day)
- prefer another weekend _____

3. Any other suggestions that you think might help the Lafayette Hamfest attract more amateur radio operators in attendance?

Greg Dean
n9nwo@...
VP, TARA
Hamfest Chairman

Lafayette Hamfest

Sponsored by the Tippecanoe Amateur Radio Association
*** Latest information at: www.w9reg.org ***

Sunday, August 15, 2010
8am ☐ 12 noon

** Hourly Drawings 9am until the Grand Prize drawing at noon **

Tippecanoe County Fairgrounds

1401 Teal Road (SR 25) Lafayette, Indiana

Note: The Hamfest is at the north end of the fairgrounds (by the YMCA) in the Home Economics building. Check the web site to see if Saturday set-up is available.

2552. RACES vs ARES

Yahoo group: IndyHamRadio
Date: 2010-08-18 02:37:41 UTC
From: Greg
Topic: 2552 Message: 2552

Just some general questions about the two organizations with respect to the authority over amateur radio.

RACES, as I understand it, has authority under federal law for emergencies. Also RACES is a function of state and local government. And RACES can act during a disaster (first responce).

ARES is an a function of the ARRL and tends to deal with the aftermath of a disaster. It also has served agencies that it can support, if requested.

In my county, we do not have an active RACES organization. ARES is very strong but I gather has no authority other than MOU with served agencies.

Is this an accurate picture or am I missing something?

Topic: 2553 Message: 2553

My Packet station is back on the air.

145.050

KB9BVN-1 will get the PBBS, if you can call it that.

KB9BVN-2 will get you my node.

Connect and leave me a message, I just love to see the blinking message light. I may put a webcam up so I can watch the TNC from work...then I will know I have a message, and then via the power of the internet I can Webex with my Packet laptop and actually read my packet mail. Can it get any more nerdy than that?

Yes, yes it can.

2556. more electronics at Harbor Freight, 12 batt, batt chrgr, multi-meter.

Yahoo group: IndyHamRadio
Date: 2010-08-26 23:50:28 UTC
From: kc9brz
Topic: 2556 Message: 2556

Harbor freight deals for hams:

September 1 through Sept 23: Their cheapy digital multi-meter will be $4.
No coupon required.

Sept 9th through Sept 15th only: 5 watt solar battery charger
$30. Reg. $60. Requires a coupon in a flyer available now.

Now in the stores: a flyer with a coupon for a 12 volt jump-start and
power supply for $30. (regular $60). Has a 17 amp-hour battery
(claimed). The valid dates of the coupon will be only for Sept 23
through 27 inclusive. This item includes at least one cigarette
lighter socket. They won't have the flyer when the sale dates are
going on, so go beforehand to get the flyer to use then.

October 1 through 3 only: Automatic battery float charger $4. no coupon required.

Thanks for the Info and there is No reason a Ham should not have a Digital Multi-meter at this Price , I just dedicate them to use on My power supplies and Vehicle / Boat Etc

Some of the Hams at a Ham fest get nervous when You go to buy something and Bring out your little tester, They get worried you might actually know something Lol

Anyway I found out if You also see something on the Internet at their Site on sale the Store may not But You just print that page and they will honor it

Now in the stores: a flyer with a coupon for a 12 volt jump-start and
power supply for $30. (regular $60). Has a 17 amp-hour battery
(claimed). The valid dates of the coupon will be only for Sept 23
through 27 inclusive. This item includes at least one cigarette
lighter socket. They won't have the flyer when the sale dates are
going on, so go beforehand to get the flyer to use then.

October 1 through 3 only: Automatic battery float charger $4. no coupon
required.

2560. Looking for a Comm Shed

Yahoo group: IndyHamRadio
Date: 2010-08-31 19:15:39 UTC
From: Robert Griggs
Topic: 2560 Message: 2560

Everyone,

The Henry County Fire Fighters Association is looking for a Communications Shed/Building. We are working on a project to move the County Fire Repeater and Paging system to a 300 foot tower in the county from the 100 foot tower it is currently on.. It is currently housed at the Henry County Sheriff's Dept and the new location does not have a building we can use. We are have been unable to locate a building locally. Any help would be greatly appreciated.

Sounds like a "mission critical" type set-up.

I'm unfamiliar with that kind of set-up or even a "comm shed"
in general. So these questions are for my education:

Are you looking for a portable wood or steel building? Or for
plans for constructing a cement block building? Do you have
the budget for a custom-constructed cement block building? Would
a local contractor be willing to do it for cost? Could your
association do a fund raiser for it? Could you buy one from
a company that makes such sheds for cell towers? Does it need
to be air-conditioned in summer and heated in winter?

Hi Don,

Agreed! I DO buy some tools there that I will not likely use very much. For instance I bought an air powered socket wrench. I have only used it a couple of times when I had several bolt of the same size to tighten and loosen, but it was worth the amount I paid for that one use alone. If I get more use out of it, I consider it free! :-) With respect to the meter, it comes with a 9v battery, too. I had a dumb attack a while back and burned one of the 6 or 7 that I have, up. I took the battery out of it and through it away and still considered it a bargain, hi, hi.

Don,

Those dang cheap chinese meters won't do the one thing I need them to. I have been trying to figure out the resistance of my car battery so I can compensate for the internal voltage drop. When you're running QRP Mobile HF you need all the juice you can muster out of your batteries, but everytime I put my meter in Ohm mode, and then check the battery, the thing flashes for a second, I smell ozone, and then nuthin.

Glad they were only $2 each, I bet I went through a sack of them.

Here's a tip I learned at my Uncle's house down in West Virginia, if you keep blowing a fuse in the house box, don't use a penny in the socket. No sir. A Mountain Dew bottle cap pounded in there with a ball peen hammer works so much better, AND they don't cost nuthin!

Good tip on the meters Don, I'll head over and get a few more today. I need a new darksucker for my Mountain Dew cooler too, I bet I can find one there.

Have a great holiday weekend!

>...actually got a sale Paper today that Meter is $ 1.99...

I took a trip up north today and stopped in at the Harbor Freight in Kokomo. The meter in question (p/n 90899) was hanging on the rack with a price of $3.99. I grabbed three of them figuring that 12 bucks was a fair investment for having a few meters around. (I own three nice Fluke meters, one I keep at work, one is dead, and the other is still packed in an unknown box I haven't opened since my last move.) At the check-out, I told the girl that they were listed at $1.99 on Harbor Freight's web site. She scanned them and the price came up $1.99.

Brian, I've been wondering what the resistance of the electrical feed to my house might be. I think Hendricks Power is charging me for more juice then I actually get because of resistance in their darn wires. Do you think your technique for measuring the resistance of a car battery would work in my situation? I've been afraid of letting the smoke out of one of my meters, but if all you get is ozone, maybe that's OK. Since I'm measuring AC resistance, will I get the same kind of ozone?

Bob,

In cases like you are describing, I always follow the Homeowners Code, and leave it to the professionals.

I have heard that if you pull your meter and put it back in backwards, it'll look like you're actually generating power and in most cases you can start expecting a check FROM the power company every month. I thnk my neighbor must be doing that because he's always got extra money for smokes and lawn chemicals.

2572. ARRL September VHF QSO Party, 9/11 @ 1800 UTC - 9/13 @ 0300 UTC

Yahoo group: IndyHamRadio
Date: 2010-09-06 21:07:18 UTC
From: Mark Thompson
Topic: 2572 Message: 2572

http://www.arrl.org/september-vhf-qso-party

Full Contest Details

1. Object: To work as many amateur stations in as many different 2 degrees X 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.
2. Date and Contest Period: The second full weekend of September. Begins1800 UTC Saturday and ends 0300 UTC Monday (September 11-13, 2010).
3. Entry Categories:
3.1. Single Operator.
3.1.1. Low Power
3.1.2. High Power
3.2. Single Operator Portable.
3.3. Rover. A rover is comprised of no more than two operators that moves among two or more grid squares during the course of a contest. An operator may perform any or all rover functions, but a driver's function shall be limited to driving the vehicle. Drivers may be switched out during the event. Any number of observers is also allowed, however observers may not perform any rover function at any time. Rover vehicles with only one occupant are allowed to perform all functions listed above.
3.3.1. A rover vehicle may transport only one station using a single call sign. An exception is provided for in "General Rules for All ARRL Contests" number 3.5 (Family Rule).
3.3.2. A rover may not operate with more than one call sign.
3.3.3. Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site.
3.3.4. Rovers MUST sign "rover" on Phone and /R on CW and digital modes after their call sign.
3.3.5. All Rovers are encouraged to adopt operating practices that allow as many stations as possible to contact them.
3.3.6. Rover operators may submit separate logs for single operator (fixed station) in addition to their rover entries. Rovers submitting a score for inclusion in a club competition must also include a secondary summary sheet indicating the portion of the score that counts for the club score if any of the QSOs submitted take place outside of their club's territory.
3.3.7. Rovers are permitted to use APRS. Rovers using APRS transmit only their call sign and position. Any multi-op station may access rover APRS data directly or via the Internet.
3.3.8. A rover may not make more than 100 QSOs with any other one rover.
3.4. Limited Rover. Same as the “Rover” class above, but operation is permitted only on the 6 Meter, 2 Meter, 220 MHz and 432 MHz bands. Output power limits shall be the same as those defined for the Single Operator Low Power category.
3.5 Unlimited Rover. Same as “Rover” class above, but Unlimited Rovers may use more than two operators and are exempt from rules 3.3.3 and 3.3.8.

3.5.1. Unlimited Rover scores may NOT be applied to a club score for Club Competition. Please see “General Rules For All ARRL Contests Above 30 MHz” for more information on the Rover categories.
3.6. Multioperator:
3.6.1. Multioperator (Unlimited): Stations submit logs with more than four bands used.
3.6.2. Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)
4. Exchange: Grid-square locator (see April 1994 QST, p 86).
4.1. Exchange of grid square is required. Exchange of signal report is optional.
5. Scoring:
5.1. QSO points:
5.1.1. Count one point for each complete 50- or 144-MHz QSO.
5.1.2. Count two points for each 222- or 432-MHz QSO.
5.1.3. Count three points for each 902- or 1296-MHz QSO.
5.1.4. Count four points for each 2.3-GHz (or higher) QSO.
5.2. Multiplier: The total number of different grid squares worked per band. Each 2 degrees X 1 degree grid square counts as one multiplier on each band it is worked.
5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.
5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square activated (made a contact from).
5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.
5.4.2. Rovers who submit scores for the club competition must submit a separate summary sheet and log indicating QSOs and score if they make any contacts from outside of the club territory. The summary sheet should be clearly marked “for club competition only” and must be emailed separately to contests@...
6. Miscellaneous:
6.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).
6.2. Only one signal per band (6, 2, 1 1/4, etc) at any given time is permitted, regardless of mode.
6.3. Multioperator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.
7. Awards:
7.1. Certificates will be awarded in the following categories.
7.1.1. Top Single Operator High and Single Operator Low power in each ARRL/RAC Section.
7.1.2. Top Single Operator High and Single Operator Low power on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a

certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator low-power all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.
7.1.3. Top Single Operator Portable in each ARRL/RAC Section where significant effort or competition is evident. (Single Operator Portable entries are not eligible for single-band awards.)
7.1.4. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)
7.1.5. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)
Top limited multi-operator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multi-operator entries are not eligible for single-band awards.)
7.1.6. Top scoring club in each club competition category will be awarded a gavel.
See “General Rules for all ARRL Contests” for club competition information.
8. Submission:
8.1. All submissions must be emailed to SeptemberVHF@... or postmarked no later than 0300z Wednesday, October 13, 2010. Paper logs should be mailed to Sept VHF QSO Party, ARRL Contest Branch, 225 Main St, Newington, CT 06111. Logs mailed or emailed after the submission deadline may be designated as check logs.
8.2. Stations that use computers to log must send the electronic log in the Cabrillo file format for entry into the results. Submitted electronic files must be in ASCII / text readable format. A paper printout of an electronically created log is not an acceptable substitute for the required log file.
8.3. Electronically submitted entries are considered signed.
8.4. Logs may be submitted via the special web applet at www.b4h.net/cabforms
8.5. All paper entries must include a fully completed summary sheet and a complete log of the contacts made.
9. Other:
9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” November 2001 QST or at the Contest Branch Website at: http://www.arrl.org/contests
9.1.1 For queries contact contests@... or (860) 594-0295.

www.arrl.org/news/new-d-star-repeater-now-in-place-in-arrl-laboratory

New D-STAR Repeater Now in Place in ARRL Laboratory

09/02/2010

The ARRL Lab has installed a D-STAR (Digital Smart Technologies for Amateur Radio) repeater in the Lab at the ARRL Headquarters building. Operating with an output of 147.390 MHz, positive offset, the W1HQ D-STAR repeater is a local repeater with a modest footprint covering the Hartford-New Britain, Connecticut area. The antenna is on the roof of the Headquarters building with the repeater located in the Lab. With its gateway, the repeater is accessible to any D-STAR user on the planet. The Lab's call sign is W1INF.

"The purpose of the repeater is to better educate the Lab staff on D-STAR technology," explained ARRL Test

Engineer Bob Allison, WB1GCM. "In turn, we will have the ability to handle some of our members' questions on the matter. We also intend to use this new technology when emergencies occur where D-STAR technology is deployed."

In the near future, the W1HQ D-STAR system will also include 70 and 23 cm repeaters, as well as a 23 cm high speed data link, once initial frequency coordination is granted. "We're especially interested in the high speed data link," Allison said. "Though it will have a limited range, we can begin experimenting with its potential and use it as a training tool for Lab staff."

Allison thanked Bill Unghire, N1CNV, for his contributions as the major motivator for the ARRL HQ D-STAR project. "Bill, an ARRL Life Member, also provided valuable IT support with setting up the gateway," he said. Building Manager Greg Kwasowski, W1GJK, handled the installation of all of the hardware, and Allison and W1AW Station Manager Joe Carcia, NJ1Q, handled the testing and coordination efforts. "Try giving the Lab a call -- during our noon lunch break, of course," Allison invited.

Story: Amateur Radio Operators Provide Vital Communications Links Between Red Cross Shelters During Hurricane Earl

This post is written by American Red Cross disaster volunteer Allen Crabtree.

Friday, September 3. 2010 ☐ HYANNIS, MA ☐ "K1PBO, this is W2BTA with the shelter status report from the Nantucket shelter."

Amateur Radio Technician Wini Lord Meservey was on duty at the communications room crowded with radios and computers in the basement of the American Red Cross Cape Cod Chapter in Hyannis, MA. She returned the radio call from the amateur radio operator located at the Red Cross shelters on Nantucket Island, one of many regional shelters opened in response to Hurricane Earl.

"W2BTA, this is K1PBO. I copy you," Meservey replied. "Go ahead with your shelter report."

One by one, each of the stations at the Red Cross shelters checked in with the count of residents and tourists who had sought shelter from Hurricane Earl. This information, along with current weather and reports of flooding, was gathered and then passed along to the Red Cross as well as the Emergency Operations Center and the nearby military base.

"Amateur radio provides communications to support the disaster relief efforts of the American Red Cross," said Frank O'Laughlin (WQ1O). "When all other forms of communications go out, we are still on the air to keep vital emergency links open. This is particularly important here at the Cape. We are vulnerable here on our peninsula and on Nantucket and Martha's Vineyard to storms and power outages."

O'Laughlin is the Director of the local Amateur Radio Emergency Service (ARES ☐ pronounced A-Rees) and is a veteran ham radio operator and trained Red Cross volunteer with twenty years' experience. ARES is a program of the Amateur Radio Relay League (ARRL) that provides point to point communications between shelters, assists in recovery efforts, provides weather reports in weather disasters and sends messages where normal communications have failed or are overloaded.

"The ARRL operates under a Memorandum of Understanding with the American Red Cross," said Keith Robertory, Manager for Disaster Technology at the American Red Cross. "The hams are all volunteers and many of them are also trained Red Cross volunteers. They are our `force on the ground' that respond when there is a disaster anywhere in the country."

ARES has been supporting Red Cross disaster relief operations for a very long time and will celebrate its 75th anniversary this month. "We have been working with the Red Cross long before there were cell phones," said Alan Pitts of the ARRL. "When the Internet, the cell phones and the electricity go out, they call on us, the hams, to get the job done."

Effective disaster relief operations rely on a number of different skills and trained volunteers, and the dedicated ham radio operators of ARES play an invaluable key role in Red Cross emergency service delivery around the country, wherever disasters occur. Frank O'Laughlin and his crew of 35 committed amateur radio operators on Cape Cod expertly filled that role during Hurricane Earl, and when the next disaster strikes they are trained and ready to respond whenever called upon.

Greg,

Thanks for sending that information & good to
hear about amateur radio support of ARC.

Going back a few years in Fort Wayne I was called
in from Whitley County by the Red Cross to assist
with the big Fort Wayne tire fire that caused a
evacuation of citizens from the certain area.

They wanted me to fill in on the 3rd shift.

Upon my arrival at the Red Cross office they were
spelling out my instructions - but all of a sudden
2 hams came out of the next office stating hey
they needed a relief! So in the end I used both ham
radio & Red Cross radio equipment to coordinate
evacuations to the coliseum area.

The Red Cross transportation units would radio to
me how many were leaving the evacuation area so
I in turn would notify others how many bunks and
blankets along with other supplies were needed.
Then on the next order of business I would call a
ham at the coliseum to advise how many were
coming so additional space could be organized
by the Red Cross workers at that site.

Fortunately many evacuees had family, relatives
or other friends to stay with during this event. So
that helped to keep the coliseum occupation down
in numbers.

That fire coupled with all the water being sprayed
on the tires also flooded the police department
records that were stored in their basement.

I forget the approximate number of tires that
went up in smoke but it was quite a large amount.

Don /KA9QWC

2578. High Altitude Balloon Launch

Yahoo group: IndyHamRadio
Date: 2010-09-15 00:50:17 UTC
From: KB9BVN
Topic: 2578 Message: 2578

QRP ARCI is pleased to announce their sponsorship of the Iowa High Altitude Balloon (iHAB) project. This sponsorship is for the second launch by iHAB. This launch will provide improvements over their first launch to include better APRS tracking, an improved 20 meter beacon and better camera clarity.

The launch is scheduled for October 2, 2010 at 14:00Z (9AM CDT) from the Ottumwa Industrial Airport (OTM) IHCC North Campus Aviation Building. Preflight will begin at 13:00Z (8AM CDT). Should weather prevent the launch, the fall back date will be Saturday, October 9, 2010 at the same times.

The QRP Beacon (1.6 watts) will be on 14.059.0 MHz signing (the QRP ARCI Club call sign) "K6JSS iHAB 2"

Please go to http://www.qrparci.org/ for more information on the flight and special recognition for reception reports.

http://www.svhfs.org/sprints.html

SVHFS Sprints
The Southeastern VHF Society sponsors Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.
The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such. In no case will there be more than 1 radio operator at one time. A second person can not serve as a “spotter” while the first operates. Operating categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress the activity into a shorter time span. While the rules for Sprints vary by year, we are always open to suggestions on how to improve them for the future. If you have an idea on how to make the Fall Sprints better for next year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help out. This year, as a result of several requests, we will be using 6 character grid squares for 432 and microwave.
Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest now. This will allow computer programs to both generate the logs and check the logs. Rover scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference the Southeastern VHF Society sponsors, please watch this website

2010 Sprints Schedule Summary
* 144 MHz - Monday, September 20, 7 pm to 11 pm local time
* 222 MHz - Tuesday, September 28, 7 pm to 11 pm local time
* 432 MHz - Wednesday, October 6, 7 pm top 11 pm local time
* Microwave - Saturday, October 16, 6 am to 12 pm local time
* 50 MHz - 2300 UTC Saturday, October 30 to 0300 UTC Sunday, October 31.
 Introducing the 2010 Fall VHF/UHF Sprints:The Southeastern VHF Society is again sponsoring the Fall VHF/UHF
Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.This year we are using 6 digit grid squares on 432MHz and Microwave, as many have requested this.The contest is intended for single operator, single transmitter entries. However, if one wishes to
introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the

contest reserve the
right to allow such entries, if identified as such. In no case will there be more than 1 radio operator
at one time. A second person can not serve as a “spotter” while the first operates. Operating
categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are
held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress
the activity into a shorter time span.
At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the
Sprints please contact the Fall Sprints Chairman Bruce Randall WD4JQV.
WD4JQV@....
While the rules for the Fall Sprints are set for 2010, we are always open to suggestions on how to
improve them for the future. If you have an idea on how to make the Fall Sprints better for next
year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help
out.Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest
now.
scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at This will allow computer programs to both generate the logs and check the logs.

fallsprints@...
2010 Fall Sprint Chairman2010 Fall VHF/UHF Sprint Rules:
1. Object:
using authorized amateur frequencies on the 50, 144, 222, 432 MHz and Microwave (902 MHz and
above) bands during the contest periods.To work as many amateur stations in as many 2 X 1 degree grid squares as possible,2. Contest Period:2.1 The 144 MHz Sprint will be from 7 PM to 11 PM local time on Monday September 20, 2010.LOG is due by October 20, 2010.2.2 The 222 MHz Sprint will be from 7 PM to 11 PM local time on Tuesday September 28, 2010.LOG is due by October 28, 2010.2.3 The 432 MHz Sprint will be from 7 PM to 11 PM local time on Wednesday October 6, 2010.LOG is due by November 6, 2010. Exchange is 6 Digit Grid Square !!2.4 The

Saturday October 16, 2010. The Microwave Sprint is one Sprint and certificates will be awarded
for highest total score. See section 4. below for scoring.Microwave (902 MHz and above) Sprint will be from 6 AM to 12 PM local time onLOG is due by November 16, 2010. Exchange is 6 Digit Grid Square !!2.5 The

October 31, 2010.50 MHz Sprint starts 2300 UTC Saturday, October 30, 2010 and ends 0300 UTC Sunday,LOG is due by November 30, 2010.
3. Exchange:
require all 6 characters of the grid square. Such as EM94LV
4. Scoring:Call signs and Grid-square locator. Signal report optional. 432MHz and microwave4.1 QSO Points:
4.1.1. Count 1 point for each complete 50- or 144-MHz QSO.
4.1.2. Count 2 points for each 222- or 432-MHz QSO.
4.1.3. Count 3 points for each 902- or 1296-MHz QSO.
4.1.4. Count 4 points for each 2.3-GHz (or higher) QSO.
4.2 Multiplier: The total number of grid squares worked. Each 2 X 1 degree grid square worked
counts as one multiplier.
4.3 Final Score (Except Microwave): Multiply QSO points by multipliers. Each sprint is scored
separately. ARRL June 2010 VHF contest scoring software will produce the correct score.4.4 Rovers Score: Each grid activated is scored separately as if the station was a normal single
operator in that grid. Please separate logs for each grid activated. The final score is the sum of the
scores for the individual grids activated.
ARRL scoring software will NOT work.More than one grid must be activated to be a rover!4.5 Microwave Final Score: Count 3 QSO point for each complete 902 or 1296 MHz QSO. Count 4
QSO points for each 2.3 GHz (or higher) QSO. Add up the QSO points for all bands and then
multiply this total by the total number of multipliers. A grid worked on more than one band counts
as a new multiplier on each band. For example: EM94 worked on 902, 1296 and 2304 MHz is 3
multipliers
5. Reporting:
Only submitted logs are eligible for awards. Logs must be in ARRL format (log sheets and
summary sheet as used for ARRL VHF contests) to be accepted, and must show current address to
be eligible for awards. Electronic submissions in ARRL acceptable electronic format may be
mailed on diskette or e-mailed with log file as an ATTACHMENT only (Not in the body of
e-mail). Subject line of e-mail must contain “2010 Fall Sprint”. In e-mail addresses below (at) is
really an @ sign.
5.1 144 MHz Sprint logs to:
Ott Fiebel W4WSR, PO Box 957, Hayesville, NC 28904 ottf(at)wbia.net
5.2 222 MHz Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net
5.3 432 MHz Spring logs to:
Jim Worsham W4KXY, 1915 Oak Wind Lane, Buford, GA 30519-6766 w4kxy(at)arrl.net
5.4 Microwave Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net

5.5 50 MHz Sprint logs to:
Ray Rector WA4NJP, 3493 Holly Springs Rd, Gillsville, GA 30534
wa4njp(at)bellsouth.net
6. Certificates for top three Single Op finishers in each sprint and top three Rovers in each sprint if
sufficient Rover competition is shown. Certificates to be awarded at the Southeastern VHF Society
banquet.
7.
the contest is acceptable. The telephone, packet or internet channel will not be used while the
contact is in progress. No “OK I am hearing you now.” over the alternate channel. The alternate
channel will not be available in any way to the operator during the contact. The complete exchange
of call signs and grids must be accomplished on the relevant amateur radio band. All other bands
must use only amateur radio communications for scheduling during the contest.
The Fall Sprints are sponsored by the Southeastern VHF Society.. ARRL June 2010 VHF contest scoring software will produce the correct score.Logs must be submitted no later than 30 days after the closing date of the each event.For Microwave only: Use of telephone, packet or internet methods to schedule contacts duringPlease visit www.svhfs.org for any updates.

2582. For Sale: Rare Yaesu FT-650 Xcvr

Yahoo group: IndyHamRadio
Date: 2010-09-16 21:46:24 UTC
From: Mark Thompson
Topic: 2582 Message: 2582
Attachments: 2 described; binary payloads are missing from this source WARC

FOR SALE: Rare Yaesu FT-650

Tri-band (6m/10m/12m) 100-watt AM/FM/SSB/CW base transceiver.

Fantastic for 6m & 10m DXing & Contesting.
In excellent condition & perfect working order.
Continuous transmit 24 – 60 MHz enabled.

QST FT-650 Review & Picture attached.

More FT-650 reviews at:
http://www.eham.net/reviews/review/4931
http://rigreference.com/rigs/reviews/4313
http://www.eham.net/reviews/detail/1047

Original selling price was $1,599 ($2,534 adjusted for inflation).

FT-650s are highly sought after, especially by 6m enthusiasts and
typically sell for well over $1,000 so make a reasonable offer if interested.

(HC-4 DX element replaced with HC-5 Rag Chew element)
with following accessories:

- SM-1 Shock Mount ($72)
- CB-1 Classic Base Stand ($70)
- FS-2 Foot Switch ($38)
- CC-1 Y Adapter Cable ($35)

I've listed the current Heil retail prices for each of the above items totaling
$360.
All the Heil mic items are like new and if interested make a reasonable offer
for complete set.

I would prefer a local sale without shipping so I'm announcing it locally before
I list it on
eHam.net, QRZ.com & QTH.com.

Since I live in the Chicago area I could potentially meet somewhere

in Northeast Illinois or possibly Southeast or South Central Wisconsin.

I plan to be at two hamfests in Illinois in September.

I will be at the Peoria Superfest on Saturday, September 18th and

Radio Expo in Belvidere, IL on Saturday, September 25th.

If interested please send me an email off-list at: wb9qzb_groups@....

I can also be reached at: 847-867-2774 . I also have for sale a Heil GM Microphone ($145)

73, Mark, WB9QZB

2583. Hurricane News

Yahoo group: IndyHamRadio
Date: 2010-09-16 23:16:11 UTC
From: KB9BVN
Topic: 2583 Message: 2583

From the WorldRadio Online Newsroom...

WX4NHC, the Amateur Radio station at the National Hurricane Center in Miami, has asked us to alert amateurs that it will be monitoring its HF and EchoLink/IRLP station later today and early tomorrow, September 17, as Hurricane Karl approaches the coast of Mexico. As of Thursday afternoon, Karl was a Category 1 storm on the Saffir-Simpson scale, but it was expected to strengthen before making landfall.

The following is from WX4NHC:
We request all land based stations as well as ships at sea in the areas affected to send us weather data (measured or estimated) and damage reports. Please do not venture outside during the hurricane to gather weather data. Your safety is the first priority.
There are many constantly changing atmospheric variables that affect the storm's track and strength.

Please refer to the National Hurricane Center Advisories for official information. www.nhc.noaa.gov
EchoLink "WX-Talk" Conference Room and IRLP node 9219 will be monitored. www.voipwx.net

WX4NHC will also monitor CWOP, APRS and MADIS/MESONET Automated weather stations in the affected area.

Surface Reports using our On-line Hurricane Report form will be monitored.

Amateur Weather Enthusiasts and ON-NHC Volunteers may report directly to WX4NHC on-line.

http://www.wx4nhc.org/WX-form1.html

ON-NHC Volunteers are both Ham Radio Operators and Non-Ham weather observers that use their own weather instruments to submit "Surface Reports" directly to NHC over the Internet via the WX4NHC on-line report form. These "Surface Reports" are very important as they give Hurricane Specialists at NHC a better idea of what is actually happening on the ground level during the storm.

For more information on these programs, see the WX4NHC Group website at www.wx4nhc.org

2584. Hurricane Update

Yahoo group: IndyHamRadio
Date: 2010-09-17 16:06:34 UTC
From: Brian Murrey
Topic: 2584 Message: 2584

From the WorldRadio Online Newsroom...

Hurricane Karl is coming onshore in Mexico today as a Category 3 hurricane, packing top winds of 120 miles per hour. The Mexican Emergency Net is operating on 7065 kHz. All stations not involved in passing hurricane-related traffic are requested to keep that frequency clear, according to IARU Caribbean area Emergency Coordinator Arnie Coro, CO2KK. In addition, WX4NHC at the National Hurricane Center announced yesterday that it would be monitoring HF and Echolink as the storm progressed. The HF frequency was not included. WX4NHC primarily monitors the Hurricane Watch Net frequency of 14.325 MHz +/- QRM. As of 1645 UTC today (17 Sept), however, the HWN was not active and it was not clear whether WX4NHC was still monitoring.

2585. Ham Camp! Come one, come all!

Yahoo group: IndyHamRadio
Date: 2010-09-18 00:21:13 UTC
From: KB9BVN
Topic: 2585 Message: 2585

I am sending this on behalf of Rick N9GSU and his wife Holly KC9SPT, if you are in or near Indiana, you won't want to miss this.

Hello everyone! Rick, N9GSU and Holly, KC9SPT here.

A few of us have been kicking out the idea of a ham radio campout this fall, a time to just hang out, maybe throw some wires up in trees, build a campfire, have a pitch in, etc...And it's going to be happening, and you're invited. It'll be Friday night, Oct 15th, through Sunday, Oct 17th.

You can come for all, or part of the weekend. Not fond of camping? We'll be having a pitch in/cookout on Saturday night at 5:00PM.just come and share in the meal with us! We'll be camping at the American Legion Park and Campground in Fortville, Indiana, on State Road 13, 3 miles south of I-69.

Directions from Indy: Take I-69 North to Exit 14 (Fortville, SR 13), go south for 3 miles and turn right on to the park road.

Directions from Ohio: Take I-70 West to I465 North. Then take I-69 North to Exit 14 (Fortville, SR 13), go south for 3 miles and turn right on to the park road.

Directions from Michigan: Take I-69 South to Exit 14 (Fortville, SR 13), go south for 3 miles and turn right on to the park road.

If you're tent camping, there is NO CHARGE for camping! (Thank you, American Legion, for making this happen!!) If you're RV camping and want electricity, it's a VERY reasonable $10.00/night. For the Pitch In, we've reserved the park shelter. We'll be having a 50/50 drawing to help cover the cost of the shelter, and...perhaps, even a raffle or two. If anyone is interested in donating a raffle prize, please let one of us know!

If you've got questions, feel free to email me (IndyRick@...) or Holly (Hollyjae@...), or feel free to call me at 317-213-1193.

I'll also be making a facebook event page for this, for any of you who are on Facebook. Search on FB for "Ham Camp"

Here's hoping this event will be a great success......just a time of fellowship and recreation among fellow hams!

I couldn't find an exact street address, so using Google maps,
I figgered out that the American Legion Park entrance is _exactly_
3.0 miles South of I-69, starting at the end of the I-69
northbound exit ramp.

For GPS users, since there is no "exact" street/road address,
the entrance is at: Lattitude 39.9499, and Longitude -85.8435.

And here's the maps.google.com link, for a pitcher:

Dinner for Oct 9 2010
will be at
Squealers Barbeque
5515 W. 86th Street Indianapolis, Indiana
Corner of 86th & Zionville Road
It will be that 700 PM
I told them we will have about 40 people so let's try to top that.
All is welcome.

2591. review of Harbor Freight 12V power supply and jumps start.

Yahoo group: IndyHamRadio
Date: 2010-09-24 03:15:36 UTC
From: kc9brz
Topic: 2591 Message: 2591

This is the item I wrote about a couple weeks back.

Harbor Freight, item # 38391.

http://www.harborfreight.com/automotive-motorcycle/battery/12-volt-jump-start-and-power-supply-38391.html

Regular (and current) shelf price in store is $59.99.
Today's online price is $29.99.

Today's coupon price for purchase in store, is $29.99, which is what I just paid using a coupon from a flyer that I picked up in the store a couple weeks ago.

If you didn't pick up a coupon/flyer on a previous visit, they might give you the online price if you grovel sufficiently.

This looks like a deal, since it includes a 12 volt 17 amp-hour lead-acid battery. It's too heavy to take back-packing or hiking to power your radio, but it's light enough to easily lug from house to back-yard or from the car to field day.

There is only one cigarette lighter socket to power your radios, but you could also use the built-in #4 gauge jumper cables to deliver power to a power strip. Booster cables are only 17". The higher model, #8884, has 25" cables (plus an air compressor), but the same 17 AH battery, and costs $69.99 list price in store, $59.99 online.

One cool thing I like about the one I just bought (#38391), versus a more expensive brand from Fry's that I bought for my car, is that the "wall wart" (transformer) part of the AC adaptor is built into the unit. You only have to run a simple AC cord from wall to the unit. You could probably use a generic household 2-wire extension cord if you lose this cord. There is also a cigarette lighter adaptor to recharge the unit from your car.

Manual says it has 400 amps, and 900 peak amps.

Compare this to a 12-V 17-AH battery (gell cell or lead/acid) from Batteries Plus, and it looks like a real deal.

I envision using this for mobile HF or mobile VHF/UHF use. And I can still see myself getting a smaller gell-cell light enough to carry on a utility belt while hiking to power and HT all day.

I guess the real test is how long it will last, and how many charge/discharge cycles it will last.

Brian, you inspired this purchase with your photo of you operating a QRP rig from a picnic table powered by a portable battery pack.

KC9BRZ de KB9BVN

I have been using one of those jump start devices to power my QRP HF rigs for a decade. The one I am currently using is about 7 years old. I lost the charger a long time ago, so I just plug in my bench supply set to 13 vdc and turn the current down to about 500 mA and leave it connected for about three hours. Not the best way to charge this thing, but in a pinch it will work. I think the wall wart it came with was rated at 12.5 VDC at 100 mA.

I have a couple of plugs that I use in the socket that essentially give me two female sockets so I can run the radio, and my little auto antenna tuner as well. My tuner is a LDG and uses latching relays so it consumes no power once it is tuned for the band I am using.

High Altitude Balloon Launch
Posted by: "KB9BVN" kb9bvn@... kb9bvn
Date: Tue Sep 14, 2010 5:50 pm ((PDT))

QRP ARCI is pleased to announce their sponsorship of the Iowa High Altitude Balloon (iHAB) project. This sponsorship is for the second launch by iHAB. This launch will provide improvements over their first launch to include better APRS tracking, an improved 20 meter beacon and better camera clarity.

The launch is scheduled for October 2, 2010 at 14:00Z (9AM CDT) from the Ottumwa Industrial Airport (OTM) IHCC North Campus Aviation Building. Preflight will begin at 13:00Z (8AM CDT). Should weather prevent the launch, the fall back date will be Saturday, October 9, 2010 at the same times.

The QRP Beacon (1.6 watts) will be on 14.059.0 MHz signing (the QRP ARCI Club call sign) "K6JSS iHAB 2"

Please go to http://www.qrparci.org/ for more information on the flight and special recognition for reception reports.

2595. Using D-STAR for ARES SET

Yahoo group: IndyHamRadio
Date: 2010-10-02 02:34:22 UTC
From: Mark Thompson
Topic: 2595 Message: 2595
Attachments: 4 described; binary payloads are missing from this source WARC

Georgia is using D-STAR for the ARES SET. See attached message.

Both Illinois & Wisconsin each have a network of interconnected D-STAR repeaters

that cover most of the population of each state. Each state has a weekly D-STAR net
that uses a reflector to connect all D-STAR repeaters in the state together.

D-STAR has several capabilities that would be very useful for ARES & EmComm activities.

----- Forwarded Message ----
From: WB4QDX <wb4qdx@...>
To: ga_dstar@yahoogroups.com
Sent: Fri, October 1, 2010 12:27:49 PM
Subject: [ga_dstar] ARES SET Information

For stations in Georgia participating in the ARES Simulated Emergency Test (SET)

on Saturday, REF002A will be used for D-STAR voice traffic. This will be an open regional net with no Net Control so please observe good net operating procedures during the day. Local repeaters may link to REF002A for the Net, but

please keep non-exercise traffic off of the Net. The Georgia SOC will be operating D-STAR voice on REF002A as WX4GMA.

REF030B will be dedicated to D-RATS traffic. The GEMA State Operations Center (SOC) has confirmed that they will be monitoring D-RATS on REF030B as WX4GMA. Please limit activity on REF030B or any repeaters linked to the reflector to D-RATS traffic.

Anyone operating D-RATS with only Internet capability (no radio connection) may connect their local D-RATS client to gtworks.dyndns.org:9000. This will link to

REF030B through WD4STR C.

John WB4QDX

2596. iHAB is off!

Yahoo group: IndyHamRadio

2599. 432 MHz Fall Sprint, Wednesday, 10/6, 7 -11 pm Local Time

Yahoo group: IndyHamRadio
Date: 2010-10-04 04:43:56 UTC
From: Mark Thompson
Topic: 2599 Message: 2599
Attachments: 2 described; binary payloads are missing from this source WARC

http://www.svhfs.org/sprints.html

SVHFS Sprints
The Southeastern VHF Society sponsors Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.
The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such. In no case will there be more than 1 radio operator at one time. A second person can not serve as a “spotter” while the first operates. Operating categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress the activity into a shorter time span. While the rules for Sprints vary by year, we are always open to suggestions on how to improve them for the future. If you have an idea on how to make the Fall Sprints better for next year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help out. This year, as a result of several requests, we will be using 6 character grid squares for 432 and microwave.
Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest now. This will allow computer programs to both generate the logs and check the logs. Rover scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference the Southeastern VHF Society sponsors, please watch this website

2010 Sprints Schedule Summary
* 144 MHz - Monday, September 20, 7 pm to 11 pm local time
* 222 MHz - Tuesday, September 28, 7 pm to 11 pm local time
* 432 MHz - Wednesday, October 6, 7 pm top 11 pm local time
* Microwave - Saturday, October 16, 6 am to 12 pm local time
* 50 MHz - 2300 UTC Saturday, October 30 to 0300 UTC Sunday, October 31.

Introducing the 2010 Fall VHF/UHF Sprints:The Southeastern VHF Society is again sponsoring the Fall VHF/UHF
Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.
This year we are using 6 digit grid squares on 432MHz and Microwave, as many have
requested this.The contest is intended for single operator, single transmitter entries. However, if one wishes to

introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the
right to allow such entries, if identified as such. In no case will there be more than 1 radio operator
at one time. A second person can not serve as a “spotter” while the first operates. Operating
categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are
held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress
the activity into a shorter time span.
At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the
Sprints please contact the Fall Sprints Chairman Bruce Randall WD4JQV.
WD4JQV@....
While the rules for the Fall Sprints are set for 2010, we are always open to suggestions on how to
improve them for the future. If you have an idea on how to make the Fall Sprints better for next
year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help
out.
Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest
now. This will allow computer programs to both generate the logs and check the logs. Rover
scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at
www.svhfs.org73, have fun, and good luck!
Bruce Randall WD4JQV
fallsprints@...
2010 Fall Sprint Chairman
2010 Fall VHF/UHF Sprint Rules:
1. Object: To work as many amateur stations in as many 2 X 1 degree grid squares as possible,
using authorized amateur frequencies on the 50, 144, 222, 432 MHz and Microwave (902 MHz and
above) bands during the contest periods.
2. Contest Period:
2.1 The 144 MHz Sprint will be from 7 PM to 11 PM local time on Monday September 20, 2010.
LOG is due by October 20, 2010.
2.2 The 222 MHz Sprint will be from 7 PM to 11 PM local time on Tuesday September 28, 2010.
LOG is due by October 28, 2010.
2.3 The 432 MHz Sprint will be from 7 PM to 11 PM local time on Wednesday October 6, 2010.

LOG is due by November 6, 2010. Exchange is 6 Digit Grid Square !!
2.4 The Microwave (902 MHz and above) Sprint will be from 6 AM to 12 PM local time on
Saturday October 16, 2010. The Microwave Sprint is one Sprint and certificates will be awarded
for highest total score. See section 4. below for scoring.
LOG is due by November 16, 2010. Exchange is 6 Digit Grid Square !!
2.5 The 50 MHz Sprint starts 2300 UTC Saturday, October 30, 2010 and ends 0300 UTC Sunday,
October 31, 2010.
LOG is due by November 30, 2010.
3. Exchange: Call signs and Grid-square locator. Signal report optional. 432MHz and microwave
require all 6 characters of the grid square. Such as EM94LV
4. Scoring:
4.1 QSO Points:
4.1.1. Count 1 point for each complete 50- or 144-MHz QSO.
4.1.2. Count 2 points for each 222- or 432-MHz QSO.
4.1.3. Count 3 points for each 902- or 1296-MHz QSO.
4.1.4. Count 4 points for each 2.3-GHz (or higher) QSO.
4.2 Multiplier: The total number of grid squares worked. Each 2 X 1 degree grid square worked
counts as one multiplier.
4.3 Final Score (Except Microwave): Multiply QSO points by multipliers. Each sprint is scored
separately. ARRL June 2010 VHF contest scoring software will produce the correct score.
4.4 Rovers Score: Each grid activated is scored separately as if the station was a normal single
operator in that grid. Please separate logs for each grid activated. The final score is the sum of the
scores for the individual grids activated. More than one grid must be activated to be a rover!
ARRL scoring software will NOT work.
4.5 Microwave Final Score: Count 3 QSO point for each complete 902 or 1296 MHz QSO. Count 4
QSO points for each 2.3 GHz (or higher) QSO. Add up the QSO points for all bands and then
multiply this total by the total number of multipliers. A grid worked on more than one band counts
as a new multiplier on each band. For example: EM94 worked on 902, 1296 and 2304 MHz is 3
multipliers. ARRL June 2010 VHF contest scoring software will produce the correct score.
5. Reporting: Logs must be submitted no later than 30 days after the closing date of the each event.
Only submitted logs are eligible for awards. Logs must be in ARRL format (log sheets and
summary sheet as used for ARRL VHF contests) to be accepted, and must show current address to

be eligible for awards. Electronic submissions in ARRL acceptable electronic format may be
mailed on diskette or e-mailed with log file as an ATTACHMENT only (Not in the body of
e-mail). Subject line of e-mail must contain “2010 Fall Sprint”. In e-mail addresses below (at) is
really an @ sign.
5.1 144 MHz Sprint logs to:
Ott Fiebel W4WSR, PO Box 957, Hayesville, NC 28904 ottf(at)wbia.net
5.2 222 MHz Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net
5.3 432 MHz Spring logs to:
Jim Worsham W4KXY, 1915 Oak Wind Lane, Buford, GA 30519-6766 w4kxy(at)arrl.net
5.4 Microwave Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net
5.5 50 MHz Sprint logs to:
Ray Rector WA4NJP, 3493 Holly Springs Rd, Gillsville, GA 30534 wa4njp(at)bellsouth.net
6. Certificates for top three Single Op finishers in each sprint and top three Rovers in each sprint if
sufficient Rover competition is shown. Certificates to be awarded at the Southeastern VHF Society
banquet.
7. For Microwave only: Use of telephone, packet or internet methods to schedule contacts during
the contest is acceptable. The telephone, packet or internet channel will not be used while the
contact is in progress. No “OK I am hearing you now.” over the alternate channel. The alternate
channel will not be available in any way to the operator during the contact. The complete exchange
of call signs and grids must be accomplished on the relevant amateur radio band. All other bands
must use only amateur radio communications for scheduling during the contest.
The Fall Sprints are sponsored by the Southeastern VHF Society.Please visit www.svhfs.org for any updates.

Date: Sun, 3 Oct 2010 22:07:40 GMT
From: "uco@..." <uco@...>
Subject: MAMSAT SYMPOSIUM THIS WEEK - CHICAGO
To:

ARISSat-1 will be the presented in detail during the Saturday morning sessions
at the AMSAT 2010 Space Symposium and Annual Meeting which will be held on
Friday, October 8 through Sunday, October 10.

AMSAT Vice-President of Engineering Tony Montiero, AA2TX and ARISSat Project
Manager Gould Smith, WA4SXM along with ARISSat team members will host the
Saturday ARRISat-1 sessions including:

* ARISSat-1 Overview
* Software Radio Technology
* BPSK-1000 format for ARISSat-1
* ARISSatTLM - Software Demodulator and Telemetry Program
* Calculating Available Power (Examples: ARISSat & Fox)
* Power System
* Assembling ARISSat-1
* ARISSat-1 Vibration Testing

The team plans to have a working ARISSat-1 prototype attending the Symposium.

ARISSat-1 design and operations are discussed in detail in these papers
published in the 2010 Symposium Proceedings book:

* ARISSat-1 Overview by Tony Monteiro AA2TX
* ARISSat-1 Power System by Tony Monteiro AA2TX
* Software Radio Technology on ARISSat-1 by Tony Montiero AA2TX
* ARISSatTLM - A Software Demodulator and Telemetry Display Program for the
ARISSat-1 Satellite by Douglas Quagliana KA2UPW
* BPSK-1000 format for ARISSat-1 by Phil Karn KA9Q

An additional feature presentation and paper will introduce you to AMSAT's
next satellite ... AMSAT-FOX Preview by Tony Monteiro, AA2TX.

The AMSAT 2010 Space Symposium and Annual General Meeting will be held at the
Chicago/Elk Grove Holiday Inn which is near O'Hare Airport.

On-line registration for the Symposium continues on-line at the AMSAT Store.
The registration fee is $45.00 from now through 5 October. Online registration

closes 5 October at Midnight. Registration at the door will be $50.00.

2604. Ham Camp Update

Yahoo group: IndyHamRadio
Date: 2010-10-14 15:57:25 UTC
From: Brian Murrey
Topic: 2604 Message: 2604

Calling all Hams! Calling all Hams!

Ham Camp begins on Friday the 16th at 5PM at the most excellent American Legion Park in Fortville Indiana.

Take I 69 north, to SR 13, go south exactly 3 miles and turn right, into the park.

Tent camping is free, RV camping is free, electricity is $10 per night.

Saturday afternoon at 5PM is the big pitch in dinner, everyone is invited.

Bring some food to share, your own lawn chairs, your own drinks, and prepare to be amazed by all the fun we'll have.

During Ham Camp on Saturday, the Jamboree on the Air will be taking place, Boy and Girl Scouts all over North America will be
visiting ham stations and making contacts. We will have numerous stations on the air at Ham Camp, HF, VHF, and UHF
plus an untold number of antennas. CW, SSB and other modes will be available.

Also the QRP ARCI QSO Party is this weekend, come and see the crazy QRP guys working their bugs, keys, and paddles,
while they try to set new distance records and make contacts all over. Who can get Worked All States first?

If you can come for the whole thing, GREAT. If you can only come for part of it, GREAT. You won't want to be hearing the
tales of Ham Camp on the repeater come Monday morning when you could have been there with us, living the DREAM!

2605. Jamboree On The Air

Yahoo group: IndyHamRadio
Date: 2010-10-14 19:05:50 UTC
From: Brian Murrey
Topic: 2605 Message: 2605

The 53rd Annual Jamboree on the Air (JOTA) will once again provide an opportunity for Scouts to get on the air and get a taste of the fun and magic of radio. JOTA is an international scouting event organized by the World Scouting Bureau. While JOTA officially starts at 12 midnight local time Friday night/Saturday morning and goes until midnight Sunday local time, there will be plenty of stations on the air Friday evening. The official Scouting frequencies will be the center of operations. A listing of those frequencies, information about third party traffic restrictions and other details can be found on the ARRL Web site or on the World Scouting site. Each JOTA event provides an opportunity for a local club or Scout troop to get something started that can result in the beginning of a tradition of fun-filled activities. JOTA takes place starting Saturday at midnight local time, Saturday, October 16 and goes to 11.59 PM local time on Sunday, October 17. Some activity continues over from Friday to Monday to take advantage of long distance (DX) time differences.

Yahoo group: IndyHamRadio
Date: 2010-10-18 15:17:21 UTC
From: N9MEW (Chas)
Topic: 2608 Message: 2608

Attention all repeater Trustees

The Indiana Repeater council will meet at the Ft. Wayne Hamfest on Saturday, November 13th Check at the Hamfest for the time.

All are welcome.

We will be talking about paper repeaters and what to do about them, similar to the Fall meeting last November, in Ft. Wayne.

We will move the delete date from the ARRL directory from 2005 to 2008. (In other words, the oldest date will be 2008 to be published.

The object is to get everybody current with their coordination, so that we know who to de-coordinate. Several systems were voluntarily de-coordinated last winter.

In July, we held election of officers and Tony Langer, W9AL is chairman, Dan Dahms, N9WNH is Vice Chairman. Walt and I will continue as Coordinators. We also have several assistants.

Is your coordination up to date? If not, please file an application via our web site www.ircinc.org/node/9

I will be contacting trustees that are not current.

---

looking forward to meeting you,

,,, charlie

Attachments: 1 described; binary payloads are missing from this source WARC

Forwarded message for Johnson County Hams, from Robert LaGrange, N9SIU

Good afternoon to All,

This is just a heads up on a coming exercise that will be held on Sunday October 31st, 2010, known as Halloween. The State ARES is now requiring each county to have and partisipate in a Simulated Emergency Test (SET) exercise each year.

The Goblin Patrol has all the elements of an exercise to make this count toward our Johnson County ARES group requirements to the State ARES and ARRL.

I have attached the score card of SET to show you what is counted in the partisipation of the Johnson County ARES group during this exercise. Brenda KC9EBL has said that she will be the Net Control for the Goblin Partol and will check in all partisipating stations. I will be monitoring all radio traffic of the Goblin Patrol from my home station to make a record of the exercise traffic. If this were an actual event we would have a Net Control station set up at the Johnson County EOC in support of the Johnson County EMA.

A report of the SET activities and partisipation as well as radio traffice will be submitted to ARES/ARRL after the SET has taken place.

Please be part of the Goblin Patrol and the SET this Halloween. We will need mobile stations to work on the road patroling different areas in the county to assist the Johnson County Sheriff Department.

We can use base stations and HT's to work in your neighborhoods also. Let Johnson County ARES show that we can be support them when the opprtunity arises.

All ARES/RACES members are encouraged to partisipate in this event. We need to keep ourselves sharp since we have not had any severe weather nets or EOC activations for quite sometime.

If you have any questions please contact me.
73,
Bob LaGrange N9SIU, Johnson County ARES EC.
"Let us remember that if we suffer tamely a lawless attack on our liberty, we encourage such attack." -- Samuel Adams (1722 to 1803)

http://www.svhfs.org/sprints.html

SVHFS Sprints
The Southeastern VHF Society sponsors Fall VHF/UHF Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.
The contest is intended for single operator, single transmitter entries. However, if one wishes to introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the right to allow such entries, if identified as such. In no case will there be more than 1 radio operator at one time. A second person can not serve as a “spotter” while the first operates. Operating categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress the activity into a shorter time span. While the rules for Sprints vary by year, we are always open to suggestions on how to improve them for the future. If you have an idea on how to make the Fall Sprints better for next year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help out. This year, as a result of several requests, we will be using 6 character grid squares for 432 and microwave.
Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest now. This will allow computer programs to both generate the logs and check the logs. Rover scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference the Southeastern VHF Society sponsors, please watch this website

2010 Sprints Schedule Summary
* 144 MHz - Monday, September 20, 7 pm to 11 pm local time
* 222 MHz - Tuesday, September 28, 7 pm to 11 pm local time
* 432 MHz - Wednesday, October 6, 7 pm top 11 pm local time
* Microwave - Saturday, October 16, 6 am to 12 pm local time
* 50 MHz - 2300 UTC Saturday, October 30 to 0300 UTC Sunday, October 31.

Introducing the 2010 Fall VHF/UHF Sprints:The Southeastern VHF Society is again sponsoring the Fall VHF/UHF
Sprints. All amateurs are encouraged to participate, even if only in a small way. They are meant to get everyone on the air. The rules encourage rover, microwave operation and the casual operator new to VHF/UHF.
This year we are using 6 digit grid squares on 432MHz and Microwave, as many have

requested this.The contest is intended for single operator, single transmitter entries. However, if one wishes to
introduce a newcomer to weak signal vhf/uhf operations, the sponsors of the contest reserve the
right to allow such entries, if identified as such. In no case will there be more than 1 radio operator
at one time. A second person can not serve as a “spotter” while the first operates. Operating
categories are still Single Op and Rover.
Sprints are held on different days for each band except for the Microwaves (902 and up) that are
held together. The operating time for each Sprint is short (like a sprint :-) and meant to compress
the activity into a shorter time span.
At present we do not have any plaque sponsors. If you would like to sponsor a plaque for one of the
Sprints please contact the Fall Sprints Chairman Bruce Randall WD4JQV.
WD4JQV@....
While the rules for the Fall Sprints are set for 2010, we are always open to suggestions on how to
improve them for the future. If you have an idea on how to make the Fall Sprints better for next
year (different dates, times, rule change, etc.) please drop the Fall Sprints Chairman a note and help
out.
Please notice that, except for rovers, the scoring is more like the ARRL June VHF contest
now. This will allow computer programs to both generate the logs and check the logs. Rover
scoring is intended to encourage activation of many grids!
For details and up-to-date information about the Fall Sprints and the annual technical conference
the Southeastern VHF Society sponsors, please visit our website at
www.svhfs.org73, have fun, and good luck!
Bruce Randall WD4JQV
fallsprints@...
2010 Fall Sprint Chairman
2010 Fall VHF/UHF Sprint Rules:
1. Object: To work as many amateur stations in as many 2 X 1 degree grid squares as possible,
using authorized amateur frequencies on the 50, 144, 222, 432 MHz and Microwave (902 MHz and
above) bands during the contest periods.
2. Contest Period:
2.1 The 144 MHz Sprint will be from 7 PM to 11 PM local time on Monday September 20, 2010.
LOG is due by October 20, 2010.
2.2 The 222 MHz Sprint will be from 7 PM to 11 PM local time on Tuesday September 28, 2010.
LOG is due by October 28, 2010.

2.3 The 432 MHz Sprint will be from 7 PM to 11 PM local time on Wednesday October 6, 2010.
LOG is due by November 6, 2010. Exchange is 6 Digit Grid Square !!
2.4 The Microwave (902 MHz and above) Sprint will be from 6 AM to 12 PM local time on
Saturday October 16, 2010. The Microwave Sprint is one Sprint and certificates will be awarded
for highest total score. See section 4. below for scoring.
LOG is due by November 16, 2010. Exchange is 6 Digit Grid Square !!
2.5 The 50 MHz Sprint starts 2300 UTC Saturday, October 30, 2010 and ends 0300 UTC Sunday,
October 31, 2010.
LOG is due by November 30, 2010.
3. Exchange: Call signs and Grid-square locator. Signal report optional. 432MHz and microwave
require all 6 characters of the grid square. Such as EM94LV
4. Scoring:
4.1 QSO Points:
4.1.1. Count 1 point for each complete 50- or 144-MHz QSO.
4.1.2. Count 2 points for each 222- or 432-MHz QSO.
4.1.3. Count 3 points for each 902- or 1296-MHz QSO.
4.1.4. Count 4 points for each 2.3-GHz (or higher) QSO.
4.2 Multiplier: The total number of grid squares worked. Each 2 X 1 degree grid square worked
counts as one multiplier.
4.3 Final Score (Except Microwave): Multiply QSO points by multipliers. Each sprint is scored
separately. ARRL June 2010 VHF contest scoring software will produce the correct score.
4.4 Rovers Score: Each grid activated is scored separately as if the station was a normal single
operator in that grid. Please separate logs for each grid activated. The final score is the sum of the
scores for the individual grids activated. More than one grid must be activated to be a rover!
ARRL scoring software will NOT work.
4.5 Microwave Final Score: Count 3 QSO point for each complete 902 or 1296 MHz QSO. Count 4
QSO points for each 2.3 GHz (or higher) QSO. Add up the QSO points for all bands and then
multiply this total by the total number of multipliers. A grid worked on more than one band counts
as a new multiplier on each band. For example: EM94 worked on 902, 1296 and 2304 MHz is 3
multipliers. ARRL June 2010 VHF contest scoring software will produce the correct score.
5. Reporting: Logs must be submitted no later than 30 days after the closing date of the each event.
Only submitted logs are eligible for awards. Logs must be in ARRL format (log sheets and

summary sheet as used for ARRL VHF contests) to be accepted, and must show current address to
be eligible for awards. Electronic submissions in ARRL acceptable electronic format may be
mailed on diskette or e-mailed with log file as an ATTACHMENT only (Not in the body of
e-mail). Subject line of e-mail must contain “2010 Fall Sprint”. In e-mail addresses below (at) is
really an @ sign.
5.1 144 MHz Sprint logs to:
Ott Fiebel W4WSR, PO Box 957, Hayesville, NC 28904 ottf(at)wbia.net
5.2 222 MHz Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net
5.3 432 MHz Spring logs to:
Jim Worsham W4KXY, 1915 Oak Wind Lane, Buford, GA 30519-6766 w4kxy(at)arrl.net
5.4 Microwave Sprint logs to:
Bruce Randall WD4JQV, 928 Falls Rd, Rock Hill, SC 29730 wd4jqv(at)arrl.net
5.5 50 MHz Sprint logs to:
Ray Rector WA4NJP, 3493 Holly Springs Rd, Gillsville, GA 30534 wa4njp(at)bellsouth.net
6. Certificates for top three Single Op finishers in each sprint and top three Rovers in each sprint if
sufficient Rover competition is shown. Certificates to be awarded at the Southeastern VHF Society
banquet.
7. For Microwave only: Use of telephone, packet or internet methods to schedule contacts during
the contest is acceptable. The telephone, packet or internet channel will not be used while the
contact is in progress. No “OK I am hearing you now.” over the alternate channel. The alternate
channel will not be available in any way to the operator during the contact. The complete exchange
of call signs and grids must be accomplished on the relevant amateur radio band. All other bands
must use only amateur radio communications for scheduling during the contest.
The Fall Sprints are sponsored by the Southeastern VHF Society.Please visit www.svhfs.org for any updates.

2616. 2m FM mobile or 2m/440 mobile wanted

Yahoo group: IndyHamRadio
Date: 2010-11-06 00:03:18 UTC
From: Dan Evans
Topic: 2616 Message: 2616

Good evening group,

I'm trying to push myself to be more active, and thought a new radio in the truck might help, hi hi.

I had a few offers of IC208H rigs for sale, but so far all were a bit out of my price range. But thanks for the replies:-)

So I'm still interested in a newer 2m only or 2m/440 mobile radio. I am an Icom fan, but will consider others as well.

I particularly like the IC208H and the ICV8000, or possibly the IC2100H.

Radio must be in perfect working condition, and preferably with the mobile bracket. Cosmetic condition is not as important as long as it hasn't been seriously damaged, hi hi.

Please email me your best price shipped to Charlestown, IN, 47111. And pictures, if you have them:-)

Thanks,

73
Dan

From: KB9BVN
Topic: 2620 Message: 2620

I have a almost brand new FT-60R, (2m/440Mhz) with programming software and cable, MFJ-295 speaker mic, NC-88B battery charger, one battery, original rubber duck antenna and a SMA/BNC adapter so you can use other non-SMA antennas. It is in the original box, with the manual. I have had it about a year, I just don't ever use it. So it's just taking up space here. NEVER BEEN DROPPED. Serial # 6G380649

HRO has this radio for $200.00
The Mic is $19 from MFJ
The programming cable and software is $20 on eBay.

So it's about $239.00 new

I'm asking $200.00 for everything. Let me know if you are interested.

IN-ARRL BULLETIN 03-2010
06:00AM EST 8 NOV 2010 de KB9BVN

From Ivin Flint, Indiana Section CW Net Manager QIN

The Fort Wayne hamfest is November 13th and 14th. I am taking this opportunity to introduce/re-introduce the Indiana Section Slow Code Net called ICN at a meeting that will be held on location Sunday the 14th. This will be at 10:00AM Eastern Standard Time in the Red Room. Thanks to Brian Jenks for securing a room for us!

I will be discussing the following:

1 - How the new net will work with QIN and the NTS to get traffic moved in and out.

2 - Basic CW traffic net operations. (How to check in, what to expect from your net control, how you are released from the net.)

3 - How to be net control and how to handle the net operation on CW.

4 - How to move traffic with CW, both sending and receiving, for a successful "QSL".

5 - How to form a radiogram.

Everyone is welcome attend. There has been a lot of interest in getting a slow code net going again in Indiana so it is exciting to be able to put this in place. I have some new ideas to share and I hope you will come with some as well and also any questions you might have about CW traffic nets. Even if you don't know CW but have an interest in the nets and would like to learn more please come. The slow code net is for operators who enjoy a slightly slower pace and also anyone new to CW and traffic nets. It's a GREAT place to learn. Make mistakes and have fun with old and new friends. I am sure we will have a great time at the meeting and also getting the new net off the ground.

2622. Harbor Freight ad.

Yahoo group: IndyHamRadio
Date: 2010-11-08 15:57:02 UTC
From: kc9brz
Topic: 2622 Message: 2622

The Sunday Nov 7th, 2010 Indianapolis Star had an ad-flyer for Harbor Freight.

The Digital multi-meter coupon price has gone up to $2.99 from $2.49,
and the battery float charger has gone up to $4.99 from $3.99.

However, if you still have the coupons from a couple weeks ago for $2.49/$3.99, they are still valid through 12/26/2010.

The $2.49 multi-meter might be a good Christmas/Hanukkah/Kwanza/Eid
stocking stuffer to help get a youngster interested in electronics.

10 Nov 2010

Fellow ARRL Members:

As in the last nine years, I will be attending the 2010 Fort Wayne Hamfest & ARRL Indiana State Convention this coming Saturday, November 13th. There will be an ARRL Forum at 10:00 AM. This is your chance to ask questions about the latest FCC rulings and ARRL programs and activities including those by your board of directors.

I will be assisted by ARRL [FCC] Regulatory Specialist Dan Henderson, N1ND, Central Division Director Kermit Carlson, W9XA, and Indiana Section Manager John Poindexter, W3ML.

If we don't have the answers, we will put you in contact with the person or person's who have them.

This is the only time each year that you will have face-to-face access with all of us at the same time. The meeting rooms at the Allen County War Memorial Coliseum are currently the best in the Central Division.

All hamfest activities are inside this one large building.

We are looking forward to seeing many of you this coming weekend.

ARRL Central Division
Director: George R Isely, W9GIG

Holy Cow! It's the 1st of December, the year is almost over, the weather stinks....and you have not yet upgraded your Amateur Radio license. Get to a testing site and upgrade now!

Go to http://aa9pw.com/ right now and start taking the practice exams for General and Extra. With daily drilling between now and Dec 18th you can be ready to pass your upgrade and reward yourself with a brand new HF transceiver. All you needed was a good excuse! Right?

Midstate Amateur Radio Club in Franklin Indiana will be offering VE testing on Saturday December 18th at 9AM. That gives you 17 days to bone up on the practice exams and then come down and pass the test. It's not impossible, get rid of the mental block, we've had 8 YEAR OLDS come in and pass exams.

Don't get left behind, the solar maximums are getting closer every day, and you don't want to miss out on the DX. Make this month your upgrade month, study the exams, and come down to test.

One more time:

Midstate Amateur Radio Club
Franklin IN
Johnson County EOC building next to the Sheriff Department.
9AM on Dec 18th, 2010

This is our last test session of the 2010 year!

Job Title:

Telecommunications Tech 4

Job ID:

570674

Apply Before:

12/19/2010

Location:

North Central Indiana

_____

JOB DESCRIPTION:

Base Salary: $26,286

This position is primarily located in North Central Indiana and requires the successful candidate to respond to after-hours call outs for emergency repairs and services.

To serve as an employee of the Integrated Public Safety Commission whose primary responsibility is to maintain, direct and coordinate the maintenance of all communications systems and equipment, in the assigned areas.

DUTIES & RESPONSIBILITIES:

☐ Install, maintain and repair all communications and radio equipment in the area of assignment.
☐ Perform programming, testing and alignment of mobile/portable two-way radio equipment and other communications equipment.
☐ Complete equipment maintenance records required by the Federal Communications Commission (FCC), and update computer-generated data as needed.
☐ Perform preventative maintenance measures and testing procedures to ensure uninterrupted operation of the mobile and portable radios, base station/console, trunking, and telephone systems within area of assignment.
☐ Coordinate activities with other technicians to ensure total system integrity.
☐ Develop and maintain radio templates.
☐ Provide support for Local Area Networks (LAN), Wide Area Networks (WAN) and Dial-up Networks.
☐ Research, develop and initiate standardized testing procedures to ensure uninterrupted operation of the state communications system and provide adequate telecommunication services to the department served.
☐ Analyze system problems and assist in the assessment and optimization of radios and telecommunications network design through review and assessment.
☐ Provide communications support for mobile communications trailers and special assignments.
☐ Diagnose problems of a variety of radio systems and equipment, including mobile and base station radio systems, portable radios, trunking systems, microwave systems, making the appropriate repairs or replacements.
☐ Assist in design, development, construction, or modification of new or existing equipment.
☐ Assist in the design, configuration and implementation of telecommunications systems, networks, and structured cabling including but not limited to multi layer switches/routers, VPN appliances, intrusion detectors, fire walls, extranet, distributor sniffers, PBX and KEY telephone systems, other communications equipment or new technology.
☐ Repair communications equipment, including VHF base stations, and microwave at remote sites.
☐ Perform frequency measurements; test, measure and align radio equipment to assure compliance with F.C.C. Rules and Regulations.
☐ Provide technical support to agency personnel with electrical and radio issues in agency vehicles.
☐ Maintain equipment record including case history or repairs for each piece of equipment in area of assignment.
☐ Set up and maintain communications equipment for the mobile comms trailers.
☐ Perform identification of telecommunications system/network problems.
☐ Assist in the performance of testing, adjusting, and troubleshooting of equipment.
☐ Assist in feasibility studies for radio and antenna products, and development of request for proposals.
☐ Assist in the evaluation of vendor products and make recommendations on selection.
☐ Provide tactical and strategic input on overall application of radios and related projects.
☐ Assist in the management of the support, monitoring and troubleshooting of hardware/software problems and recommend scheduling of repairs.
☐ Provide instruction, direction and assistance to other areas as needed.
☐ Assist in the evaluation of new technology and products to determine the feasibility of implementation.
☐ Provide guidance to department personnel or other user agencies for maximum utilization of the communications

equipment.
☐ Perform related duties as assigned.

QUALIFICATIONS:

☐ Must possess an F. C. C. General Class Radiotelephone License or an acceptable equivalent certification with ability to apply technical standards, assure compliance with FCC Rules and Regulations.
☐ Must possess a Technical Diploma in Electronics from an accredited Technical School or College, or acceptable skills, knowledge and ability in communications and electronics -- high school diploma or GED required.
☐ Must have a basic understanding of computer operation and terminology. Ability to work with programming software, computer spreadsheets, databases, programming and retrieval of information using various specialized software.
☐ Comprehensive knowledge of the telecommunications field in general.
☐ Must have a valid Indiana driver's license.
☐ Ability to respond to after-hours call outs for emergency repairs and services.
☐ Working knowledge of the hazards involved with high voltage electronics equipment and applicable safety procedures.
☐ Ability to climb ladders and gain access to equipment cabling.
☐ Working knowledge of telecommunications architecture, network design, traffic engineering, local area network architecture and mainframe terminal access methods.
☐ Working knowledge of communications systems and equipment used to network mainframe and telephone systems.
☐ Working knowledge of radios, data devices and structure cabling systems.
☐ Must be able to read and comprehend technical manuals, read and interpret schematic diagrams.
☐ Must be able to communicate with people within the department as well as outside vendors, and technical support services. Skills must encompass written and verbal communication forms.

PHYSICAL REQUIREMENTS & WORK ENVIRONMENT:

☐ Work is generally performed in, but not limited to agency Radio Shop.
☐ May be required to travel for training or special assignments.
☐ Must be able to lift, move and install equipment weighing up to 50 pounds.
☐ Must be able to withstand occasional high levels of stress.
☐ Exposed to microwave radiation, noise, battery acid, and hazardous fumes from soldering, exhaust, solvents and chemicals. Work also involves frequent contact with high voltage AC wiring and breaker boxes.
☐ Work regularly involves standing, kneeling, and some climbing and requires high level of manual dexterity when performing electronic repair.
☐ Emergency situations sometimes require long hours with no immediate assistance to effect repairs.

BENEFITS:

The State of Indiana offers a comprehensive benefit package which includes medical, dental, vision, life insurance, retirement plans and accrued leave.

EQUAL EMPLOYMENT OPPORTUNITY:

The State of Indiana is an Equal Opportunity Employer.

I still order from them on occasion. If they have it in stock and they can ship it that day, I'll generally have it the next day because they are so close. On the other hand, I've learned that if they say they don't have it in stock and will have to back-order the item, I cancel the order. It seems that they don't have a very good mechanism for tracking back-orders.

Bob...

P.S. Could you guys trim your posts when you reply? One copy of R&L's postcard in my email box was quite enough. I really didn't need three.

I am thinking about buying a HD Radio Receiver as a Christmas gift for
someone. They don't have an amp to run it through, so it would need
to be stand alone. What stations in the the Indy/Central Indiana area
even offer digital HD audio programming? I was going to spend about
$150 on this thing...so I need some advice. What features do I need
to make sure it has? Any particular brands to avoid?

Thanks es 73 de KB9BVN

Have been doing some research on digital radio. DRM seems to win, hands down.

DRM30 on AM broadcast and shortwave, DRM+ in the FM broadcast band. If we are to move to digital, then DRM seems the best choice. HD is not an open source system, DRM is. Plus we can use DRM on amateur radio.

Digital Radio Mondiale, an alternative to HD radio?

Brian,

Use your browser and type in HD radio. I have a couple of them at home and a headset type I can take with me. The quality is outstanding and there are plenty of radio stations in the Indy area to listen to. Some stations have an additional three to four channels to listen to. There are some good deals out there. Sony makes a very good table top model.

Merry Christmas!!

I would imagine that he realizes that it isn't the proper gift for you. He knows that you are far too busy with the CW nets, and simply wouldn't have time for it --- besides, I'm betting that CW sounds really strange in HD!!!

Yeah but....what local broadcasters are using this protocol? I seem to be
able to find dozens using HD Radio, and none using DRM...with the exception
of a few shortwave broadcasters.

The first article covers this. The FCC decided on HD which a proprietary system (owned by a private group) over DRM, except for on Shortwave.

The problem is that HD has not sold well. If it continues, it will just be another failed technology.

I do not know of any commercial radio stations using DRM type of encoding. The standard for the US is IBOC which means "in-band on-channel" and has since 2002. The UK uses DAB encodeing "Digital Audio Broadcasting" and has since the 1990's however according to what I have lately read about it the UK is considering changing to IBOC. Sorry for the blokes that have DAB. I think that DRM is mainly for shortwave broadcasting.

Interesting. Looks like politics, or bad marketing...maybe both.

I will look at HD Radios for this gift idea. The person getting it will enjoy being able to listen to local news, talk, sports, and music programming. Sometimes the better protocols never get a chance to fail.

Beta vs VHS...how did VHS win? Blu-Ray somehow comes out on top of the high def video wars...how'd that happen?

DRM has a bad case of mistaken identity....I'm sure it is often confused with the Digital Rights Management DRM and the thugs that sue soccer moms for millions when they download an old Bobby Sherman song.

I am the kiss of death to technology though...I killed the Laser Video Disc, 8 Track Tape, and Atari 2600...just by buying them.

From: Greg
Topic: 2643 Message: 2654

DAB uses 1500 khz of bandwidth, great if you are the BBC and control most of the radio programming.

DRM (digial radio "worldwide") can be used in an in-band, on-channel like HD radio does. Thus DRM can be used as analog/digital mix on the same frequency.

With many broadcasters now backing off of HD radio (requires a yearly license fee), HD may be slowly dying. It has not been picked up in other countries, DRM has.

>Looks like politics...

Or lack of direction from the national telecommunications regulatory agency.

The FCC has, for the last 20 years or so, taken a "let the market decide" approach. The result is no real direction when it comes to HD radio, four different standards for digital cell phones, and who knows what else. Even HDTV floundered for a while before consensus was reached in the industry.

>I will look at HD Radios for this gift idea. The person getting it
>will enjoy being able to listen to local news, talk, sports, and

That's the bottom line. It doesn't matter whether or not DRM or DAB is better than HD Radio. What matters is availability of local programming that the user wants to hear.

2659. ICN - Indiana Slow Code Net

Yahoo group: IndyHamRadio
Date: 2010-12-29 15:36:39 UTC
From: Brian Murrey
Topic: 2659 Message: 2659

ICN is the Indiana Slow Code Traffic Net. It can be found every night on 3535 at 00:00Z for now.

ICN needs some volunteers to serve as NCS operators, you need to be a current dues paid ARRL member.

If you are interested in serving as NCS, let me know what night is good for you. I would like to have 14 volunteers so we only have to serve as NCS a couple of times a month. If you have never been an NCS, you are who I prefer. This is a slow code beginners net for ops that are interested in operating CW, and learning how to pass traffic.

We run at about 13 WPM or less, we will slow down to your speed.

Hello,

There is a change to the information made by Brian about the policy for Net Control Stations.

The section policy concerning NCS positions is:

We "prefer" NCSs be ARRL members, but it is "NOT" a requirement.

Everyone is welcome to accept a NCS position.

Date: 2010-12-31 00:19:09 UTC
From: KB9BVN
Topic: 2662 Message: 2662

I am unable to be on ICN tonight, other things got in the way. I will not be able to be the NCS every night, so if you hear no net at 7PM...PLEASE feel free to jump in and call the net.

Just post a summary to me in email where it is done.

How many QNI, and list them. Show who the NCS is.
How many minutes? (QTR)
How much traffic? (QTC)

I am looking for someone that is familiar with creating website with Joomla. If you have some free time to donate, I need some help putting together a site for the ICN. Send me your name, call, and phone number and we can discuss it. If you are a Wordpress kind of web person, I could be convinced to use that instead of Joomla.

I have server space, MySQL, PHP, FTP, etc etc

I would like to see the ICN website as something that CW NTS newbies all over the country can find useful. I am also collecting all I can find on CW NTS net procedures and I plan to make it available on the website. If you have something you think might help, please send it.

73 de KB9BVN
Brian Murrey

So far I have two people that have volunteered to do NCS a couple nights a month. I need 12 more. It's easy. I do a terrible job of it, so I am learning this right along with all the new guys. If we have 14 NCS volunteers, then we can set it up for Even Mondays, Odd Mondays, Even Tuesdays, Odd Tuesdays...and so on and so forth etc etc yadda yadda yadda....

Indiana Slow Code Traffic Net - Every night at 00:00Z on 3535

Darl,

New people join this INDYHAMRADIO email list now and then, and
I think it would be a good idea for you to include/explain
the "who" and "what's it about" when announcing your dinners every
month.

A newcomer might mistakenly think your dinner meetings are some
official thing for the email list. Or, they might not realize it's
a meeting of ham radio folks.

And us old-timers, who forget everything on a monthly basis,
need reminding of what it's about too.

Also, for a first time visitor to your meeting, it would sure help
to know who they should look for, or who they should ask for when
they show up at the restaurant and don't already know someone there.

Like, is one of you going to wear a baseball cap or T-shirt with
your call sign on it, so newcomers can easily find the group?

I'm afraid if I show up, and start checking out all the patrons to
see who has an HT clipped to their belt (ie, trying to figure out
who the hams are), non-hams might think I'm some sort of pervert.

I have no idea what the dinners are, either. I still don't know if they are affiliated with the MARC club in Johnson County, the Indianapolis Radio Club or ??? I've been on the list for well over a year.

The dinners are open to all amateur radio operators. I don't think anybody cares about your affiliation or checks credentials at the door. It's about fellowship, not business or technical matters.

Most of the time, these dinners are held at restaurants that have a private meeting/banquet room. If it's not obvious where the ham radio group is meeting, ask the restaurant staff. Or just lurk in the parking lot, locate a car that has antennas on it coming into the lot, and ask the person getting out of the car if they are there for the ham radio dinner.

Alex,

As Bob stated, all of our dinners are open to all ham radio operators and their families. The only group we are affiliated with is ham radio. The reservations are under Curtis and while we will not have a private room, we will have an area where we can seat 20-30 people.

Hope to see you there!

Hi Everyone,

The ham radio dinners are open to any and all ham radio operators and their families. We go to a restaurant (usually not a chain or, if a chain, a local chain) on a different side/area of town each month. That way everyone has a chance to have it close to their house every once and a while. Not everyone makes every dinner but we usually have a good group.

If you have not joined us before, the easiest thing to do is show up about 15 minutes before the dinner and Steve (Darl is his other name) and I will be there. We drive Jeeps (either Army green or sea blue) so if anyone hasn't joined us before and doesn't know who we are, you are welcome to look for our vehicle and come up and introduce yourself. His call, ND9C, is on his Jeep and my call, WS9H, is on mine. We also have VHF/UHF antennas. We are a very friendly bunch and love to meet new hams or hams that are new to the dinners as well as their families.

One other thing we do is always go to a family-friendly restaurant (and always non-smoking) as we sometimes have families with children join us. The reservations are under either Curtis or Nine Landers as we are sometimes known.

The only official thing we do is have fun.

We started this a little over a year ago because although we had been hams for over 15 years, we didn't really know many local hams. We wanted a way to meet new people and, if there is one thing that ham radio operators love besides radio, it's food:)

We hope anyone who wants to enjoy an evening out will join us, if not this month, next month. If you avoid the cold weather, feel free to join us in the spring as we do this year-round.

73,

Rhonda

2673. FS: 40 Foot Mast Kit

Yahoo group: IndyHamRadio
Date: 2011-01-12 17:24:51 UTC
From: Brian Murrey
Topic: 2673 Message: 2673

This is a olive drab, 48 foot mast kit. The mast sections are fiberglass, and this all comes with a nice carrying bag. I bought it last fall, and I have decided I probably won't use it. So here it is.

12 Sections at 48 inches each, includes carry bag....all in Olive Drab

You can get the same thing on eBay for $9.00 plus $28 shipping...which is what I paid.

Asking $30

Let me know if you are interested.

2676. Ham Radio dinner for January

Yahoo group: IndyHamRadio
Date: 2011-01-13 02:54:41 UTC
From: Rhonda
Topic: 2676 Message: 2676

Just a reminder that we will have January's dinner this Saturday night at 7pm at:

Charbonos
128 north state road 267
Avon,In 46123

www.charbonos.com

The dinner is open to all ham's and their families. Our reservations are under Curtis so if you don't see us or know what we are, just tell the greeter that you are looking for our party and come introduce yourself.

Hope to see you there!

Rhonda

Hello to all in the group! Although i don't live in Indiana,i still was admitted to this group!! Thanks!! from reading the little i have of the posts,it is so informal,thats great!! Now,let me introduce myself,name is David,call is KA4ZUC,been ham for 28 yrs,soon be 29,licensed as a general class, Love QRP,which is my main mode of operation! CW is also main mode of operation as well!! I'm Retired,and besides hamming,i also enjoy oil painting.enough about me!!,again thanks for allowing an out of towner to be part of this fine group!! God Bless and 73's David/ka4zuc

2678. antennas for the FT-8900

Yahoo group: IndyHamRadio
Date: 2011-01-13 23:35:12 UTC
From: kc9brz
Topic: 2678 Message: 2678

Would anyone who is knowledgeable, and with time on their hands, care to explain to me how best to hook up two antennas to one quad band Yaesu FT-8900 rig? It's a 10m/6m/2m/70cm rig. There is only one antenna out connector (a SO-239) on the back of the rig.

There is no decent quad band antenna that will provide more than a 2db gain for the 2m/70cm. So I'm intending to install it with a 10m antenna plus a 6m/2m/70cm antenna, or else a 10m/6m plus a 2m/70cm. Probably the former, with a dipole cut for 10m, and a Diamond V2000A as the tri-band 6m/2m/70cm.
http://www.rlham.com/cgi-bin/shop/modellookup.dbw?MODEL=V2000A
The V2000A claims 2.1/6.2/8.4 db gain.

This is going to be a base installation. Haven't determined if it will be in an attic or outdoors yet.

I'm thinking of a switchless arrangement that has a duplexor/splitter with built-in hi/low pass filters. Here's a pic of a Comet duplexor that seems to have the right split:
http://www.cometantenna.com/popup.htm?pro_images/CF-360B.jpg

I'm leaning to the duplexor to keep it simple, so no SWR snafus if the op forgets to switch to the right antenna. Is this Comet CF-360B an appropriate product for the intended application?

Thanks.

-Dave, kcbrz.

>a dipole cut for 10m, and a Diamond V2000A as the tri-band 6m/2m/70cm.

Diamond makes decent antennas. A few things to think about:

1. The V2000 is 8.3 feet long. Do you have enough height in your attic for that? Will you be able to maneuver the antenna into your attic?

2. If mounted outside, bear in mind that it will be a lightning magnet. Proper grounding is required. And if you drive a ground rod for your antenna, that ground must be tied to your electric service entrance ground to meet the National Electric Code requirements. If your grounds are not tied together, the potential of one ground could float above the other causing a current in any conductor that's connected to ground.

3. Also if mounted outside, Diamond antennas have a reputation for getting loose where the fiberglass radome goes into the metal base. Water will get in through the seal. This will happen over several (10-15) years.

>I'm thinking of a switchless arrangement that has a
>duplexor/splitter with built-in hi/low pass filters.

A duplexer is the way to go. If you go with a 10m dipole plus a 6m/2m/70cm vertical, the Diamond MX610 or the Comet CF360 are your choices.

Bob...

2680. Any VHF Packet stations OTA in Central Indiana?

Yahoo group: IndyHamRadio
Date: 2011-01-14 03:39:47 UTC
From: N9WNH
Topic: 2680 Message: 2680

Looking for any VHF Packet stations on the air in Central Indiana, especially medium to high profile and on 145.050 Mhz. County EOC or club stations that are on 24/7 are of great interest. As you know the IDHS Statewide Semi-Annual Test is this Saturday. Packet stations on the air with digipeating and or node capability will be of great help.

Remember almost any TNC can be a Digipeater as long as it is enabled. And alot of TNC's can be a simple Node such as with most Kantronics TNC's using the KA-Node etc.

NE Indiana that normally operates on 145.530 Mhz will be trying to reach the State EOC Packet Mailbox (W9SEM-1) on 145.050 Mhz which is used in central and southern portions of the state. We could use any help in all areas of the state not just for us here in NE Indiana too.

Please post your stations here including your Callsign-SSID's, your frequency that you normally operate on if not 145.050,your location and your power out,gain and heigth/elevation. Please consider a switch to 145.050 for the test and beyond to coincide with the rest of the state.

Also please join us as a member on the Indiana Packet Yahoo Group
http://groups.yahoo.com/group/IN_PACKET/

2681. ARRL VHF Sweepstakes, Saturday, 1/22, 1900 UTC - Monday, 1/24, 0359 UTC

Yahoo group: IndyHamRadio
Date: 2011-01-15 05:07:48 UTC
From: Mark Thompson
Topic: 2681 Message: 2681

http://www.arrl.org/january-vhf-sweepstakes

Full Contest Details

1. Object:To work as many amateur stations in as many different 2 degrees x 1 degree grid squares as possible using authorized frequencies above 50 MHz. Foreign stations work W/VE amateurs only.

2. Date and Contest Period:The date will be announced annually by the ARRL but will generally be the third or fourth weekend in January. Begins 1900 UTC Saturday, ends 0359 UTC Monday (January 22-24, 2011).

3. Entry Categories:

1. 3.1. Single Operator.

1. 3.1.1. Low Power

2. 3.1.2. High Power

2. 3.2. Single Operator Portable

3. 3.3. Rover.

1. 3.3.1. Rover

2. 3.3.2. Limited Rover

3. 3.3.3. Unlimited Rover

4. 3.4. Multioperator.

5. 3.5. Limited Multioperator.

4. Exchange:Grid-square locator (see April 1994 QST, p 86).

1. 4.1. Exchange of signal report is optional.

5. Scoring:

1. 5.1. QSO points:

1. 5.1.1. Count one point for each complete 50- or 144-MHz QSO.

2. 5.1.2. Count two points for each 222- or 432-MHz QSO.

3. 5.1.3. Count four points for each 902- or 1296-MHz QSO.

4. 5.1.4. Count eight points for each 2.3 GHz (or higher) QSO.

2. 5.2. Multiplier: The total number of different grid squares worked per band. Each

3. 2 degrees x 1 degree grid square counts as one multiplier on each band it is worked.

4. 5.3. Final score: Multiply the total number of QSO points from all bands operated by the total number of multipliers for final score.

5. 5.4. Rovers only: The final score consists of the total number of QSO points from all bands times the sum of unique multipliers (grid squares) worked per band (regardless of which grid square they were made in) plus one additional multiplier for every grid square from which they successfully completed a contact.

1. 5.4.1. Rovers are listed in the contest score listings under the Division from which the most QSOs were made.

6. Reporting:

1. 6.1. Electronic submissions may be emailed to JanuaryVHF@arrl.org and hand-written paper logs or diskettes mailed to January VHF, ARRL, 225 Main St, Newington, CT06111.

2. 6.2. Entries that have been electronically generated must submit their log file in the Cabrillo file format. Paper printouts of electronic files are not acceptable substitutes.

3. 6.3. Entries must be emailed or postmarked no later than 0400 UTC Wednesday, February 23, 2011.

4. 6.4. Entries may be submitted using the web applet at www.b4h.net/cabforms

5. 6.5. Rovers who submit scores for the club competition must submit a second summary sheet indicating QSOs and scoreif they make any contacts from outside of the club territory. Indicate clearly on the summary sheet and in log if the log is the total entry or that portion to be counted for the club score.

7. Miscellaneous:

1. 7.1. Stations may be worked for credit only once per band from any given grid square, regardless of mode. This does not prohibit working a station from more than one grid square with the same call sign (such as a Rover).

2. 7.2. Only one signal per band (6, 2, 11/4, etc) at any given time is permitted, regardless of mode.

3. 7.3. Multi-operator stations may not include QSOs with their own operators except on frequencies higher than 2.3 GHz. Even then, a complete, different station (transmitter, receiver and antenna) must exist for each QSO made under these conditions.

8. Awards:Certificates will be awarded in the following categories:

1. 8.1. Single operator.

1. 8.1.1. Top single operator in each ARRL/RAC Section for high and low power.

2. 8.1.2. Top single operator on each band (50, 144, 222, 432, 902, 1296 and 2304-and-up categories) in each ARRL/RAC Section where significant effort or competition is evident. (Note: Since the highest score per band will be the award winner for that band, an entrant may win a certificate with additional single-band endorsements.) For example, if KA1RWY has the highest single-operator all-band score in the CT Section and her 50- and 222-MHz scores are higher than any other CT single operator’s, she will earn a certificate for being the single-operator Section leader and endorsements for 50 and 222 MHz.

2. 8.2. Top single-operator portable in each ARRL/RAC Section where significant effort or competition is evident. (Single operator portable entries are not eligible for single-band awards.)

3. 8.3. Top rover in each ARRL Division and Canada where significant effort or competition is evident. (Rover entries are not eligible for single-band awards.)

4. 8.4. Top multi-operator score in each ARRL/RAC Section where significant effort or competition is evident. (Multioperator entries are not eligible for single-band awards.)

5. 8.5. Top limited multioperator in each ARRL/RAC Section where significant effort or competition is evident. (Limited multioperator entries are not eligible for single-band awards.)

6. 8.6. Top DX stations where significant effort or competition is evident.

9. Other:

1. 9.1. See “General Rules for All ARRL Contests” and “General Rules for ARRL Contests on bands above 50 MHz (VHF)” in November 2001 QST

2. 9.2. For more information contact contests@... or (860) 594-0232.

2682. SOLD SOLD SOLD - Fiberglass Masts

2683. Packet Workshop

Yahoo group: IndyHamRadio
Date: 2011-01-19 20:04:03 UTC
From: Brian Murrey
Topic: 2683 Message: 2683

Copied from InHAM

A packet workshop will be held in Lafayette on Saturday, FEB 19, 9:00 a.m. - 12:00 p.m., sponsored by Tippecanoe County ARES. The workshop is open to all amateurs. We will start with a quick configuration of a Kantronics KPC-3 TNC, then focus on setting up and using Outpost (www.outpostpm.org).

Registration is required for this workshop. There is no fee, but we must be expecting you. The registration deadline is at noon on Wednesday, FEB 16. For more information and to register, visit: www.w9tca.com/packet-workshop

Attendees are encouraged to bring their laptop (Windows 98 SE or later), TNC (with manual), and connecting cables. You may also bring your radio and antenna/dummy load, if you like, as we will have a working PBBS/node/digi on the air at the training facility. Access to 110V AC will be provided, but you may want to bring an extension cord/power strip, and a 12V DC power supply or battery for your TNC/radio, if you have it.

The recommended TNC is the Kantronics KPC-3/KPC-3+, which has become pretty much the packet standard in amateur radio. Other models/brands of TNCs will also do, as will AGWPE, if you have it already configured and working with Outpost. A list of TNCs known to work well with Outpost can be found here: www.outpostpm.org/support.html

If you plan to attend, be sure to arrive early to connect and set up your equipment, as the workshop will start promptly at 9:00 a.m. Workshop location, more details, and registration at: www.w9tca.com/packet-workshop

From: Mike Wolford
Topic: 2683 Message: 2686

I actually saw one of my old KPC-II's the other day --- ahhhh, memories!
They do fill a shack, when you have four of them hammering away on different
bands! (2 on two, 1 on 220, and 1 on HF)

TNCs, computers, and radios, all talking at the same time. Makes for some
interesting lessons in RFI and grounding EVERYTHING to EVERYTHING!!!

I'm actually surprised that packet is still around... but then if all else
DOES go away, it is a whole lot better than passing traffic by voice (OR
RTTY at 60 baud!)

Mike N5CEC

Brian,

I looked around here and the only drive I have that is IDE is a 12o gig however it may be that you can still use the SATA with the old system if you are not looking for break neck speed.

I also have a 20 gig drive, you can have for the HP if you wish, then you can take that SATA, get an adaptor cable from Tiger and use the 20 gig to boot to and the 250 for storage via the USB.

There are several ways to go, if you like give me a call and perhaps we can get you going. 3117-247-1438

Rhonda,

What is the per person cost for dinner at Fogo? We ate there a year ago and it was GREAT but I think I remember it being "fine" dining and costing a little more than normal. Well worth it though.

Brian,

If memory serves me right it's around $50 per person. I know that not everyone will go there but we go about once a year and it's a fun experience as well as really good food.

Thanks,

Rhonda

2693. Re: the Curtis' monthly ham dinner.

Yahoo group: IndyHamRadio
Date: 2011-01-26 15:06:13 UTC
From: kc9brz
Topic: 2693 Message: 2693

You do know that the dinner price at Fogo is $46.50 plus drink, plus tax, plus tip, right?

Some of the sides are included in the price, but they also push some other side dishes that are not included in the $46.50 price, without telling you they are extra.

Lunch price is $26.50 (plus drink/tax/tip).

If you do not get any meats, just the salad bar, the price is $19.50, for both lunch and dinner.

So lunch is the best deal.

It's a VERY elegant restaurant, so I would also advice dressing up (coat and tie for guys.) I've eaten there once each for lunch and supper, to say I've been there. But it's just too expensive.

For me, splurging means going to Chik-Fil-A instead of Hardee's.

It is not inexpensive...but it is tasty.

I have been to Fogo about 4 or 5 times, but I have always been there for a lunch meeting or a lunch presentation for my employer...so they picked up the tab.

They do have a marvelous salad bar mix.

The Full Dinner with tax, tip, and a coke will run you $62 or so....give or take a few nickles. (20% tip, 8% tax, $2 coke)

It's a nice place. I like Morton's too. St. Elmo is less expensive and very good as well.

I'd like to thank Rhonda and Steve for setting these dinners up though, it's not easy.

"Elegant" is subjective. I've eaten at restaurants in Boston, Chicago,
Las Vegas, and Phoenix that were more elegant, in my opinion.

I've had lunch twice at Fogo wearing business casual attire. No problem.

Bob...

2697. Re: [IndyHamRadio] Re: the Curtis' monthly ham dinner.

Yahoo group: IndyHamRadio
Date: 2011-01-26 17:11:38 UTC

Topic: 2693 Message: 2697

The one and only time I went there I wore jeans and a nice top. Nobody said anything.

This is not our monthly dinner...it's just somewhere that we go once a year during the winter months. Last time there were 7 of us so we do not expect a big crowd but with more than 4 of us, we need reservations so I wanted to open it up to anyone who wants to attend. It's just friends getting together for the evening.

Thanks

Rhonda

I would also add...to most hams I know...business casual is what they get buried in. I will be wearing jeans and a button down dress shirt. I won't be in dirty jeans and a old T-shirt, although for the prices they charge I ought to be able to come and eat in whatever I want....grass skirt and coconut shells perhaps...

My wife says I WILL be wearing shoes, and I have promised to brush my tooth.

I would be willing to pay Fogo's outrageous price of $46.50
(plus tax/tip) to see you wearing a grass skirt and a
coconut shell bra.

(Ummm, but don't take that the wrong way.)

> I would also add...to most hams I know...business casual
> is what they get buried in

Yeah, that fits. (ie, business casual == dressing up.)

Threat to 440

The word here is to do nothing yet. But you need to be aware of the news -

http://www.arrl.org/news/spectrum-management-bill-threatens-amateur-frequencies

As soon as we contact a few more people and have more specific info, the Legislative Alert newsletter will be coming out with a coordinated plan on how to deal with this. Meanwhile, read and learn.

Allen Pitts, W1AGP

Subject: URGENT: HR 607 - Threat to Amateur Radio Spectrum

23 FEB 2011 - 1502 CST

Fellow Central Division Members:

Most of you have probably already received email message inserted inside this message. If this is the first time you have received it, I urge you to act on this spectrum pprotection issue as soon as possible. However, I want to add information that applies to all such email letter campaigns.

1. Always avoid emotional statements regardless of how strong you may feel about a particular issue. The saying "You can catch more flies with honey than with vinegar." should be the guiding principle in your email letter to your elected representatives. Do not make threats or call anybody names - this is totally counterproductive.

2. I encourage you to personalize your letter, but please keep item #1 in mind.

3. Do not send your letter directly to your representative via the U.S Postal Service. It will be delayed as much as eight (8) weeks for detailed inspection for anthrax contamination and other nasty things. Then your letter will arrive with a lot of other non-related mail and will have far less impact. If you want to send a paper letter, please mail it to our paid lobbyist, John Schwat.

4. Please send your email letters to our lobbyist, John Schwat. He will print them and deliver them in person to your elected federal representatives.

A couple of key points to remember when discussing our opposition to HR 607:

A. We understand and support the principle that Public Safety and First responders should have the D-Block frequencies.

B. Our opposition to the bill stems from the inclusion of the 420-440 MHZ Amateur allocation as part of the proposed "frequency swap".

Time is of the essence on this request, as HR 607 is gathering steam in Congress. Please send your email letters ASAP.

==========

A new bill, "Broadband for First Responders Act of 2011" in the U.S. House of Representatives (HR 607) includes provisions to auction off a portion of the 70cm band allocated to amateur radio. The ARRL is asking hams to contact their representatives and ask them to oppose this bill.

More information on the bill and how to communicate with your representative can be found at:

http://www.arrl.org/news/spectrum-management-bill-threatens-amateur-frequencies

There is also a sample letter and information on how to identify your representative on the website.

http://www.arrl.org/sample-letters

2712. March Ham Radio Dinner

Yahoo group: IndyHamRadio
Date: 2011-03-01 19:47:25 UTC
From: Rhonda
Topic: 2712 Message: 2712

This is an invitation to join us for our monthly ham radio dinner on Saturday, March 19th at 7pm at Napoli Villa Italian Restaurant, 758 Main St., Beech Grove, IN. This is real Italian food as is worth the trip to the southeast side.

The dinner is open to all ham radio operators and their families. We are not affiliated with any group or club...we just like to get together with other hams and eat and tell stories.

If you have never joined us before and would like to, our reservation is under Curtis. Show up and have them send you our way. We welcome anyone who shows up.

We look forward to seeing you all there!

Steve & Rhonda

2713. How's the 10meter band doing?

Yahoo group: IndyHamRadio
Date: 2011-03-01 20:20:52 UTC
From: kc9brz
Topic: 2713 Message: 2713

The solar-cycle is on the upswing, so conditions on the 10 meter band "should" be improving.

Is anyone having any daily success on 10 meter yet?

I'm wondering if the cycle is far enough along where it would be worthwhile getting out my 10m rig and antenna.

Will there be anywhere available to conduct VE testing? I know when I tested two years ago at the ham fest it was a very busy session. If we can find a place on-site, I would be more than happy to hold a session.

Yaesu Temporarily Suspends Production

After Earthquake- All Vertex Standard

employees and their families are said to be safe.

cq-amateur-radio.com

Production of Yaesu radios at Vertex
Standard's factory in Fukushima, Japan, has been
temporarily halted due to earthquake damage.

In an open letter to the amateur radio community,
Vertex Standard CEO and President Jun Hasegawa
expressed his gratitude for the many "kind words
and thoughts about us during this difficult
time." He reports that all Vertex Standard
employees and their families are OK, although the
company has not been able to reach its many
dealers and subcontractors located near the
coast. "We just hope that they are alive," he
writes.

Hasegawa also reports that the Yaesu factory in
Fukushima suffered "minimal" damage from the
earthquake but has been temporarily shut down
nonetheless. He says he expects it to be back in
normal operation within one to two weeks and asks
for everyone's understanding and cooperation.

At this time, there have been no public reports
received from any of the other Japanese amateur
radio manufacturers.

From the CQNewsroom
News and information of interest to ham radio operators from CQ Amateur Radio magazine, the world's leading independent ham radio magazine.

Kenwood: Production Unaffected by Japanese Earthquake and Tsunami
The president of Kenwood USA says the company's staff in Japan is safe and facilities there are undamaged. In addition, says Junji Kobayashi in a statement posted on the company's website (www.kenwoodusa.com), there has been no impact on Kenwood's equipment production since its main factories are located in Malaysia.

Kobayashi said Kenwood's corporate offices are south and west of the quake zone, but "power outages and interruption of mass transit have kept most of Kenwood's staff at home since the earthquake." However, he says, "we expect the infrastructure to improve in the coming week and our operations to fully resume accordingly."

"We appreciate the concern for our employees expressed by all those who have contacted us," Kobayashi added. He promised additional updates as conditions warrant.
Posted by CQ Newsroom at 6:25 PM

ICOM: Staff & Factories OK - Other Issues May Slow ProductionICOM America says the company's facilities in Japan suffered only minor dama ge from the March 11 earthquake, but that there may be interruptions in its supply chain from vendors in the quake/tsunami zone and that other issues, such as rolling power blackouts, may slow production.

Ray Novak , N9JA, ICOM America's Division Manager fo r Amateur and Receiver Products, released a statement reporting that no one on the company staff is known to have been injured as a result of the earthquakes or tsunami. "There are no damages reported at Icom's headquarters in Osaka or at either of our two main factories in

Wakayama," the statement says. "Both Osaka and Wakayama are located far south of the most severely affected areas. Icom did suffer some minor damage at our Tokyo and Sendai branch offices."

"Most of Icom's facilities and systems are ready to get back to normal business," the statement continued. "However, supplier logistics, commuting issues and future power disruptions will affect our company. It is too soon to tell how big an impact the earthquake and its aftermath will have on Icom."

The statement concluded with a request for donations to help with disaster relief efforts: "We are fortunate that most of the Icom family has so far survived this crisis intact. Other families have not been so fortunate, and many lives have been lost. Crisis relief donations are requested through the American Red Cross at www.redcross.org. Google has also posted a helpful crisis response page on how to get involved."

Yaesu Update - Some Production Continues in China
Some production of Yaesu amateur radio equipment continues, according to Dennis Motschenbacher, K7BV, Executive Vice President of Yaesu Amateur Radio Sales.

Yesterday, company president Jun Hasegawa announced that production at Vertex-Standard's factory in Fukushima, Japan, has been suspended due to earthquake damage. However, Dennis informs us that Yaesu also has a plant in China that is in full production.

2730. Japan disasters.

Yahoo group: IndyHamRadio
Date: 2011-03-30 04:18:56 UTC
From: kc9brz
Topic: 2730 Message: 2730

Is anyone hearing from ordinary ham radio citizens in Japan?

I just read in a UK newspaper web site, that the core of #2 reactor
in Fukushima has totally melted through the containment vessel.

The cores melted in all 3 reactors that were running at the time of the quake/tsunami, #1, and #2, and #3.

But this total melt-down, or melt-THROUGH on the #2 reactor is the
worst thing that could happen. It came out through the bottom.
(Note: 3 Mile Island had a melt-down, but it all remained in
the containment vessel, there was NO leakage at all.)

One nuke engineer in the US tells me this means that a 20 mile radius
around the plant will not be able to be inhabited by humans, basically forever. And they they will have to build a sarcophagus over the #2 reactor, like in Chernobyl.

BTW, the Japanese only evacuated a 12 mile radius around the plant.

I've been reading about this as well. There have been numerous reports of plutonium being found in freshwater wells, and in coastal seawater. One Japanese engineer was quoted as saying the only way this could happen is if coolant is actually leaking out of the pile into the bare earth. That means the containment is no longer containing, just merely hindering the spread of radiation.

Yesterday the Japanese government said that radiation being leaked in to the North Pacific is of little concern because of the vastness of the ocean. I wonder how Russian and Alaskan fisherman feel about that?

I wonder if Harbor Freight has a good deal on Geiger Counters....Amazon has small hand held models from $300 and up.

Ever wonder how much food we eat, comes from Japan, Alaska, and that area? We will certainly be reading our labels a bit closer now.

D-STAR Infrastructure Promotion

Program Details:
From April 25, 2011 – May 9, 2011, your club can purchase directly from Icom America Inc, either a 2m or 70cm D-STAR repeater for US$3,000 (plus freight and applicable taxes).
Repeater Components in this program for $3,000
Controller
RF Module
Gateway Software ID-RP2C
ID-RP2000V or ID-RP4000V
RS-RP2 G2

Bonus: If you can meet the following requirements within 90-days from the date of purchase, Icom will refund the original purchase price (US$3000).
* Install in permanent location identified at the time of purchase
* Fully operational on the USROOT trust server with Icom G2 Gateway Software and within the requirements outlined by the USROOT Administration team
* Minimum of 10 users registered on the "Gateway"
* Guarantee system on air for minimum of 1 year from date of installation
This program is limited to the first 70 qualifying clubs located in priority areas listed below or not within an existing D-STAR Repeater (100 Aeronautical Mile Radius). Send a club biography and an outline of how D-STAR will be used in your community toDSTAR.Promo@... to see if your club qualifies.
Priority areas:
Washington (Eastern) Western Texas Kentucky
Idaho Nevada (North) Illinois (Southern)
Montana North Dakota Indiana (Southern)
Wyoming South Dakota Arkansas
New Mexico Minnesota (Northern) Nebraska
New York (Up State) Wisconsin (Northern) Kansas

Limitations:
This promotion is for U.S. residents only. Applicants cannot be affiliated with employees of Icom, Inc., including any parent, subsidiary or entity affiliated with Icom, Inc. or the distribution channels of Icom products.
For more information about the D-STAR Promotion: DSTAR.Promo@...m
For more information on D-STAR:
www.icomamerica.com/en/products/amateur/dstar/dstar/default.aspx
For more information on registering on the gateway:

D-STAR is a an open protocol developed by the Japan Amateur Radio League. However, it is based on a proprietary codec developed by Digital Voice Systems, Inc., to convert analog voice to-from the digital domain. At this time, Icom is the only company marketing commercially-available radios for D-STAR. And the term D-STAR is a registered trademark owned by Icom. Some "open-source" hardware is now available.

Here's a link to the Wikipedia article on D-STAR:

From: kc9brz
Topic: 2747 Message: 2747

Yes and no.

Yes, only Icom radios currently support D-star.

No, it's an "open standard", and any manufacturer can join the party if they want to.

The standard was established by JARL, Japan Amateur Radio League. But apparently, the only manufacturer who was in on the development was Icom.

I can understand why the other manufacturers are hestitant. "Not-invented-here" syndrome, and, PR-wise it would not be good to have to say "Yes, we're Icom-compatible."

The price differential of the D-star versus non-D-star is coming down. It's $130 to $140 extra for the hand-held and mobile models with D-star built in. But I can think of more useful toys for those dollars.

Is D Star an Icom only feature?

2748. Re: Icom's Dstar repeater promotion

Yahoo group: IndyHamRadio
Date: 2011-04-23 17:30:15 UTC
From: Mark
Topic: 2744 Message: 2748

The intention of the promotion is to get D-STAR repeater coverage in areas currently with no D-STAR repeaters.

Like FM repeaters 35 - 40 years ago most wait until the local repeater goes up to buy a radio.

2749. Re: Icom's Dstar repeater promotion

Yahoo group: IndyHamRadio
Date: 2011-04-23 17:49:51 UTC
From: Mark
Topic: 2744 Message: 2749

Most new technologies are patented. In fact,
many modes & technologies hams currently use were once patented such as SSB, FM & superhetrodyne circuits.
By the time hams started using the technologies the patents had often already expired.

The vocoders by DVSI such as AMBE, AMBE+2 & IMBE used in D-STAR, APCO P25, & NXDN digital radios are all patented.
However, the technology can be licensed or bought in firmware. That is how P25 digital scanners can scan P25 public safety.
In fact, an IC containing the AMBE vocoder used in D-STAR is about $20 each in small quantities.

Icom enhanced D-STAR by building an entire ecosystem including the repeater controller & internet gateway.
They did not document how this system works, but some hams have reverse engineered it and now produced various non-Icom D-STAR devices.
The DV Dongle allows you to connect a Dongle via USB to your PC to access the D-STAR network without a D-STAR radio.
Software & hardware has been developed to allow some FM radios to use D-STAR and some FM repeaters to retransmit D-STAR & integrate into the D-STAR network.

2751. IHAB 4 Laucnhes at 11AM EST Today

Yahoo group: IndyHamRadio
Date: 2011-04-30 13:46:38 UTC
From: KB9BVN
Topic: 2751 Message: 2751

The Iowa High Altitude Balloon project is making it's 4th launch
this morning at 11AM Eastern, (15:00Z) from Cedar Rapids, Iowa.

A major milestone is that science student's cannister experiments will
be carried aloft and analyzed upon recovering the payload.

One of the goals of this launch is to do a remotely triggered cut down
at 75,000 feet, or over the Mississippi River, whichever comes first.
The tether between the payload and the balloon will be severed from a
ground command. A test of the cutdown circuit at low temperature can
be viewed here http://www.youtube.com/watch?v=S4voKhzUflM

As on the last flight, a 2M simplex repeater will be operatiing on
147.500 PL TONE 100.00.

The 20M CW beacon will be operating again on 14.058 sending IHAB4
W0OTM

You can monitor the flight path at http://aprs.fi/?call=a%2FW0OTM-4

Feel free to post signal reports on QRPSPOTS.com

Enjoy the flight.

I love this radio stuff !

Indiana QSO Party, Saturday, 5/7, Noon to Midnight EDT

www.hdxcc.org/inqp/rules.html

CQ INQP CQ INQP
Sponsored by HDXCCthe Hoosier DX and Contest Club

2011 Indiana QSO Party Rules
1. Objective: For Amateurs worldwide to contact as many stations in Indiana as possible on the 160, 80, 40, 20, 15 and 10 meter Amateur bands.
2. Date and Contest Period: Contest starts at 1600 UTC Saturday and ends at 0400 UTC Sunday the first full weekend of May. (Saturday noon to midnight EDT or 11am to 11pm CDT.) For 2011, this is May 7-8. All stations may operate the full 12- hour period.
3. Entry Categories:
* Single-operator (High Power, Low Power or QRP). One person performs all logging, spotting, and operating functions.
* Low Power is transmitter output of 100 watts or less.
* QRP is transmitter output power of 5 watts or less.
* Multi-operator single transmitter (Multi-Single). Only one signal is permitted on the air at any time.
* Multi-Operator Multi-transmitter (Multi-Multi). Fixed stations (only) may operate without limit on the number of operators, transmitters or signals per band.
* Mobile. Mobile is defined as a self-contained single or multi-operator station, capable of legal motion (land, water or air), motion optional. A mobile station that at any time uses a larger antenna incapable of being used in motion is considered a rover (see below).
* Portable. A single transmitter station set up in a temporary location with temporary antennas (Field Day style). Portable stations may be either single or multiple operator.
* Rover. A portable, or a mobile station using larger (non-mobile) antennas, that operates from more than one location.
* A portable station may move (in entirety -- antennas included) to a new county or county line, thereby becoming a rover.
* Rover stations may be worked again when they change counties (same as mobile stations).
* Operation while mobile is permitted.
* A county line mobile, portable, or rover may operate from only one or two counties at a time. In other words, three and four county operations are not allowed.
* Multi-Multi entrants may transmit any number of signals simultaneously. All others may transmit only one signal on the air at any given time.
* There is no "Assisted" category. Therefore, stations using spotting assistance shall enter as Multi-Single or Multi-Multi. Self-spotting is not permitted.

* Fixed stations must enter as Single-operator, Multi-Single or Multi-Multi only.
4. Contest Exchange:
* Indiana stations send RS(T) plus Indiana county.
* Non-Indiana stations in the USA and Canada send RS(T) and state, province or territory.
* All others (DX) send RS(T) only or RS(T) plus "DX".
5. Scoring:
QSO points:
* Count one point for each complete two-way phone QSO.
* Count two points for each complete two-way CW QSO.

* Stations may be worked once in each mode (CW/phone) on each band (160, 80, 40, 20, 15, 10). The same fixed station could theoretically be worked twelve times. Exception: Mobile and rover stations may be worked in each county of operation. For example, you may rework the same mobile station in both modes on every band every time the mobile moves to a new county.
* Stations on county boundaries may be worked for multiple county credit (stations need not physically move to declare a new county). Contacts with such stations should be logged as multiple QSOs. For example, a contact with a mobile parked on the boundary between two counties should be logged as two QSOs, one for each county.
* Non-Indiana stations may work only Indiana stations.
* Repeater, cross-band and cross-mode contacts are not allowed.
Multipliers:
* Non-Indiana stations:
* The 92 Indiana counties (see Section 9).
* Indiana stations:
* The 92 Indiana counties (see Section 9).
* The other 49 U.S. states (District of Columbia counts as Maryland).
* The 13 Canadian Provinces/Territories: NB, NS, QC, ON, MB, SK, AB, BC, NT, NL, YT, PE and NU.
* Multipliers count once per mode (i.e. once on CW and once on phone). This means you can double your possible mults by working both modes.
* Indiana stations may work DX stations for QSO point credit, but there are no DX multipliers.
Final Scoring:
* Multiply QSO points by total multipliers.
Example #1: KX9IO (in Indiana) has 354 non-duplicate CW QSOs with stations in 39 states/provinces and 27 Indiana counties and 292 non-duplicate SSB QSOs with stations in 41 states/provinces and 32 Indiana counties.
Total score = ((354 x 2) + 292) x (39 + 27 + 41 + 32)
>Total score = 1000 x 139
>Total score = 139, 000
>Example #2: WX5ZR (outside Indiana) has 103 non-duplicate CW QSOs with stations
>in 24 Indiana counties and 42 non-duplicate SSB QSOs with stations in 12 Indiana
>counties.
Total score = ((103 x 2) + 42) x (24 + 12)
>Total score = 248 x 36
>Total score = 8928

>
6. Club Competition:
In addition to individual awards, there is an award for the Indiana Amateur Radio Club whose members turn in the highest total aggregate score.
* Clubs must be legitimate radio clubs, meeting FCC requirements for club licensing. Clubs need not have a club license or be members of the Indiana Radio Club Council to qualify. The sponsor of Indiana QSO Party, currently the Hoosier DX and Contest Club, is not eligible for this award.
* Logs turned in by a club's members must be for contacts made from within the state of Indiana for the Indiana QSO Party.
* Club members must CLEARLY indicate only one club affiliation when submitting logs. Cabrillo format logs should show club affiliation in the log header lines. Submissions using other log formats should be suitably marked.
* To be eligible for the club competition award, at least three club members must participate. One of the following conditions must be satisfied:
* at least three club members submit individual logs meeting the above requirements for single operator logs, or
* the club submits a single log for a multi-operator single transmitter (multi-single) station with at least three club members shown as operators, or
* the club submits a combination of single and multi-single station logs to meet the minimum participation requirement.
* It is not necessary for a log to be from a station using a club's call sign, although the activation of club stations is encouraged.
7. Awards:
* The top scoring fixed station (high power, low power, and QRP), portable, rover, and mobile in Indiana and the top scoring station outside Indiana will receive plaques. Plaques may also be awarded for top single operator entries from W1 and W7 call areas (New England QSO Party and 7QP) and for the top multi-single Indiana station. Other plaques may be awarded if sufficient activity and effort warrant them.
* The top scoring club (aggregate score of three or more members' logs from Indiana operations) will receive a plaque.
* Certificates for each entry category, each Indiana county, each state/province/territory and each country will be awarded where significant effort or competition is evident.
8. Log Submissions:
* Computer generated logs must be submitted as an ASCII text file with Cabrillo format strongly preferred. Logs may be sent via e-mail toinqp@.... Please name both the log file and your summary sheet file with your call (e.g., KJ9D.SUM, KJ9D.LOG, etc.).
* Paper logs can be submitted by mail to HDXCC, c/o Mike Goode N9NS, 10340 Broadway, Indianapolis, IN 46280-1344.
* Logs should be submitted no later than June 15, 2011.
9. Suggested Frequencies:
* CW: 1.805 MHz and 30 kHz up from the band edge on 80-10 meters. A window for only mobiles to call CQ should be observed from 35 to 40 KHz up.
* SSB: 1.845, 3.820, 7.190, 14.250, 21.300 and 28.400 MHz.
* Try 160 meters at 0200 UTC.
10. Web Site: www.hdxcc.org/inqp Please visit the web site for additional information including:

* A list of Indiana counties and abbreviations
* Indiana county map
* Notes on compatible logging software
* Mobile and county expedition plans

2755. Indiana QRP operators WANTED

Yahoo group: IndyHamRadio
Date: 2011-05-03 14:56:07 UTC
From: Brian Murrey
Topic: 2755 Message: 2755

Posted on behalf of the QRP Amateur Radio Club International (QRP-ARCI)
http://www.qrparci.org

The year 2011 will mark QRP ARCI's fiftieth or Golden Anniversary. In 1961, we started out as a 100 watt club interested in reducing QRM, and have transitioned into a group of operators, hikers, builders/experimenters, and contesters that pursue this great activity at five watts or less.

One way the club will mark this anniversary is to activate the club call in all 50 states, Puerto Rico and the District of Columbia throughout 2011. A QRP ARCI member/volunteer will be assigned one week during the year in which they can use the club call, K6JSS from their location. We encourage them to operate with K6JSS with as many modes and as often as possible during their assigned week. A special "Worked All States" certificate will be issued to all that qualify.

The club needs volunteers to make this happen. We need one member/volunteer from each state, Puerto Rico and the District of Columbia. The member will agree to operate using K6JSS during their assigned week. They will also send a copy of their logs for the week to logs@... . John Burnley, NU0V has volunteered to coordinate this effort for the club. He will work with volunteers to assign a week for their area and insure that the club trustee is notified. If you wish to volunteer, send an email to John at nu0v@... . He needs your call and location plus any weeks during 2011 that are not good for you.

I hope to see all 50 states plus Puerto Rico and the District of Columbia on the air during 2011.

To: IndyHamRadio@yahoogroups.com
Date: Monday, April 4, 2011, 12:59 PM

I am looking for a mobile 2m only radio to use at home for weather nets and the like. No HT's. It needs to be able to do tones and have 35w output or more, and a working mic. Cheap, used, working.

Got anything? Let me know.

2759. May Contest: Hoot Owl Sprint

Yahoo group: IndyHamRadio
Date: 2011-05-06 12:50:42 UTC
From: Brian Murrey
Topic: 2759 Message: 2759

DATE/TIME:

8pm to Midnight LOCAL TIME on 29 May 2011.

OBJECTIVE:

To test your ability to make contacts late into the evening local time.

MODE:

HF CW Only.

EXCHANGE:

Members send: RST, State/Province/Country, ARCI member number
Non-Members send: RST, State/Province/Country, Power Out

QSO POINTS:

Member = 5 points
Non-Member, Different Continent = 4 points
Non-Member, Same Continent = 2 points

MULTIPLIER:

SPC (State/Province/Country) total for all bands. The same station
may be worked on multiple bands for QSO points and SPC credit.

POWER MULTIPLIER:

>5 Watts = x1
>1 - 5 Watts = x7
>250 mW - 1 Watt = x10
>55 mW - 250 mW = x15
55 mW or less = x20

SUGGESTED FREQUENCIES:

160m 1810 kHz
80m 3560 kHz
40m 7030 kHz (please listen at 7040 kHz for rock bound participants)
20m 14060 kHz
15m 21060 kHz
10m 28060 kHz

SCORE:
Final Score = Points (total for all bands) x SPCs (total for all
bands) x Power Multiplier Bonus Points.

BONUS POINTS:

If you are operating PORTABLE using battery power AND a temporary antenna, add 5000 points to your final score. (You can NOT be at your shack operating from battery power using your home station antenna to qualify for this bonus.) This is to help level the playing field for contesters who work from the field against contest stations with 5 element yagis at 70 ft.

CATEGORIES:

Entry may be All-Band, Single Band, High Bands (10m-15m-20m) or Low Bands (40m-80m-160m)

HOW TO PARTICIPATE:

Get on any of the HF bands except the WARC bands and hang out near the QRP frequencies. Work as many stations calling CQ QRP or CQ TEST as possible, or call CQ QRP or CQ TEST yourself! You can work a station for credit once on each band.

LOG SUBMISSION:

Email Submission: Submit Logs in plain text format along with a summary stating your Callsign, Entry Category, Actual Power and Station Description along with score calculation to contest@...

Snail mail Submission: Submit Logs along with a summary stating your Callsign, Entry Category, Actual Power and Station Description along with score calculation to:

ARCI Hoot Owl Sprint
c/o Jeff Hetherington, VA3JFF
139 Elizabeth St. W.
Welland, Ontario
Canada L3C 4M3

Deadline:

Entries must be postmarked on or before 30 June 2011.

RESULTS:

Will be published in QRP Quarterly and shown on the QRP-ARCI website.

CERTIFICATES:

Will be awarded to the top scoring entrant in each category, as well as the top scoring entrants from each State, Province and Country. Certificates may be awarded for 2nd and 3rd place if entries are sufficient in a category.

2760. Rant time

Yahoo group: IndyHamRadio
Date: 2011-05-07 17:18:13 UTC
From: Brian Murrey
Topic: 2760 Message: 2760

Ok I'm working the IN QSO Party on 40m, CW, and QRP. I was sitting on 7041, in the quiet, happily CQing for contacts and making several when this BOOMING Indiana station calls me. We do the exchange, I say 73 dit dit and THEN the jerk fires up and starts CQing on the frequency I was using. I looked his call sign up, and this guy CERTAINLY knows better than to pull that stuff.

For those that don't get it: Etiquette on HF says when you answer a CQ, you do not then start CQing at the end of the QSO. The use of the freq still belongs to the original station that sent out the CQ that you answered. If the CQing station is going QRT and has told you that, or there is silence for say a minute or so, then feel free to start your own CQing session on that frequency.

Ok..I feel better. Back to CQing.

Oh, my 5w has no chance of drowning out his 1 KW legal foot warmer.

I just got a phone call from Dave Keiser, WB9UNL. Dave had a heart attack yesterday, 5/12/11, and is in the CCU at Parkview Hospital on Randalia Drive. He had a stent put in and is feeling fine. He will be in the hospital for 3 - 4 days as they also need to regulate his blood sugar. Dave is a net control operator on the IMO net and in charge of inside traffic for the Fort Wayne Hamfest among other activities. I think Dave would appreciate get well cards and please include him in your prayer

2766. Fwd: [kyham] Special event from Falls of the Ohio park

Yahoo group: IndyHamRadio
Date: 2011-05-13 22:02:24 UTC
From: Dan Evans
Topic: 2766 Message: 2766

Group,

Just wanted to let everyone know the Clark County Amateur Radio club will be putting together a station, and public display of ham radio, tomorrow at the Falls of the Ohio State Park in Clarksville, IN.

You will likely have to listen close to work us, but we will be trying:-)

The event will run from 10:00am til 4:00pm.

I will have my 897, and an R7000 vertical. We also plan to have an '817 along for some CW and digital modes. I'm also bringing along a 6 meter beam and hoping for a band opening.

I'm not sure what call we will be using. The club has W9WWI, and W9JBQ. Or we may use our own calls, look for K9ZF, N9WSV, WD4IXL, or maybe even N9TV:-)

If you work us, QSL direct to K9ZF and I'll put together a special QSL card! SASE appreciated, but not required.

2767. New at Dayton: Elecraft KX3

Yahoo group: IndyHamRadio
Date: 2011-05-21 20:44:08 UTC
From: N9NWO
Topic: 2767 Message: 2767

This is the only new rig I have heard about this year. Anyone see anything else?

KX3: Ultra-compact K3/KX1 hybrid, 160-6 m, 10/100 W, all-mode, 32-bit DSP/SDR, 1.5 lbs. Price is about $700.

Same flat layout as the KX-1 - just bigger box one would assume, but with new fold-up rear tilt-feet.

The ATU is an internal optional module.

The battery pack/charger is also an optional, internal module. (5W with battery pack, 10W using power supply). RX-mode current drain ~150 mA. Very efficient on TX, with dual-output-impedance 5W/10W PA. The MOSFET 10-W amp stage includes an output transformer with both 1:4 and 1:1 windings. When using low power, or when running from internal batteries, the 1:1 winding is used, which optimizes efficiency at about 5 W, greatly reducing transmit current drain. The 1:4 winding is used when running higher power (using an external supply).

Optional roofing filter module. 500/1500/2700/3800 Hz.

Optional 100W PA plus automatic tuner (ATU). The 1.5-pound radio itself puts out 10 watts+. Elecraft also be describing a new, high-performance 100-watt+ companion amplifier/ATU for fixedstation/mobile use. It will work very well with other 5 to 10-W radios besides the KX3. It has a switch for 5 watt or 10 watt max drive level. It will interface directly with any rig that has a KEY OUT line. Also supports some rigs' band control lines.

The microcontroller is like, but not the same as, the one in the K3. The DSP is a new, 5th generation device designed for extremely low power consumption, yet with performance exceeding that of the one in the K3. It is Software defined radio (SDR) with the features and power that FlexRadio 3000 has but uses an internal microcontroller rather than external PC.

The KX3 receiver includes I/Q outputs for use with a PC soundcard. This allows you run various a third-party application software on an attached PC, such as a spectrum display.

Of course, no PC is required to use the KX3; it is a complete, self-contained radio. With appropriate options (battery pack w/charger, ATU) it becomes a complete, self-contained 160m-6m radio station.

Harbor Freight has a one-sheet ad/coupon flyer in today's, Sunday,
May 22, 2011 Indianapolis Star.

Indianapolis store locations:
4200 S. East Street. (South side, just north of I-465, at US 31 exit.)
5703 E. 86th St. (NorthEast side, immediately north of Castleton Sq Mall.)

Coupons of note to techies/radio/hobbyist folks:

(At first look, at least some of these print-coupon prices are
cheaper than the online coupons they send to their email list.)

Digital Multimeter, $3.

Free 6 piece (cheapy) screwdriver set with any (non-coupon) purchase.

20% off any one regularly priced item.

Weatherproof color security camera with night-vision, $30.

105 piece tool kit with 4 drawer chest, $35.

Battery float charger, $5.

800 Watt (900 watts max) portable generator, $90.

10/2/55 Amp, 6/12 Volt Battery Charger/Engine Starter, $30.

3/4" x 60 feet electrical tape, $.49

Headlamp with swivel lens, $2.

3 gallon, 100 psi, oil-less pancake air compressor, $40.

-end-

ARRL Atlantic Division to Host Two D-STAR Webinars

05/23/2011

Periodically, the ARRL's Atlantic Division hosts a "webinar" -- an interactive Web-based seminar, designed to facilitate communication between a small number of presenters and a large remote audience using the Internet. Atlantic Division Director Bill Edgar, N3LLR, and the National Capital Region D-STAR Association will present a two-part webinar discussion on D-STAR technology and its application to emergency communications. Anyone can register for these informative, interactive Internet meetings; you do not need to reside in the Atlantic Division to join in.

Part 1 will be presented on Wednesday, May 25 at 9 PM (EDT). This 90 minute webinar -- entitled D-STAR Basics -- will provide a general introduction to the topic of D-STAR and compares the technology to existing Amateur Radio systems. Examples of D-STAR innovation will also be presented. Click *here* <https://www1.gotomeeting.com/register/327277537> to sign up for Part 1.

On Wednesday, June 8 at 9 PM (EDT), join in for Part 2 -- D-STAR and EmComm. This 90 minute webinar will provide a discussion on how D-STAR technology can benefit Amateur Radio EmComm scenarios. Examples of D-STAR applications to EMCOMM will also be presented, as well as future growth ideas. Click *here* <https://www1.gotomeeting.com/register/746329904> to sign up for Part 2.

2779. Radio Shack looking for input from DIYers

Yahoo group: IndyHamRadio
Date: 2011-05-27 16:16:08 UTC
From: Bob Burns W9RXR
Topic: 2779 Message: 2779

Yes, I am cross-posting this to several Indiana-related groups in an effort to cover a broad spectrum of Indiana hams.

Radio Shack is looking for input from DIYers. They've posted an article on their blog along with a short video from one of their Brand Managers. AND, they have opened up the blog article for comments. Over 700 comments have been left, so far.

I know many of us try to stock up on small electronic parts at local independent electronics shops or hamfests or we buy on-line from Mouser, Digi-Key, etc. But, I think we've all had situations where we've needed just one small component or connector to finish that project and waiting for a hamfest or UPS truck just isn't convenient. If only that nearby Radio Shack had what we needed.

So, here's your chance to let Radio Shack know what you think about their DIY parts selection.

http://blog.radioshack.com/post/2011/05/19/RadioShack-And-The-DIY-Community-You-Talked-Were-Listening.aspx

No, I don't work for Radio Shack.

You gotta give them some credit for at least asking the question.

I think someone at RS found out that interest in
DIY electronics or "maker" activities is
increasing. Google "maker faire" to see what I'm
talking about. Like any good marketing person,
when they see a potential market, they try to tap
it. Bear in mind, the person in that video is
almost young enough to be your daughter, so a lot
of RS's "institutional memory" may have been lost.

2782. Wanted: 2m mobile (25-30w)

Yahoo group: IndyHamRadio
Date: 2011-05-27 20:05:43 UTC
From: KB9BVN
Topic: 2782 Message: 2782

I am still looking for a cheap used but working 2m mobile radio. Capable of 25-50 watts output, CTCSS operation, and a decent working microphone. I don't need an antenna but if you have one to sell with the rig I'll take a look at it. Can't have too many antennas. I just want to use this for a home based weather net rig.

I'm wanting to stay under $100, new FT 1900R's can be had for less than $125 from several places.

If you have something, let me know.

2783. Flame Suit on...

Yahoo group: IndyHamRadio
Date: 2011-05-30 20:12:47 UTC
From: KB9BVN
Topic: 2783 Message: 2783

So you've recently passed the test and you now have your brand new Amateur Radio license in hand. Congratulations on a job very well done, and I sincerely welcome you to the fraternity. I hope you learn more about radio and electronics over the next few years than you ever knew before. Now that you have a VHF or UHF rig at your disposal, let's briefly discuss some operating habits.

1. In amateur radio, we have names. Not handles, not personals, just names. I know, it's more fun sometimes to say things like handle and personal, but let's try to stick to names. Sometimes a new guy or gal will forget and that's OK, just try to remeber when in the amateur bands, we use our names, and our FCC issued call signs.

2. There is no word "destinated". "Roger that", "10-4" and "Motion Lotion" are not amateur radio terms either. Although I have been guilty of using all four of those at one time or another.

3. Amateur Radio operators learn a standard set of phonetics for the English alphabet. You needed to know them for your test, so why not use them on the air like you're supposed to. Do you break the law by saying Big Violet Nighties instead of Bravo Victor November? I don't think so but it's not what other radio amateurs are expecting. Sometimes cute phonetics can cost you a nice DX contact because they can't understand what you're saying.

4. When you are keying your mobile to identify, it is a great idea to make sure the mic is keyed before you say your call sign. A lot of new radio amateurs have never used an old rig that has a half second delay between keying the mic and the relay in the rig opening the mic. So if you key the mic and just wait a half second before announcing KB9BVN Mobile, or Listening, or Monitoring...we'll all hear your call sign and know who you are...otherwise all we hear is VN mobile...

5. I'm the most guilty of this one, let the repeater drop between transmissions. If XYZ keys up and says his piece, wait until the repeater drops before keying your mic and jumping in there. I know, it's hard not to jump in on the tail end of a transmission...but there are other ops out there that might be waiting for a 2 second break so they can get a word in edgewise.

6. Pass it around...when in a group, like morning or evening drive time, when you are done with your transmission, GIVE the freq to someone. Example...and that's what I did this weekend, over to KB9BVN. Then KB9BVN says his and then sends it to another op in the group and so on and so forth. That way everyone that wants to be in on the conversation gets a chance to talk and we're not doubling and tripling all over each other.

7. When a person comes on the freq, and doesn't give his/her callsign, do not talk to them. It is against Part 97 to converse with an unlicensed station in the amateur radio bands. Yes, they're stupid. Yes, they're ugly. Yes, their mom wears combat boots. We all know that for a fact, so don't break the law and waste your breath by telling them on the air. Trust me, they already know it.

8. Another one I am guilty of, and must work to stop doing...Q codes. Q codes are for CW operators. Is it against the law to use Q codes on the FM repeaters? Not that I know of. It's just how how things are done though. You can't QSY to the kitchen.

I think that's it. This is not aimed at any one person in particular....or no people in particular...just my afternoon rant while I contemplate dinner.

Some of the newer repeaters will "time out" if a single person talks for too long, but you don't need to let the carrier drop before transmitting. The system detects that one carrier has gone off the air and will allow another person (or the same one) to key up without letting the repeater drop. I've had conversations on some of these newer repeaters where we talked back and forth for half an hour without letting the carrier drop out between transmissions.

Yeah but Zach...how long do you wait to key up after the other guy has stopped talking?

If you're not leaving enough time for another station to at least toss out his/her ID between your transmissions, then you're monopolizing a shared resource, the repeater. That's what I am getting at. If you talk long enough to time out the repeater, the first time you ought to be embarrassed, the second time you ought to be beaten with the wet ugly end of a wouf hong. You may not need to let the repeater drop completely but you do need to leave a couple of seconds in there for another station to break in if they need to.

Maybe for 5 or 10 seconds. One of our local repeaters doesn't drop out
for over 10 seconds after the last transmission ended.

From: Ray, K9DUR
Topic: 2783 Message: 2789

KB9BVN,

I will take exception to one statement that you made -- all without any intent to "flame" whatsoever.

Having been licensed for over 51 years, I can attest to the fact that amateur radio operators have "handles". Hams were using the term "handle" for their name long before I got my license, & long before the CB'ers stole the term as slang for what they use in place of a callsign. Using the term "handle" has fallen somewhat out of favor in recent years primarily due to the stigma attached to the use of the term on 11 meters. I regret that.

The use of the term "handle" is a part of the rich heritage of amateur radio and its unique lingo just as much as "ragchewing" and "73" are. I for one am in favor of a concerted effort to take back the term from the usurpers. No, I am not naive enough to believe that we will ever stop CB'ers from referring to their "handles", but I for one will continue to proudly refer to my name as my "handle" on the air.

KB9BVN,

Your point is dead on. In the case of many repeaters, the 146.685 machine in Terre Haute included, there is a "courtesy" beep 2-3 of seconds after a station stops transmitting. This serves the purpose of enforcing a break between transmissions to allow a station with an emergency a chance to get in. The "enforcement" part comes from the fact that the time-out timer does not reset immediately upon loss of input signal, but simultaneously with the beep..

Well said, and great advice for new comers!

As Ray was pointing out, a lot of the jargon actually started on the ham bands, migrated over to CB, and then makes the full circle back to the ham bands!

But, I always advise new ops that on 2m FM there is no need for jargon or Q codes. Speak just as you would if your were talking to the other op on the telephone....

That's pretty cool Zack. I wish they all did. I don't think I've ever really paid that much attention to it, I will though.

Maybe for 5 or 10 seconds. One of our local repeaters doesn't drop out
for over 10 seconds after the last transmission ended.

Ray,

I understand where you are coming from. I also think CBer (not that there is anything wrong with that) everytime I hear someone say "handle". I just wonder if the word is just fading from the vernacular within amateur radio as a whole. I've been licensed since 1988 and I look forward to joining the QCWA in a couple more years...but in my amateur radio career I have never heard the term "handle" used anywhere other than 11m citizen band. When I was an 11m user, I had a handle, and it wasn't my name. I think it was something like Kodiak Kid or Streaker....yeah it's been that long ago. <grin>

On CW I hear a lot of Name here is and OP HR is...but never heard "handle" on CW. Doesn't mean it doesn't happen, just means I have never heard it.

You still over there in Terre Haute? My dad lives out there, we're having a big party at Fairbanks Park in a few weeks to celebrate his 75th birthday.

Take care and 73

KB9BVN,

I will take exception to one statement that you made -- all without any
intent to "flame" whatsoever.

Having been licensed for over 51 years, I can attest to the fact that
amateur radio operators have "handles". Hams were using the term "handle"
for their name long before I got my license, & long before the CB'ers stole
the term as slang for what they use in place of a callsign. Using the term
"handle" has fallen somewhat out of favor in recent years primarily due to
the stigma attached to the use of the term on 11 meters. I regret that.

The use of the term "handle" is a part of the rich heritage of amateur radio
and its unique lingo just as much as "ragchewing" and "73" are. I for one
am in favor of a concerted effort to take back the term from the usurpers.
No, I am not naive enough to believe that we will ever stop CB'ers from
referring to their "handles", but I for one will continue to proudly refer
to my name as my "handle" on the air.

2795. FEMA Administrator Calls Amateur Radio “The Last Line of Defense”

Yahoo group: IndyHamRadio

http://www.arrl.org/news/fema-administrator-calls-amateur-radio-the-last-line-of-defense

05/25/2011
In an FCC forum on earthquake communications preparedness, Federal Emergency Management Agency (FEMA) Administrator Craig Fugate described the Amateur Radio operator as “the ultimate backup, the originators of what we call social media.” The forum-- held May 3 at FCC Headquarters in Washington, DC -- brought together officials from the White House, the Department of Homeland Security (DHS), the United States Geological Survey (USGS), FEMA, the FCC and the private sector. Fugate and FCC Bureau of Public Safety and Homeland Security Chief Jamie Barnett gave the opening remarks.
Later in the forum, Fugate spoke more on Amateur Radio. “During the initial communications out of Haiti, volunteers using assigned frequencies that they are allocated, their own equipment, their own money, nobody pays them, were the first ones oftentimes getting word out in the critical first hours and first days as the rest of the systems came back up,” he told the forum. “I think that there is a tendency because we have done so much to build infrastructure and resiliency in all our other systems, we have tended to dismiss that role ‘When Everything Else Fails.’ Amateur Radio oftentimes is our last line of defense.” Fugate said that he thinks “we get so sophisticated and we have gotten so used to the reliability and resilience in our wireless and wired and our broadcast industry and all of our public safety communications, that we can never fathom that they’ll fail. They do. They have. They will. I think a strong Amateur Radio community [needs to be] plugged into these plans. Yes, most of the time they’re going be bored, because a lot of the time, there’s not a lot they’re going to be doing that other people aren’t doing with Twitter and Facebook and everything else. But when you need Amateur Radio, you really need them.”
You can watch a video of the forum on YouTube at: http://www.youtube.com/watch?v=bzx-kvo1i_Y Fugate’s remarks begin at 18:55.

Brian -- THANKS !!! Well said, and needed to be said. Shame that most of the guys that need to hear it, are not on this group. I glad you included the "Q" signals. While I use them some on HF (mostly QSL? and QRZ?), it's always irritating to me when one of the local "radio nazis" will get after someone for using "10-4", but never say anything about "Q" code.

Anyway, well done and thanks..... Greg

I understand the USS Indianapolis will be on the air this weekend for the Museum Ships event. I forgot who I need to talk to about operating. I might be available for CW operations on Friday night or Saturday morning.

Anyone know who I need to contact?

Hi Brian,
Can I use this in the Spark Gap Newsletter?

So you've recently passed the test and you now have your brand new Amateur Radio license in hand. Congratulations on a job very well done, and I sincerely welcome you to the fraternity. I hope you learn more about radio and electronics over the next few years than you ever knew before. Now that you have a VHF or UHF rig at your disposal, let's briefly discuss some operating habits.

1. In amateur radio, we have names. Not handles, not personals, just names. I know, it's more fun sometimes to say things like handle and personal, but let's try to stick to names. Sometimes a new guy or gal will forget and that's OK, just try to remeber when in the amateur bands, we use our names, and our FCC issued call signs.

2. There is no word "destinated". "Roger that", "10-4" and "Motion Lotion" are not amateur radio terms either. Although I have been guilty of using all four of those at one time or another.

3. Amateur Radio operators learn a standard set of phonetics for the English alphabet. You needed to know them for your test, so why not use them on the air like you're supposed to. Do you break the law by saying Big Violet Nighties instead of Bravo Victor November? I don't think so but it's not what other radio amateurs are expecting. Sometimes cute phonetics can cost you a nice DX contact because they can't understand what you're saying.
